INUNDATION MATRIX

HURRICANE FORWARD SPEED (MPH)

	0-20	21-40	41+
HURRICANE CATEGORY	182	182	182
3	182	182	182
4	182	182	182

HURRICANE INUNDATION AREAS

- Inundation Area A
- Inundation Area B
- Inundation Area C

NOTES:

- Inundation areas were derived from the National Hurricane Center's application of the SLOSH (Sea, Lake and Overland Surges from Hurricanes) model. Inundation areas reflect "WORST CASE" combination of hurricane direction, forward speed, landfall point, and top environmental tide.
- Hurricane categories 1 through 4 refer to the Saffir-Simpson scale of hurricane intensity.
- Shaded land area represent areas with coastal flooding potential from hurricanes of the category and forward speed referenced by the inundation matrix shown above. Inland areas that may only be subjected to freshwater flooding are not shaded.
- "WORST CASE" hurricane surge elevations determined for each inundation area are given in the surge tide profiles provided on page 11.
