TABLE 3-7.3
CALCULATION OF CHEMICAL CANCER RISKS AND NON-CANCER HAZARDS - TRESPASSER
REASONABLE MAXIMUM EXPOSURE
HUMAN HEALTH RISK ASSESSMENT
BLUE BEACH DISPOSAL AREA
NORTH KINGSTOWN, RHODE ISLAND

Scenario Timeframe: Current/Future; Future
Receptor Population: Trespasser
Receptor Age: Adolescent (ages 7-<16)

							Cancer Risk Calculations						Noncancer Hazard Calculations				
					EPC		Intake/Exposure Concentration		CSF or IUR				Intake/Exposure Concentration		RfD or RfC		
Medium	Exposure Medium	Exposure Point	Exposure Route	Chemical of Potential Concern	Value	Units	Value	Units	Value	Units	ADAF [1]	Cancer Risk	Value	Units	Value	Units	Hazard Quotient

Notes:
< = less than.
ADAF = Age-dependent adjustment factor.
CSF = Cancer slope factor.
EPC = Exposure point concentration.
IUR = Inhalation unit risk factor.
N/A = Not applicable.
NHL = Non-Hodgkin's lymphoma.
PCBs = Polychlorinated biphenyls.
RfC = Inhalation reference concentration.
RfD = Oral reference dose.
RME = Reasonable Maximum Exposure.
SVOCs = Semivolatile organic compounds.
VOCs = Volatile organic compounds.
(1) ADAF is used for chemicals with a mutagenic mode of action for carcinogenesis. The cancer risk is adjusted by multiplying the calculated risk by the ADAF.
(2) Presented on corresponding summary of risk/hazard table.

Total Receptor Risk/Hazard												(2)					(2)

Notes:
ADAF = Age-dependent adjustment factor.
CSF = Cancer slope factor.
EPC = Exposure point concentration.
IUR = Inhalation unit risk factor.
N/A = Not applicable.
PCBs = Polychlorinated biphenyls.
RfC = Inhalation reference concentration.
RfD = Oral reference dose.
RME = Reasonable Maximum Exposure.
SVOCs = Semivolatile organic compounds.
VOCs = Volatile organic compounds.
(1) ADAF is used for chemicals with a mutagenic mode of action for carcinogenesis. The cancer risk is adjusted by multiplying the calculated risk by the ADAF.
A combined, age-weighted ADAF of 5.3 [$ADAF_{0-<2\ years}$ (10) × (2 years/6 years) + $ADAF_{2-<6\ years}$ (3) × (4 years/6 years)] is used.
(2) Presented on corresponding summary of risk/hazard table.

Total Receptor Risk/Hazard												(2)					(2)

Notes:
ADAF = Age-dependent adjustment factor.
CSF = Cancer slope factor.
EPC = Exposure point concentration.
IUR = Inhalation unit risk factor.
N/A = Not applicable.
NHL = Non-Hodgkin's lymphoma.
PCBs = Polychlorinated biphenyls.
RfC = Inhalation reference concentration.
RfD = Oral reference dose.
RME = Reasonable Maximum Exposure.
SVOCs = Semivolatile organic compounds.
VOCs = Volatile organic compounds.
(1) ADAF is used for chemicals with a mutagenic mode of action for carcinogenesis. The cancer risk is adjusted by multiplying the calculated risk by the ADAF. Does not apply to vinyl chloride; addressed based on CSF/IUR. Value for continuous exposure from birth used to evaluate the combined child/adult cancer risk. See report text for explanation.
(2) Presented on corresponding summary of risk/hazard table.

			Exp. Route Total									2E-04					3E+01
Groundwater Total												**5E-04**					**5E+01**
Total Receptor Risk/Hazard												(2)					(2)

Notes:
ADAF = Age-dependent adjustment factor.
CSF = Cancer slope factor.
EPC = Exposure point concentration.
IUR = Inhalation unit risk factor.
N/A = Not applicable.
NHL = Non-Hodgkin's lymphoma.
PCBs = Polychlorinated biphenyls.
RfC = Inhalation reference concentration.
RfD = Oral reference dose.
RME = Reasonable Maximum Exposure.
SVOCs = Semivolatile organic compounds.
VOCs = Volatile organic compounds.
(1) ADAF is used for chemicals with a mutagenic mode of action for carcinogenesis. The cancer risk is adjusted by multiplying the calculated risk by the ADAF.
A combined, age-weighted ADAF of 5.3 [$ADAF_{0-<2\ years}$ (10) × (2 years/6 years) + $ADAF_{2-<6\ years}$ (3) × (4 years/6 years)] is used.
The CSF/IUR for vinyl chloride account for mutagenic effects, therefore, application of the ADAFs is not necessary for evaluation of mutagenic mode of action.
(2) Presented on corresponding summary of risk/hazard table.

TABLE 3-9.9

SUMMARY OF RECEPTOR RISKS AND HAZARDS FOR COPCs - HYPOTHETICAL FUTURE RESIDENT (ON-PROJECT BLUE BEACH AREA SURFACE SOIL AND GROUNDWATER)

REASONABLE MAXIMUM EXPOSURE

HUMAN HEALTH RISK ASSESSMENT

BLUE BEACH DISPOSAL AREA

NORTH KINGSTOWN, RHODE ISLAND

Scenario Timeframe: Future
Receptor Population: Resident
Receptor Age: Adult and Child

Medium	Exposure Medium	Exposure Point	Chemical of Potential Concern	Carcinogenic Risk Young Child + Adult				Non-Carcinogenic Hazard Quotient Young Child				
				Ingestion	Inhalation	Dermal	Exposure Routes Total	Primary Target Organ	Ingestion	Inhalation	Dermal	Exposure Routes Total

Notes:

COPC = Chemical of potential concern.

HI = Hazard index.

HQ = Hazard quotient.

NHL = Non-Hodgkin's lymphoma.

N/A = Not applicable.

PCBs = Polychlorinated biphenyls.

RME = Reasonable Maximum Exposure.

SVOCs = Semivolatile organic compounds.

USEPA = United States Environmental Protection Agency.

VOCs = Volatile organic compounds.

Totals are calculated based on unrounded chemical-specific values.

Green shading indicates the receptor-specific cumulative potential risk and/or HI (per target endpoint) is greater than USEPA's target risk range of 1E-6 to 1E-4 or target HI of 1, respectively. For each associated exposure scenario (i.e., receptor/medium) with a potential risk/HI above USEPA's cumulative target risk/HI level, risk drivers were defined as COPCs with an individual risk > 1E-6 or HQ > 1 . These risk drivers are also highlighted.

Target Endpoint	**Total HI by Target Endpoint**
Total Blood HI =	3E-01
Total Decreased Body and Organ Weights =	1E+00
Total Developmental HI =	1E+01
Total Eye HI =	3E-01
Total Gastrointestinal HI =	4E+00
Total Immune HI =	1E+01
Total Kidney HI =	8E-01
Total Liver HI =	5E-02
Total Mortality HI =	3E-01
Total Musculoskeletal HI =	1E-03
Total Nails HI =	3E-01
Total Nervous System HI =	3E+01
Total None Reported HI =	5E-03
Total Respiratory HI =	2E+01
Total Skin HI =	5E-01
Total Thyroid HI =	7E-01
Total Vascular HI =	5E-01

TABLE 3-9.10

SUMMARY OF RECEPTOR RISKS AND HAZARDS FOR COPCs - HYPOTHETICAL FUTURE RESIDENT (ON-PROJECT BLUE BEACH AREA SUBSURFACE SOIL AND GROUNDWATER)

REASONABLE MAXIMUM EXPOSURE

HUMAN HEALTH RISK ASSESSMENT

BLUE BEACH DISPOSAL AREA

NORTH KINGSTOWN, RHODE ISLAND

Scenario Timeframe: Future
Receptor Population: Resident
Receptor Age: Adult and Child

Medium	Exposure Medium	Exposure Point	Chemical of Potential Concern	Carcinogenic Risk Young Child + Adult				Non-Carcinogenic Hazard Quotient Young Child				
				Ingestion	Inhalation	Dermal	Exposure Routes Total	Primary Target Organ	Ingestion	Inhalation	Dermal	Exposure Routes Total

Notes:

COPC = Chemical of potential concern.

HI = Hazard index.

HQ = Hazard quotient.

N/A = Not applicable.

NHL = Non-Hodgkin's lymphoma.

PCBs = Polychlorinated biphenyls.

RME = Reasonable Maximum Exposure.

SVOCs = Semivolatile organic compounds.

USEPA = United States Environmental Protection Agency.

VOCs = Volatile organic compounds.

Totals are calculated based on unrounded chemical-specific values.

Green shading indicates the receptor-specific cumulative potential risk and/or HI (per target endpoint) is greater than USEPA's target risk range of 1E-6 to 1E-4 or target HI of 1, respectively. For each associated exposure scenario (i.e., receptor/medium) with a potential risk/HI above USEPA's cumulative target risk/HI level, risk drivers were defined as COPCs with an individual risk > 1E-6 or HQ > 1 . These risk drivers are also highlighted.

Target Endpoint	**Total HI by Target Endpoint**
Total Blood HI =	3E-01
Total Decreased Body and Organ Weights =	1E+00
Total Developmental HI =	1E+01
Total Eye HI =	1E-01
Total Gastrointestinal HI =	4E+00
Total Immune HI =	1E+01
Total Kidney HI =	8E-01
Total Liver HI =	5E-02
Total Mortality HI =	3E-01
Total Musculoskeletal HI =	1E-03
Total Nails HI =	1E-01
Total Nervous System HI =	3E+01
Total None Reported HI =	5E-03
Total Respiratory HI =	2E+01
Total Skin HI =	5E-01
Total Thyroid HI =	7E-01
Total Vascular HI =	5E-01

TABLE 3-11
SUMMARY OF RECEPTOR RISKS AND HAZARDS
REASONABLE MAXIMUM EXPOSURE
HUMAN HEALTH RISK ASSESSMENT
BLUE BEACH DISPOSAL AREA
NORTH KINGSTOWN, RHODE ISLAND

Exposure Point	Scenario/ Receptor	Exposure Media	Total Cancer Risks	Total Noncancer HI (a)	Media with Risk > 1E-04 or HI > 1	Major Contributors to Risk (> 1E-06, HQ > 1) (b)(c)

Notes:
> = Greater than.
HI = Hazard Index.
HQ = Hazard Quotient.
N/A = Not Applicable.
NC = Not Calculated; No chemicals of potential concern identified in this area.
USEPA = United States Environmental Protection Agency.
Bolded values indicate the receptor-specific cumulative potential risk and/or HI (per target endpoint) is greater than USEPA's target risk range of 1E-06 to 1E-04 or target HI of 1, respectively.
(a) The presented total noncancer HI is the combined total for all target endpoints. See Table 9s for the total HIs per target endpoint.
(b) Major contributors to risk are identified where the receptor-specific cumulative risk and/or total HI (per target endpoint) exceed USEPA target levels. Major contributors to risk are then defined per exposure scenario (i.e., RME/receptor/medium) as a chemical with an individual risk > 1E-06 or a HQ > 1 .
(c) Lead is identified as a risk driver in groundwater within the on-Project Blue Beach area for a hypothetical future on-Project resident scenario based on the exposure point concentration that exceeds the Safe Drinking Water Act (SDWA) action level.
(d) The associated exposure scenario assumes groundwater is used for potable use (as drinking water and for showering/bathing) under a hypothetical future scenario in which the environmental land-use restriction (ELUR) is removed and the area is redeveloped for residential use. An ELUR prohibiting residential use and potable use of groundwater within the on-Project Blue Beach Area has been recorded. This scenario was evaluated to represent an unlimited use/unrestricted exposure (UU/UE) scenario for informational purposes.

Notes:
All screening values reported in milligrams per kilogram (mg/kg).
HMW - High Molecular Weight.
LMW - Low Molecular Weight.
NV - No value identified.
PAH - Polycyclic Aromatic Hydrocarbon.
USEPA - United States Environmental Protection Agency.

Soil screening values were selected according to the following sources:

[a] - USEPA Soil Screening Levels (Eco-SSLs) derived in accordance with USEPA guidance (USEPA, 2005c) and available on-line

[b] - Oak Ridge National Laboratory (ORNL) terrestrial plant and invertebrate (earthworm) screening values (Efroymson, et al. 1997a, 1997b). Values for soil microorganisms and microbial processes (Efroymson et al. 1997b) were selected in cases when earthworm-based values are not available

[c] - National Oceanic and Atmospheric Administration (NOAA) Screening Quick Reference Table values (Buchman, 2008). Dutch Intervention Values (IV) and Target Values (TV).

[d] - USEPA Region 4 ecological screening value for soil (USEPA, 2018).

[e] - Value for toluene was used as a surrogate due to structural similarities.

[f] - Value provided is for total PCBs.

[g] - Value provided is for total HMW PAHs.

[h] - Value provided is for total LMW PAHs.

Notes:
NV - No value available.
Sediment screening values were selected according to the following hierarchy of sources:
[a] USEPA Region III BTAG sediment screening values (USEPA, 2006); and
[b] National Oceanic and Atmospheric Administration (NOAA) Screening Quick Reference Table values (Buchman, 2008).
Marine sediment ESVs were selected preferentially for the Off-Project Narragansett Bay and Beach Front Area. If marine values were not available, then freshwater screening values were selected from the above hierarchy.
For the Off-Project Red Maple Swamp/Tidal Stream area, the lower of the freshwater and marine ESVs was selected.
[c] Value for Total PCBs used as a surrogate due to structural similarities.
[d] Freshwater value selected when marine value not identified.
[e] Value for benzene used as a surrogate due to structural similarities.
[f] Value for fluorene used as a surrogate due to structural similarities.

Xylenes (Total)	19	[b]	USEPA R3 (Marine)	13	[b]	USEPA R3 (Freshwater)

Notes:
NV - No value available.
Marine and freshwater surface water screening values were selected according to the following hierarchy of sources:
[a] Chronic federal Ambient Water Quality Criteria (AWQC) (USEPA, 2020).
[b] USEPA Region III Biological Technical Assistance Group (BTAG) surface water screening values (USEPA, 2006a, b).
Marine surface water ESVs were selected preferentially for the Off-Project Narragansett Bay and Beach Front Area. If marine values were not available, then freshwater screening values were selected from the above hierarchy.
For the Off-Project Red Maple Swamp/Tidal Stream area, the lower of the freshwater and marine ESVs was selected.
[c] Value presented has been adjusted by a hardness of 183 mg/L, which is the average hardness for the Red Maple Swamp / tidal stream area.
[d] Value is for dissolved phase.
[e] Value is for hexavalent chromium (trivalent chromium value is higher).
[f] Freshwater value selected when marine value not identified.
[g] Value for benzene used as surrogate due to structural similarities.
[h] Value for trans1,2-dichloroethene used as a surrogate due to structural similarities.

Notes:

All results reported in milligrams per kilogram (mg/kg).
Gray shading indicates where chemical is eliminated as a COPC.
Orange shading identifies COPC with HQ > 1.
-- Not evaluated further (below ESV or consistent with background).
BTV - Background Threshold Value.
COPC - Chemical of Potential Concern.
EN - Essential Nutrient.
ESV - Ecological Screening Value.
ft - Feet.
HMW - High Molecular Weight.
HQ - Hazard Quotient (maximum detected concentration/ESV)
J - Analyte positively detected but value is an approximate concentration.
LMW - Low Molecular Weight.
NA - Not Applicable (does not apply to organic constituents).
NC - Not Calculated.
NCOPC - Not a COPC.
NE - Not Evaluated (background data not available).
NV - No Value.
PAH - Polycyclic Aromatic Hydrocarbon.

[a] Frequency of Detection: Total number of detects - Total number of samples.
[b] Ecological screening values are presented on Table 4-1.
[c] Total PCB results for the on-Project Blue Beach area are associated with soil samples collected from three sampling units (SUs) using an incremental sampling methodology (ISM). Summary statistics were calculated following resolution of triplicate ISM samples per SU with the SU-specific concentration equal to the 95 percent upper confidence limit (UCL) concentration (95% UCL) (calculated using the ISM calculator; Attachment C). The highest of the three SU-specific 95% UCLs, which is higher than the SU-specific maximum detected concentrations, is selected as a conservative concentration for purposes of COPC selection.
[d] Background Threshold Values are presented in Attachment D.
[e] Two-sample hypothesis test results comparing site and background data are presented in Attachment D.
[f] Geochmical evaluation is presented in Attachment D.
[g] Individual PAHs were not retained as COPCs. Due to the additive toxicity of PAHs, PAHs were only retained as COPCs based on the Total HMW or LMW PAH evaluations. Total HMW or LMW PAHs were not retained in this evaluation.

Notes:

All results reported in milligrams per kilogram (mg/kg).
Gray shading indicates where chemical is eliminated as a COPC.
Orange shading identifies COPC with HQ > 1.
-- Not evaluated further (below ESV or consistent with background).
BTV - Background Threshold Value.
COPC - Chemical of Potential Concern.
EN - Essential Nutrient.
ESV - Ecological Screening Value.
ft - Feet.
HMW - High Molecular Weight.
HQ - Hazard Quotient (maximum detected concentration/ESV)
J - Analyte positively detected but value is an approximate concentration.
LMW - Low Molecular Weight.
NA - Not Applicable (does not apply to organic constituents).
NC - Not Calculated.
NCOPC - Not a COPC.
NE - Not Evaluated (background data not available).
NV - No Value.
PAH - Polycyclic Aromatic Hydrocarbon.

[a] Frequency of Detection: Total number of detects - Total number of samples.
[b] Ecological screening values are presented on Table 4-1.
[c] Background Threshold Values are presented in Attachment D.
[d] Two-sample hypothesis test results comparing site and background data are presented in Attachment D.
[e] Geochmical evaluation is presented in Attachment D.
[f] Individual PCBs were not retained as COPCs. Due to the additive toxicity of PCBs, PCBs were only retained as COPCs based on the Total PCB evaluation. Total PCBs were retained as a COPC.

Notes:

All results reported in milligrams per kilogram (mg/kg).
Gray shading indicates where chemical is eliminated as a COPC.
Orange shading identifies COPC with HQ > 1.
-- Not evaluated further (below ESV or consistent with background).
BTV - Background Threshold Value.
COPC - Chemical of Potential Concern.
EN - Essential Nutrient.
ESV - Ecological Screening Value.
ft - Feet.
HMW - High Molecular Weight.
HQ - Hazard Quotient (maximum detected concentration/ESV)
J - Analyte positively detected but value is an approximate concentration.
LMW - Low Molecular Weight.
NA - Not Applicable (does not apply to organic constituents).
NC - Not Calculated.
NCOPC - Not a COPC.
NE - Not Evaluated (background data not available).
NV - No Value.
PAH - Polycyclic Aromatic Hydrocarbon.

[a] Frequency of Detection: Total number of detects - Total number of samples.
[b] Ecological screening values are presented on Table 4-1.
[c] Background Threshold Values are presented in Attachment D.
[d] Two-sample hypothesis test results comparing site and background data are presented in Attachment D.
[e] Geochmical evaluation is presented in Attachment D.
[f] Individual PAHs were not retained as COPCs. Due to the additive toxicity of PAHs, PAHs were only retained as COPCs based on the Total HMW or LMW PAH evaluations. Total HMW or LMW PAHs were not retained in this evaluation.
[g] Individual PCBs were not retained as COPCs. Due to the additive toxicity of PCBs, PCBs were only retained as COPCs based on the Total PCB evaluation. Total PCBs were retained as a COPC.

Notes:
All results reported in milligrams per kilogram (mg/kg).
Gray shading indicates where chemical is eliminated as a COPC.
Orange shading identifies COPC with HQ > 1.
-- Not evaluated further (below ESV or consistent with background).
BTV - Background Threshold Value.
COPC - Chemical of Potential Concern.
EN - Essential Nutrient.
ESV - Ecological Screening Value.
ft - Feet.
HMW - High Molecular Weight.
HQ - Hazard Quotient (maximum detected concentration/ESV)
J - Analyte positively detected but value is an approximate concentration.
LMW - Low Molecular Weight.
NA - Not Applicable (does not apply to organic constituents).
NC - Not Calculated.
NCOPC - Not a COPC.
NE - Not Evaluated (background data not available).
NV - No Value.
PAH - Polycyclic Aromatic Hydrocarbon.
[a] Frequency of Detection: Total number of detects - Total number of samples.
[b] Ecological screening values are presented on Table 4-2.
[c] Background Threshold Values are presented in Attachment D.
[d] Two-sample hypothesis test results comparing site and background data are presented in Attachment D.
[e] Geochemical evaluation is presented in Attachment D.
[f] Individual PAHs were not retained as COPCs. Due to the additive toxicity of PAHs, PAHs were only retained as COPCs based on the Total HMW or LMW PAH evaluations. Total HMW or LMW PAHs were not retained in this evaluation.
[g] Individual PCBs were not retained as COPCs. Due to the additive toxicity of PCBs, PCBs were only retained as COPCs based on the Total PCB evaluation. Total PCBs were retained as a COPC.

Silver	11.5	YES [b]	0.021	**1.8**	0.012	0.065	0.51	NO - consistent with background
Zinc	425	NO [c]	0.12	**1.5**	0.44	0.16	**1.1**	YES - HQ > 1 and not consistent with background
Organics								
Total HMW PAHs	4.4	YES [b]	0.025	0.87	0.30	0.32	**2.4**	NO - consistent with background
Total LMW PAHs	0.49	NE	0.0056	0.11	0.00071	0.00040	0.0030	NO - all HQs < 1
Total PCB Aroclors	0.48	NE	0.022	**2.7**	0.195	0.75	**6.1**	YES - HQ > 1 and background data not available

Notes:
Maximum EPCs for screening level evaluation represent maximum detected concentrations in surface soil from the on-project Blue Beach area. See Attachment G-1 for calculations.
Potential risk is calculated using the maximum detected concentrations and NOAEL-based TRVs.
HQs above 1 are bolded and highlighted.
COPCs were retained for the COPC refinement stage if HQs were above 1 and the COPC was not consistent with background.
COPC - Chemical of Potential Concern.
EPC - Exposure Point Concentration.
HMW - High Molecular Weight.
HQ - Hazard Quotient (Dose/TRV).
LMW - Low Molecular Weight.
NE - Not Evaluated.
NOAEL - No Observed Adverse Effect Level.
PAHs - Polycyclic Aromatic Hydrocarbons.
PCBs - Polychlorinated Biphenyls.
TRV - Toxicity Reference Value.

[a] Maximum concentrations were considered relative to the background threshold values (BTVs) identified for surface soil (BTVs are provided in Attachment D). In addition, the on-project Blue Beach surface soil dataset was evaluated in hypothesis testing relative to the background surface soil dataset (Attachment D) and a geochemical evaluation was conducted to assess whether inorganics were consistent with background geochemical conditions (Attachment D). None of these soil COPCs were eliminated based on the geohemical evaluation.
[b] COPC was consistent with background based on either BTV comparison or population comparisons.
[c] COPC was not consistent with background based on BTV comparison and population comparisons and geochemical evaluation (as applicable).
[d] HQs for mercury are based on a maximum detected concentration that is 37 times higher than the remaining soil concentrations. HQs based on the second highest mercury concentration are only above 1 for the American robin (HQ = 2.3).

TABLE 4-13

Silver	0.84	NO [e]	0.23	0.00085	0.0047	0.037	NO - all HQs < 1
Zinc	330	YES [b]	**2.6**	0.38	0.16	**1.1**	NO - consistent with background
Organics							
Total HMW PAHs	37	YES [d]	0.097	0.69	0.18	0.15	NO - all HQs < 1 and consistent with background
Total LMW PAHs	4.4	NO [e]	0.016	0.0028	0.00031	0.00024	NO - all HQs < 1
Total PCB Aroclors	2.3	NE	**3.7**	0.93	0.67	**4.7**	YES - HQ > 1 and background data not available

Notes:

Maximum EPCs for screening level evaluation represent maximum detected concentrations among the following off-Project datasets: surface soil from the off-Project Red Maple Swamp walking path, hydric surface soil from the off-Project Red Maple Swamp, and surface sediment from the off-Project tidal stream. See Attachment E-2 for calculations.

Potential risk is calculated using the maximum detected concentrations and NOAEL-based TRVs.

HQs above 1 are bolded and highlighted.

COPCs were retained for the COPC refinement stage if HQs were above 1 and the COPC was not consistent with background.

COPC - Chemical of Potential Concern.

EPC - Exposure Point Concentration.

HMW - High Molecular Weight.

HQ - Hazard Quotient (Dose/TRV).

LMW - Low Molecular Weight.

NE - Not Evaluated.

NOAEL - No Observed Adverse Effect Level.

PAHs - Polycyclic Aromatic Hydrocarbons.

PCBs - Polychlorinated Biphenyls.

TRV - Toxicity Reference Value.

[a] Maximum concentrations were considered relative to the background threshold values (BTVs) identified for sediment, surface hydric soil, and surface soil (BTVs are provided in Attachment D) and media concentrations from each dataset were evaluated in hypothesis testing relative to the background surface soil dataset (Attachment D). A geochemical evaluation was also conducted to assess whether inorganics were consistent with background geochemical conditions (Attachment D). COPCs were only eliminated if they were consistent with BTVs or background in all three media.

[b] COPC was consistent with background based on population comparison for soil and based on geochemical evaluation for sediment and hydric soil.

[c] COPC was consistent with background based on population comparisons for soil and sediment and based on geochemical evaluation for hydric soil.

[d] COPC was consistent with background based on comparison to the sediment BTV and based on population comparisons for soil and hydric soil.

[e] COPC was not consistent with background based on BTV comparison, population comparison and geochemical evaluation (as applicable).

Notes:
All results reported in milligrams per kilogram (mg/kg).
COPC - Chemical of Potential Concern.
EPC - Exposure Point Concentration.
ESV - Ecological Screening Value.
HQ - Hazard Quotient (maximum EPC/ESV). Hazard quotients greater than 1 are in bold and highlighted.
NC - Not Calculated.
NCOPC - Not a COPC.
NV - No Value.
UCL - Upper Confidence Limit.

[a] Surface soil COPCs were identified in Table 4-4 (on-project) and Table 4-5 (off-project).
[b] Frequency of Detection: Total number of detects - Total number of samples.
[c] The maximum EPC is the recommended UCL, or the maximum detected concentration if a UCL could not be calculated (Attachment G-3).
[d] Screening level plant and invertebrate ESVs are identified in Table 4-1.
[e] Refined ESVs were selected in the following hierarchy:
[1] Los Alamos National Laboratory (LANL) Ecorisk Database (Release 4.1) low effect ecological screening level for plants or invertebrates in soil.
[2] USEPA Soil Screening Levels (Eco-SSLs) derived for plants or invertebrates.
[3] USEPA Region 4 ecological screening values for plants or invertebrates in soil (USEPA, 2018).
[4] USEPA Region 4 Refinement Screening Value (RSV) for invertebrates in sediment (USEPA, 2018) were used when other ESVs were not identified.
[f] Total PCB results for the on-Project Blue Beach area are associated with soil samples collected from three sampling units (SUs) using an incremental sampling methodology (ISM).
Summary statistics were calculated following resolution of triplicate ISM samples per SU with the SU-specific concentration equal to the 95 UCL concentration.
The maximum EPC represents the area-wide weighted mean concentration calculated based on the three SU-specific UCLs (see Attachment C).
[g] Value for diethylphthalate selected as a surrogate due to structural similarities.
[h] Eliminated as a COPC due to low frequency of detection ($\leq$ 5% with more than 20 samples).

Notes:
All results reported in milligrams per kilogram (mg/kg).
COPC - Chemical of Potential Concern.
EPC - Exposure Point Concentration.
ESV - Ecological Screening Value.
HQ - Hazard Quotient (maximum EPC/ESV). Hazard quotients greater than 1 are in bold and highlighted.
NC - Not Calculated.
NCOPC - Not a COPC.
NV - No Value.
UCL - Upper Confidence Limit.

[a] Hydric soil COPCs were identified in Table 4-6.
[b] Frequency of Detection: Total number of detects - Total number of samples.
[c] The maximum EPC is the recommended UCL, or the maximum detected concentration if a UCL could not be calculated (Attachment G-3).
[d] Screening level plant and invertebrate ESVs are identified in Table 4-1.
[e] Refined ESVs were selected in the following hierarchy:
[1] Los Alamos National Laboratory (LANL) Ecorisk Database (Release 4.1) low effect ecological screening level for plants or invertebrates in soil.
[2] USEPA Soil Screening Levels (Eco-SSLs) derived for plants or invertebrates.
[3] USEPA Region 4 ecological screening values for plants or invertebrates in soil (USEPA, 2018).
[4] USEPA Region 4 Refinement Screening Value (RSV) for invertebrates in sediment (USEPA, 2018) were used when other ESVs were not identified.
[f] Value for phenol selected as a surrogate due to structural similarities.
[g] Further evaluation of PCBs in hydric soil is warranted for invertebrates (see Table 4-25).

Notes:
All results reported in milligrams per kilogram (mg/kg).
COPC - Chemical of Potential Concern.
EPC - Exposure Point Concentration.
ESV - Ecological Screening Value.
HQ - Hazard Quotient (maximum EPC/ESV). Hazard quotients greater than 1 are in bold and highlighted.
NCOPC - Not a COPC.
UCL - Upper Confidence Limit.

[a] Surface sediment COPCs were identified in Table 4-7 (off-Project Red Maple Swamp / Tidal Stream area) and Table 4-8 (off-Project Narragansett Bay and Beachfront area).
[b] Frequency of Detection: Total number of detects - Total number of samples.
[c] The maximum EPC is the recommended UCL, or the maximum detected concentration if a UCL could not be calculated (Attachment G-3).
[d] Screening level benthic invertebrate ESVs are identified in Table 4-2.
[e] Refined ESVs were selected in the following hierarchy:
[1] Lower of Probable Effect Concentration (freshwater PEC; MacDonald, et al., 2000) and Effects Range Median (marine ERM; Buchman, 2008).
[2] Probable Effect Level (PEL; Buchman, 2008).
[3] Region 4 Sediment Refinement Screening Value (RSV; USEPA, 2018).
[f] Further evaluation of PCBs in sediment is warranted for invertebrates (see Table 4-25).

[Sum SEM - AVS]/foc	umol/g_{oc}	28.9	9.2	22.2	14.6	9.0	0.21	7.1	-12.8	-43.8	10.0

Notes:
Silver concentration is divided by 2 in the Sum SEM calculation (USEPA, 2005).
AVS - Acid Volatile Sulfides.
f_{oc} - fraction organic carbon.
J - Estimated concentration.
mg/kg - milligram/kilogram.
NC - Not calculated due to non-detect AVS value.
SEM - Simultaneously Extracted Metals.
U - Not detected. Valye treated as a zero in calculation.
umol/g - micromole per gram.
umol/g_{oc} - micromole per gram organic carbon.
Bold text indicates Sum SEM / AVS is greater than 1 or Sum SEM - AVS is greater than 0.
USEPA (2005) guidance on metals bioavailability evaluates possible binding of metals by both AVS and organic matter and provides the following scale to evaluate whether or not the organic carbon binding phase (represented as fraction organic carbon or foc), in conjunction with the AVS, is affecting the bioavailability of divalent metals in sediments:

If the $(\sum SEM-AVS)/f_{oc}$ excess exceeds 3000 µmol/g_{oc}, the sediments are presumed to be "likely to be toxic";

If the $(\sum SEM-AVS)/f_{oc}$ excess is between 130 and 3,000 µmol/g_{oc}, predictions of effects are uncertain; and

If the $(\sum SEM-AVS)/f_{oc}$ excess is less than 130 µmol/g_{oc}, the sediments are presumed to "not likely" be toxic.

Statististical results -
[a] Indicates a statistically significant reduction ($p<0.05$) in the response relative to the corresponding response in the laboratory control sample.
[b] Indicates a statistically significant reduction ($p<0.05$) in the response relative to the corresponding response in the reference sample from location SED-321.
[c] Indicates a statistically significant reduction ($p<0.05$) in the response relative to the corresponding response in the reference sample from location SED-322.
[d] Indicates a statistically significant reduction ($p<0.05$) in the response relative to the corresponding response in the reference sample from location SED-323.
[e] Indicates a statistically significant reduction ($p<0.05$) in the response relative to the corresponding response in the reference sample from location SED-324.
[f] Indicates a statistically significant reduction ($p<0.05$) in the response relative to the corresponding response in the reference sample from location SED-325.
[*] Indicates that a statistical outlier was identified and the finding of statistical significance varied depending on whether the outlier was excluded or not. The results presented in this table conservatively identify differences. See Attachment H for laboratory report.

1 - Mean dry weight (i.e., growth) is determined as mean dry weight divided by the number of organisms at test termination.
2 - Mean biomass is determined as mean dry weight divided by the number of organisms at test initiation.
3 - Juvenile production per surviving amphipod.
4 - Juvenile production per surviving female amphipod.

Notes:
Invertebrates identified and metrics calculated by Normandeau Associates, Inc. (see Attachment I) unless otherwise noted.
[a] Total number of taxa.
[b] Estimate of the total number of specimens in each sample based on the percentage of matrix processed
[c] Function of the number of species in a sample and the distribution of indiviuals.
[d] Matrices were processed in entirety but did not contain at least 80 specimens. Metrics were calculated by Normandeau Associates, Inc. bu not presented for use due to low number of specimens.
[e] Metric calculated by AECOM using individual counts and tolerance values identified by Normandeau Associates, Inc. Values range from 0 with higher values reflecting a more pollution tolerant invertebrate community.

Notes:
All results reported in micrograms per liter (ug/L)
COPC - Chemical of Potential Concern.
EPC - Exposure Point Concentration.
ESV - Ecological Screening Value.
HQ - Hazard Quotient (maximum EPC/ESV). Hazard quotients greater than 1 are in bold and highlighted.
NCOPC - Not a COPC.
UCL - Upper Confidence Limit.

[a] Surface water COPCs were identified in Table 4-9.
[b] Frequency of Detection: Total number of detects - Total number of samples.
[c] The maximum EPC is the recommended UCL, or the maximum detected concentration if a UCL could not be calculated (Attachment G-3).
[d] Screening level aquatic ESVs are identified in Table 4-2.
[e] Refined ESVs were selected in the following hierarchy:
[1] Acute federal Ambient Water Quality Criteria (AWQC) (USEPA, 2020)
[2] USEPA Region 4 Acute Screening Value (USEPA, 2018)
For the Off-Project Red Maple Swamp/tidal marsh, the lower of available freshwater and marine ESVs were selected.

Lead	2 - 20	10%	20.8 Maximum	5.6	**3.7**	140 AWQC (marine)	0.15	NCOPC

Notes:
All results reported in micrograms per liter (ug/L)
COPC - Chemical of Potential Concern.
EPC - Exposure Point Concentration.
ESV - Ecological Screening Value.
HQ - Hazard Quotient (maximum EPC/ESV). Hazard quotients greater than 1 are in bold and highlighted.
NCOPC - Not a COPC.
UCL - Upper Confidence Limit.

[a] Porewater COPCs were identified in Table 4-10 (off-project Red Maple Swamp / Tidal Stream area) and Table 4-11 (off-project Narragansett Bay and Beachfront area).
[b] Frequency of Detection: Total number of detects - Total number of samples.
[c] The maximum EPC is the recommended UCL, or the maximum detected concentration if a UCL could not be calculated (Attachment G-3).
[d] Screening level aquatic ESVs are identified in Table 4-2.
[e] Refined ESVs were selected in the following hierarchy:
[1] Acute federal Ambient Water Quality Criteria (AWQC) (USEPA, 2020);
[2] USEPA Region 4 Acute Screening Value (USEPA, 2018).
Marine surface water ESVs were preferentially selected for the Off-Project Narragansett Bay and Beach Front Area. If marine values were not available, then freshwater screening values were selected from the above hierarchy. For the Off-Project Red Maple Swamp/Tidal Stream Area, the lower of the freshwater and marine ESVs were selected.
[f] Value presented has been adjusted by a hardness of 183 mg/L, which is the average hardness for the Red Maple Swamp / tidal stream area.
[g] Eliminated as a COPC due to low frequency of detection ($\leq$ 5% with more than 20 samples).

TABLE 4-23
SUMMARY OF REFINED FOOD WEB HQs IN THE ON-PROJECT BLUE BEACH AREA
ECOLOGICAL RISK ASSESSMENT
BLUE BEACH DISPOSAL AREA
NORTH KINGSTOWN, RHODE ISLAND

	NOAEL-based HQs - Maximum EPC		
COPC	**American Robin**	**Raccoon**	**Short-tailed Shrew**
Inorganics			
Cadmium	**1.6**	0.016	**2.6**
Copper	0.82	0.0044	0.47

Zinc	0.38	0.0013	0.19
Organics			
Total PCB Aroclors	0.17	0.0024	0.40

Notes:
Maximum EPCs represent the 95% upper confidence limit (UCL) on the arithmetic mean.
PCB soil data are from incremental sampling and the EPC represents the area-wide weighted mean concentration calculated based on three sampling unit-specific UCLs.
Potential risk is calculated using the maximum EPC and both NOAEL-and LOAEL-based TRVs (Attachment G-4).
HQs above 1 are bolded and highlighted.

COPC - Chemical of Potential Concern.
EPC - Exposure Point Concentration.
HQ - Hazard Quotient (Dose/TRV).
LOAEL - Lowest Observed Adverse Effect Level.
NOAEL - No Observed Adverse Effect Level.
PCBs - Polychlorinated Biphenyls.
TRV - Toxicity Reference Value.

Notes:

Maximum EPCs represent the 95% upper confidence limit (UCL) on the arithmetic mean from the following off-Project datasets: surface soil from the off-Project Red Maple Swamp walking path, hydric surface soil from the off-Project Red Maple Swamp, and surface sediment from the off-Project tidal stream. See Attachment G-5 for calculations.

Potential risk is calculated using the maximum EPC and both NOAEL-and LOAEL-based TRVs.

HQs above 1 are bolded and highlighted.

COPC - Chemical of Potential Concern.

HQ - Hazard Quotient (Dose/TRV).

LMW - Low Molecular Weight.

NOAEL - No Observed Adverse Effect Level.

PCBs - Polychlorinated Biphenyls.

TRV - Toxicity Reference Value.

Notes:

Shading indicates PEC-Q, ERM-Q, or HQ above 1.
ERM - Effects Range-Median (Buchman, 2008). ERM for Total PCBs in marine sediment is 0.18 mg/kg.
ERM-Q - ERM-quotient (concentration/ERM).
HQ - Hazard Quotient (maximum EPC/ESV). Hazard quotients greater than 1 are in bold and highlighted.
NA - Not Analyzed.
PEC - Probable Effect Concentration (PEC; MacDonald, et al., 2000). PEC for Total PCBs is 0.676 mg/kg.
PEC-Q - PEC-Quotient (concentration/PEC)
TOC - Total Organic Carbon.
U - Not detected at the specified limit.

[a] Sediment quality benchmark presented in Table 5 of Finkelstein, et al. (2017) is adjusted to reflect sample-specific TOC.
Average TOC is used used when sample-specific TOC is not available.

		Finkelstein, et al. (2017) Sediment Quality Benchmarks (mg/kg OC)	
		10% injury	20% injury
		50.43	89.0
	Average TOC (%)	Adjusted to mg/kg using site specific TOC	
Default	1	0.50	0.89
Sediment Average	9.3	4.7	8.3
Hydric Soil Average	19.0	9.6	16.9

mg/kg OC - milligram per kilogram organic carbon

TABLE 4-26
REFERENCE ENVELOPE COMPARISONS FOR SEDIMENT QUALITY TRIAD COMPONENTS - OFF-PROJECT RED MAPLE SWAMP / TIDAL STREAM AREA
ECOLOGICAL RISK ASSESSMENT
BLUE BEACH DISPOSAL AREA
NORTH KINGSTOWN, RHODE ISLAND

	Sediment Chemistry		Sediment Toxicity		Macroinvertebrate Community						
	Mean of Total PAHs, Total PCBs, and Mean Metals PEC-Qs	Mean of Total PAHs, Total PCBs, and Mean Metals ERM-Qs	Mean Biomass (mg)	Mean Juveniles per Surviving Amphipod	Total Richness	Total Density	Hilsenhoff Biotic Index	Summary of Responses			
Reference Envelope Value	**0.83**	**0.73**	**0.61**	**0.62**	**4**	**10**	**9.4**	**Sediment Contamination**	**Toxicity**	**Benthic Alteration**	**Interpretation of Responses**
SED-331	0.48	1.1	0.70	0.38	7	372	8.7	+	+	-	Toxic chemicals are stressing the system
SED-333	0.19	0.37	0.94	1.9	13	121	7.2	-	-	-	Strong evidence that there is no pollution induced degradation
SED-335	1.3	3.1	0.45	0.27	11	672	6.6	+	+	-	Toxic chemicals are stressing the system
SED-337	0.32	0.61	1.4	3.8	4	84	9.8	-	-	+	Alteration is not due to toxic chemicals
SED-339	0.077	0.20	0.63	0.34	15	175	7.3	-	+	-	Unmeasured chemicals or conditions exist with the potential to cause degradation.

Notes:
Shading indicates a response outside the reference envelope.
A result above the reference envelope is assigned a + (impacted) for these endpoints: mean PEC-Qs, mean ERM-Qs, and HBI.
A result below the reference envelope is assigned a + (impacted) for these endpoints: biomass and juveniles per amphipod endpoints from the toxicity tests, total richness, and total density.

PEC-Q - Probable Effect Concentration Quotient (freshwater benchmark evaluation).
ERM-Q - Effects Range Median Quotient (marine benchmark evaluation).

In the summary of responses for each triad component:
+ Indicates response was outside the reference envelope for at least one endpoint.
- Indicates response was within the reference envelope for all endpoints.
Interpretation of triad responses (Chapman, 1992).

Outcome Number	Sediment Contamination	Toxicity	Benthic Alteration	Possible Conclusions
1	+	+	+	Strong evidence for pollution-induced degradation
2	-	-	-	Strong evidence that there is no pollution induced degradation
3	+	-	-	Chemicals are not bioavailable
4	-	+	-	Unmeasured chemicals or conditions exist with the potential to cause degradation
5	-	-	+	Alteration is not due to toxic chemicals
6	+	+	-	Toxic chemicals are stressing the system
7	-	+	+	Unmeasured toxic chemicals are causing degradation
8	+	-	+	Chemicals are not bioavailable or alteration is not due to toxic chemicals

Barium - total	2 - 20	10%	34 Maximum	0.31	NCOPC
Lead - total	2 - 20	10%	21 Maximum	0.15	NCOPC

Notes:
COPC - Chemical of Potential Concern.
EPC - Exposure Point Concentration.
HQ - Hazard Quotient (EPC/ ESV or Dose/TRV).
LOAEL - Lowest Observed Adverse Effect Level.
NC - Not Calculated (ESV not available).
NCOPC - Not a COPC.
NOAEL - No Observed Adverse Effect Level.
PCBs - Polychlorinated Biphenyls.
TRV - Toxicity Reference Value.
UCL - Upper Confidence Limit.

Hazard Quotients calculated in refinement screening Tables 4-15, 4-16, 4-17, 4-21, and 4-22 and food webs summarized in Tables 4-23 and 4-24. Hazard quotients greater than 1 are in bold and highlighted.
[a] Frequency of Detection: Total number of detects - Total number of samples.
[b] The maximum EPC is the recommended UCL, or the maximum detected concentration if a UCL could not be calculated (Attachment C).
[c] Eliminated as a COPC due to low frequency of detection ≤ 5% with at least 20 samples).
[d] Eliminated as a COPC following sample-by-sample evaluation of PCBs in sediment and hydric soil in the off-Project Red Maple Swamp/tidal stream area (see Table 4-25).
[e] See discussion of surface water chronic ESVs and detected concentrations in Sections 4.6.4.2 and 4.6.4.3 for additional rationale for eliminating surface water and porewater COPCs from further evaluation.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Method Analyte Group	Compound	CAS #	Units									

PCB = Polychlorinated Biphenyl.
SO = Soil.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
(a) Associated total results were calculated as described in the risk assessment report text.

Method Analyte Group	Compound	CAS #	Units										

PCB = Polychlorinated Biphenyl.
SO = Soil.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Method Analyte Group	Compound	CAS #	Units								

Notes:
B = Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
HS = Hydric soil.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
EPH = Extractable Petroleum Hydrocarbons.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SIM = Selected ion monitoring.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
VPH = Volatile Petroleum Hydrocarbons.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
VOC = Volatile organic compound.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
% = Percent.
AVS-SEM = Acid volatile sulfide and simultaneoulsy extracted metals.
CAS = Chemical Abstracts Service.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
UMOL/G = Micromole per gram.
VOC = Volatile organic compound.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
% = Percent.
AVS-SEM = Acid volatile sulfide and simultaneoulsy extracted metals.
CAS = Chemical Abstracts Service.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
UMOL/G = Micromole per gram.
VOC = Volatile organic compound.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
% = Percent.
AVS-SEM = Acid volatile sulfide and simultaneoulsy extracted metals.
CAS = Chemical Abstracts Service.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
UMOL/G = Micromole per gram.
VOC = Volatile organic compound.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
% = Percent.
AVS-SEM = Acid volatile sulfide and simultaneoulsy extracted metals.
CAS = Chemical Abstracts Service.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
UMOL/G = Micromole per gram.
VOC = Volatile organic compound.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

RA_SE_VOCs	Vinyl Chloride	75-01-4	mg/kg	

Notes:
% = Percent.
AVS-SEM = Acid volatile sulfide and simultaneoulsy extracted metals.
CAS = Chemical Abstracts Service.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
UMOL/G = Micromole per gram.
VOC = Volatile organic compound.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Method Analyte Group	Compound	CAS #	Units							

CAS = Chemical Abstracts Service.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SE = Sediment.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
UMOL/G = Micromole per gram.
VOC = Volatile organic compound.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Method Analyte Group	Compound	CAS #	Units							

CAS = Chemical Abstracts Service.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
mg/kg = Milligrams per kilogram.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
SE = Sediment.
SVOC = Semivolatile organic compound.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
UMOL/G = Micromole per gram.
VOC = Volatile organic compound.
(a) Lab calculated value; not utilized in the risk assessment.
(b) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Notes:
CAS = Chemical Abstracts Service.
D = Dissolved/filtered.
FD = Field duplicate.
ft = Feet.
J = The chemical was positively identified; however, the associated numerical value is an estimated concentration.
N = Normal sample.
PCB = Polychlorinated Biphenyl.
T = Total/unfiltered.
U = Not detected above the reported limit of detection (LOD).
UJ = The analyte was not detected; and the reporting limit is approximate.
ug/l = Micrograms per liter.
VOC = Volatile organic compound.
(a) Associated total results were calculated as described in the risk assessment report text.

Suggested UCL to Use

95% H-UCL	0.38

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

ProUCL computes and outputs H-statistic based UCLs for historical reasons only.
H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.
It is therefore recommended to avoid the use of H-statistic based 95% UCLs.
Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.

nu hat (MLE)	33.02	nu star (bias corrected)	30.54
Mean (detects)	1.008		

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	0.971
Maximum	12	Median	0.292
SD	2.28	CV	2.348

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Warning: Data set has only 3 Detected Values.
This is not enough to compute meaningful or reliable statistics and estimates.

Note: Sample size is small (e.g., <10), if data are collected using ISM approach, you should use
guidance provided in ITRC Tech Reg Guide on ISM (ITRC, 2012) to compute statistics of interest.
For example, you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options of ProUCL 5.1

Gamma GOF Tests on Detected Observations Only

A-D Test Statistic	2.828	Anderson-Darling GOF Test	
5% A-D Critical Value	0.802	Detected Data Not Gamma Distributed at 5% Significance Level	
K-S Test Statistic	0.291	Kolmogorov-Smirnov GOF	
5% K-S Critical Value	0.18	Detected Data Not Gamma Distributed at 5% Significance Level	

Detected Data Not Gamma Distributed at 5% Significance Level

Gamma Statistics on Detected Data Only

k hat (MLE)	0.571	k star (bias corrected MLE)	0.531
Theta hat (MLE)	0.492	Theta star (bias corrected MLE)	0.529
nu hat (MLE)	29.71	nu star (bias corrected)	27.61
Mean (detects)	0.281		

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	0.271
Maximum	3.75	Median	0.085
SD	0.728	CV	2.688
k hat (MLE)	0.551	k star (bias corrected MLE)	0.514

KM SD (logged)	1.191	95% Critical H Value (KM-Log)	2.78
KM Standard Error of Mean (logged)	0.234		

DL/2 Statistics

DL/2 Normal		DL/2 Log-Transformed	
Mean in Original Scale	0.271	Mean in Log Scale	-2.418
SD in Original Scale	0.728	SD in Log Scale	1.228
95% t UCL (Assumes normality)	0.51	95% H-Stat UCL	0.374

DL/2 is not a recommended method, provided for comparisons and historical reasons

Nonparametric Distribution Free UCL Statistics

Detected Data appear Approximate Lognormal Distributed at 5% Significance Level

Suggested UCL to Use

KM H-UCL	0.351

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs
GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)
For such situations, GROS method may yield incorrect values of UCLs and BTVs
This is especially true when the sample size is small.
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.0018	Mean	0.156
Maximum	2.58	Median	0.01
SD	0.549	CV	3.525
k hat (MLE)	0.287	k star (bias corrected MLE)	0.282
Theta hat (MLE)	0.542	Theta star (bias corrected MLE)	0.552
nu hat (MLE)	21.26	nu star (bias corrected)	20.87
Adjusted Level of Significance (β)	0.0431		
Approximate Chi Square Value (20.87, α)	11.5	Adjusted Chi Square Value (20.87, β)	11.19
95% Gamma Approximate UCL (use when n>=50)	0.283	95% Gamma Adjusted UCL (use when n<50)	0.29

Estimates of Gamma Parameters using KM Estimates			
Mean (KM)	0.149	SD (KM)	0.543
Variance (KM)	0.295	SE of Mean (KM)	0.0947

DL/2 is not a recommended method, provided for comparisons and historical reasons

Nonparametric Distribution Free UCL Statistics

Detected Data appear Approximate Lognormal Distributed at 5% Significance Level

Suggested UCL to Use

97.5% KM (Chebyshev) UCL	0.741

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Off-Project Red Maple Swamp/Tidal Stream Area Subsurface Soil

UCL Statistics for Data Sets with Non-Detects

User Selected Options

Date/Time of Computation	ProUCL 5.110/2/2020 8:46:44 AM
From File	Input_SubsurfSoil_a.xls
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

RA_SO_Metals|Arsenic|mg/kg

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	23
Minimum	2.9	Mean	4.467
Maximum	7.6	Median	3.65
SD	1.857	Std. Error of Mean	0.758
Coefficient of Variation	0.416	Skewness	1.199

Note: Sample size is small (e.g., <10), if data are collected using ISM approach, you should use
guidance provided in ITRC Tech Reg Guide on ISM (ITRC, 2012) to compute statistics of interest.
For example, you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options of ProUCL 5.1

Normal GOF Test

Shapiro Wilk Test Statistic	0.844	Shapiro Wilk GOF Test	
5% Shapiro Wilk Critical Value	0.788	Data appear Normal at 5% Significance Level	
Lilliefors Test Statistic	0.266	Lilliefors GOF Test	
5% Lilliefors Critical Value	0.325	Data appear Normal at 5% Significance Level	

Data appear Normal at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	5.994	95% Adjusted-CLT UCL (Chen-1995)	6.11
		95% Modified-t UCL (Johnson-1978)	6.056

Gamma GOF Test

A-D Test Statistic	0.468	Anderson-Darling Gamma GOF Test	
5% A-D Critical Value	0.698	Detected data appear Gamma Distributed at 5% Significance Level	
K-S Test Statistic	0.255	Kolmogorov-Smirnov Gamma GOF Test	
5% K-S Critical Value	0.333	Detected data appear Gamma Distributed at 5% Significance Level	

Detected data appear Gamma Distributed at 5% Significance Level

Gamma Statistics

k hat (MLE)	7.94	k star (bias corrected MLE)	4.081
Theta hat (MLE)	0.563	Theta star (bias corrected MLE)	1.095
nu hat (MLE)	95.28	nu star (bias corrected)	48.97
MLE Mean (bias corrected)	4.467	MLE Sd (bias corrected)	2.211
		Approximate Chi Square Value (0.05)	33.91
Adjusted Level of Significance	0.0122	Adjusted Chi Square Value	29.45

Assuming Gamma Distribution

95% Approximate Gamma UCL (use when n>=50))	6.451	95% Adjusted Gamma UCL (use when n<50)	7.428

Lognormal GOF Test

Shapiro Wilk Test Statistic	0.887	Shapiro Wilk Lognormal GOF Test	
5% Shapiro Wilk Critical Value	0.788	Data appear Lognormal at 5% Significance Level	
Lilliefors Test Statistic	0.234	Lilliefors Lognormal GOF Test	
5% Lilliefors Critical Value	0.325	Data appear Lognormal at 5% Significance Level	

Data appear Lognormal at 5% Significance Level

Lognormal Statistics

Minimum of Logged Data	1.065	Mean of logged Data	1.432
Maximum of Logged Data	2.028	SD of logged Data	0.381

Off-Project Red Maple Swamp/Tidal Stream Area Subsurface Soil

Assuming Lognormal Distribution

95% H-UCL	6.758	90% Chebyshev (MVUE) UCL	6.525
95% Chebyshev (MVUE) UCL	7.466	97.5% Chebyshev (MVUE) UCL	8.772
99% Chebyshev (MVUE) UCL	11.34		

Nonparametric Distribution Free UCL Statistics
Data appear to follow a Discernible Distribution at 5% Significance Level

Nonparametric Distribution Free UCLs

95% CLT UCL	5.713	95% Jackknife UCL	5.994
95% Standard Bootstrap UCL	5.624	95% Bootstrap-t UCL	8.674
95% Hall's Bootstrap UCL	13.26	95% Percentile Bootstrap UCL	5.683
95% BCA Bootstrap UCL	5.917		
90% Chebyshev(Mean, Sd) UCL	6.74	95% Chebyshev(Mean, Sd) UCL	7.77
97.5% Chebyshev(Mean, Sd) UCL	9.2	99% Chebyshev(Mean, Sd) UCL	12.01

Suggested UCL to Use

95% Student's-t UCL	5.994

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Off-Project Red Maple Swamp/Tidal Stream Area Subsurface Soil

Suggested UCL to Use

95% KM (t) UCL	3.17

When a data set follows an approximate (e.g., normal) distribution passing one of the GOF test
When applicable, it is suggested to use a UCL based upon a distribution (e.g., gamma) passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

nu hat (MLE)	89.1	nu star (bias corrected)	52.25
Mean (detects)	0.158		

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.0171	Mean	0.123
Maximum	0.266	Median	0.12
SD	0.0809	CV	0.66
k hat (MLE)	2.15	k star (bias corrected MLE)	1.571

Nonparametric Distribution Free UCL Statistics

Detected Data appear Approximate Normal Distributed at 5% Significance Level

Suggested UCL to Use

95% KM (t) UCL	0.174

When a data set follows an approximate (e.g., normal) distribution passing one of the GOF test
When applicable, it is suggested to use a UCL based upon a distribution (e.g., gamma) passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

K-S Test Statistic	0.312	Kolmogorov-Smirnov GOF	
5% K-S Critical Value	0.358	Detected data appear Gamma Distributed at 5% Significance Level	

Detected data appear Gamma Distributed at 5% Significance Level

Gamma Statistics on Detected Data Only

k hat (MLE)	4.078	k star (bias corrected MLE)	1.765
Theta hat (MLE)	0.0243	Theta star (bias corrected MLE)	0.0562
nu hat (MLE)	40.78	nu star (bias corrected)	17.65
Mean (detects)	0.0992		

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.029	Mean	0.079
Maximum	0.132	Median	0.0744
SD	0.038	CV	0.48
k hat (MLE)	4.281	k star (bias corrected MLE)	3.063

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs
GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)
For such situations, GROS method may yield incorrect values of UCLs and BTVs
This is especially true when the sample size is small.
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	0.438

Nonparametric Distribution Free UCL Statistics

Detected Data appear Approximate Normal Distributed at 5% Significance Level

Suggested UCL to Use

95% KM (t) UCL	2.943

When a data set follows an approximate (e.g., normal) distribution passing one of the GOF test
When applicable, it is suggested to use a UCL based upon a distribution (e.g., gamma) passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

On-Project Blue Beach Area Groundwater

Suggested UCL to Use
95% Adjusted Gamma UCL 4157

Recommended UCL exceeds the maximum observation

When a data set follows an approximate (e.g., normal) distribution passing one of the GOF test
When applicable, it is suggested to use a UCL based upon a distribution (e.g., gamma) passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

97.5% KM Chebyshev UCL	1.727	99% KM Chebyshev UCL	2.546

Gamma GOF Tests on Detected Observations Only

Not Enough Data to Perform GOF Test

Gamma Statistics on Detected Data Only

k hat (MLE)	0.74	k star (bias corrected MLE)	N/A
Theta hat (MLE)	1.145	Theta star (bias corrected MLE)	N/A
nu hat (MLE)	4.438	nu star (bias corrected)	N/A
Mean (detects)	0.847		

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs
GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)
For such situations, GROS method may yield incorrect values of UCLs and BTVs
This is especially true when the sample size is small.
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	0.438
Maximum	2.22	Median	0.2
SD	0.661	CV	1.511
k hat (MLE)	0.523	k star (bias corrected MLE)	0.441
Theta hat (MLE)	0.837	Theta star (bias corrected MLE)	0.993
nu hat (MLE)	11.5	nu star (bias corrected)	9.7
Adjusted Level of Significance (β)	0.0278		
Approximate Chi Square Value (9.70, α)	3.755	Adjusted Chi Square Value (9.70, β)	3.176

KM Standard Error of Mean (logged)	0.347		

DL/2 Statistics

DL/2 Normal		DL/2 Log-Transformed	
Mean in Original Scale	0.413	Mean in Log Scale	-1.275
SD in Original Scale	0.601	SD in Log Scale	0.723
95% t UCL (Assumes normality)	0.741	95% H-Stat UCL	0.643

DL/2 is not a recommended method, provided for comparisons and historical reasons

Nonparametric Distribution Free UCL Statistics

Detected Data appear Normal Distributed at 5% Significance Level

Suggested UCL to Use

95% KM (t) UCL	0.748

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

On-Project Blue Beach Area Shallow Groundwater

Suggested UCL to Use
95% Adjusted Gamma UCL 4157

Recommended UCL exceeds the maximum observation

When a data set follows an approximate (e.g., normal) distribution passing one of the GOF test
When applicable, it is suggested to use a UCL based upon a distribution (e.g., gamma) passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

When a data set follows an approximate (e.g., normal) distribution passing one of the GOF test
When applicable, it is suggested to use a UCL based upon a distribution (e.g., gamma) passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

DL/2 is not a recommended method, provided for comparisons and historical reasons

Nonparametric Distribution Free UCL Statistics

Detected Data appear Approximate Normal Distributed at 5% Significance Level

Suggested UCL to Use

95% KM (t) UCL	0.441

When a data set follows an approximate (e.g., normal) distribution passing one of the GOF test
When applicable, it is suggested to use a UCL based upon a distribution (e.g., gamma) passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

UCL Statistics for Data Sets with Non-Detects

User Selected Options

Date/Time of Computation	ProUCL 5.19/30/2020 11:42:36 AM
From File	UCL_Input_a.xls
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

RA_SO_Metals|Antimony|mg/kg

General Statistics

Total Number of Observations	27	Number of Distinct Observations	25
		Number of Missing Observations	0
Minimum	0.028	Mean	0.285
Maximum	3.14	Median	0.098
SD	0.61	Std. Error of Mean	0.117
Coefficient of Variation	2.14	Skewness	4.329

Normal GOF Test

Shapiro Wilk Test Statistic	0.408	Shapiro Wilk GOF Test
5% Shapiro Wilk Critical Value	0.923	Data Not Normal at 5% Significance Level
Lilliefors Test Statistic	0.337	Lilliefors GOF Test
5% Lilliefors Critical Value	0.167	Data Not Normal at 5% Significance Level

Data Not Normal at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	0.485	95% Adjusted-CLT UCL (Chen-1995)	0.583
		95% Modified-t UCL (Johnson-1978)	0.502

Gamma GOF Test

A-D Test Statistic	2.519	Anderson-Darling Gamma GOF Test
5% A-D Critical Value	0.783	Data Not Gamma Distributed at 5% Significance Level
K-S Test Statistic	0.243	Kolmogorov-Smirnov Gamma GOF Test
5% K-S Critical Value	0.175	Data Not Gamma Distributed at 5% Significance Level

Data Not Gamma Distributed at 5% Significance Level

Gamma Statistics

k hat (MLE)	0.773	k star (bias corrected MLE)	0.712
Theta hat (MLE)	0.369	Theta star (bias corrected MLE)	0.401
nu hat (MLE)	41.75	nu star (bias corrected)	38.45
MLE Mean (bias corrected)	0.285	MLE Sd (bias corrected)	0.338
		Approximate Chi Square Value (0.05)	25.25
Adjusted Level of Significance	0.0401	Adjusted Chi Square Value	24.56

Assuming Gamma Distribution

95% Approximate Gamma UCL (use when n>=50))	0.434	95% Adjusted Gamma UCL (use when n<50)	0.446

Lognormal GOF Test

Shapiro Wilk Test Statistic	0.905	Shapiro Wilk Lognormal GOF Test
5% Shapiro Wilk Critical Value	0.923	Data Not Lognormal at 5% Significance Level
Lilliefors Test Statistic	0.144	Lilliefors Lognormal GOF Test
5% Lilliefors Critical Value	0.167	Data appear Lognormal at 5% Significance Level

Data appear Approximate Lognormal at 5% Significance Level

Lognormal Statistics

Minimum of Logged Data	-3.576	Mean of logged Data	-2.026
Maximum of Logged Data	1.144	SD of logged Data	1.036

Assuming Lognormal Distribution

95% H-UCL	0.38	90% Chebyshev (MVUE) UCL	0.37
95% Chebyshev (MVUE) UCL	0.438	97.5% Chebyshev (MVUE) UCL	0.533
99% Chebyshev (MVUE) UCL	0.719		

Nonparametric Distribution Free UCL Statistics

Data appear to follow a Discernible Distribution at 5% Significance Level

On-Project Blue Beach Area Surface Soil

Nonparametric Distribution Free UCLs			
95% CLT UCL	0.478	95% Jackknife UCL	0.485
95% Standard Bootstrap UCL	0.473	95% Bootstrap-t UCL	1.19
95% Hall's Bootstrap UCL	1.224	95% Percentile Bootstrap UCL	0.497
95% BCA Bootstrap UCL	0.663		
90% Chebyshev(Mean, Sd) UCL	0.638	95% Chebyshev(Mean, Sd) UCL	0.797
97.5% Chebyshev(Mean, Sd) UCL	1.019	99% Chebyshev(Mean, Sd) UCL	1.454

Suggested UCL to Use	
95% H-UCL	0.38

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

ProUCL computes and outputs H-statistic based UCLs for historical reasons only.
H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.
It is therefore recommended to avoid the use of H-statistic based 95% UCLs.
Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.

K-S Test Statistic	0.197	Kolmogorov-Smirnov GOF	
5% K-S Critical Value	0.18	Detected Data Not Gamma Distributed at 5% Significance Level	
Detected Data Not Gamma Distributed at 5% Significance Level			

Gamma Statistics on Detected Data Only			
k hat (MLE)	0.635	k star (bias corrected MLE)	0.587
Theta hat (MLE)	1.588	Theta star (bias corrected MLE)	1.716
nu hat (MLE)	33.02	nu star (bias corrected)	30.54
Mean (detects)	1.008		

Gamma ROS Statistics using Imputed Non-Detects			
GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs			
GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)			
For such situations, GROS method may yield incorrect values of UCLs and BTVs			
This is especially true when the sample size is small.			
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates			
Minimum	0.01	Mean	0.971
Maximum	12	Median	0.292
SD	2.28	CV	2.348
k hat (MLE)	0.584	k star (bias corrected MLE)	0.544
Theta hat (MLE)	1.664	Theta star (bias corrected MLE)	1.787
nu hat (MLE)	31.52	nu star (bias corrected)	29.35
Adjusted Level of Significance (β)	0.0401		
Approximate Chi Square Value (29.35, α)	17.98	Adjusted Chi Square Value (29.35, β)	17.41
95% Gamma Approximate UCL (use when n>=50)	1.585	95% Gamma Adjusted UCL (use when n<50)	1.637

Estimates of Gamma Parameters using KM Estimates			
Mean (KM)	0.971	SD (KM)	2.237

Suggested UCL to Use

95% Adjusted Gamma UCL	0.234

When a data set follows an approximate (e.g., normal) distribution passing one of the GOF test
When applicable, it is suggested to use a UCL based upon a distribution (e.g., gamma) passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Suggested UCL to Use

95% H-UCL 94.18

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

ProUCL computes and outputs H-statistic based UCLs for historical reasons only.
H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.
It is therefore recommended to avoid the use of H-statistic based 95% UCLs.
Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.

Suggested UCL to Use

95% Student's-t UCL	14.05

When a data set follows an approximate (e.g., normal) distribution passing one of the GOF test
When applicable, it is suggested to use a UCL based upon a distribution (e.g., gamma) passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Mean (detects)	0.982		

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	0.862
Maximum	6.19	Median	0.48
SD	1.211	CV	1.405

Suggested UCL to Use

KM H-UCL	1.467

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

This is especially true when the sample size is small.

For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	0.01	Mean	0.513
