This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP, Remedial Investigation/Feasibility Study, New York Ordnance Works and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bluestone Environmental Group, Inc., Malvern, PA; analyses were performed by Eurofins Environment Testing TestAmerica, Arvada, CO and were reported under sample delivery group (SDG) 280-148419-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 101 results (16.83%) out of the 600 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

The samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 3.7ºC, 4.9ºC, 5.7ºC and 5.9ºC.
The following samples were analyzed at Eurofins Seattle laboratory due to instrumentation issues in Denver: PH-DUP-001_210507, NYOW-B-SL033-A, NYOW-B-PH033-B, NYOW-B-SL034-A, NYOW-B-PH035-B, and NYOW-B-PH035-C. The samples arrived at 4.2ºC and 3.3ºC. The following samples were analyzed at Eurofins Lancaster laboratory due to instrumentation issues in Denver: NYOW-B-PH033-C, NYOW-B-PH034-B, NYOW-B-PH034-C, and NYOW-B-SL035-A. The samples arrived at 3.3ºC.

| Analytical Method | Data Reviewer Comment |
|---|---|
| BNASIMD | No additional comments; see Checklist for detail. |
| SW6010C | No additional comments; see Checklist for detail. |
| SW6020A | No additional comments; see Checklist for detail. |
| SW7470A | No additional comments; see Checklist for detail. |
| SW7471B | No additional comments; see Checklist for detail. |
| SW9060A | Samples NYOW-B-PH033-C [4.67X], NYOW-B-PH034-B [4.12X], NYOW-B-PH034-C [4.51X] and NYOW-B-SL035-A [4.71X] required dilution prior to analysis. The reporting limits have been adjusted accordingly. |

August 18, 2021

Reviewed by Emily Strake, Technical Director/ Data Validator, Bluestone

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

**Quality Control Outliers for test method BNASIMD, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| MB 280-535801/1-A (LB)/ MB 280-535801/1-A | Acenaphthylene | 1.430 | < 0.34 | < 10 | ug/kg | U/None* | L | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

**Qualified Results associated with the Lab Blank for BNASIMD**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH034-B | N | Acenaphthylene | 11.0 | 0.470 J | 1.20 U | | ug/kg | L |
| NYOW-B-SL033-A | N | Acenaphthylene | 11.0 | 2.10 J | 11.0 U | | ug/kg | L |
| NYOW-B-SL034-A | N | Acenaphthylene | 11.0 | 1.40 J | 11.0 U | | ug/kg | L |
| NYOW-B-SL041-A | N | Acenaphthylene | 12.0 | 2.30 J Q | 12.0 UJ | | ug/kg | L/I |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, LCS RPD**

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| LCSD 280-536125/3-A (BD)/ LCSD 280-536125/3-A | 1-Methylnaphthalene | 0.1480 | < 0.1 | < 0.1 | ug/l | J/None | Z | |
| LCSD 280-536125/3-A (BD)/ LCSD 280-536125/3-A | Acenaphthene | 0.1710 | < 0.1 | < 0.1 | ug/l | J/None | Z | |
| LCSD 280-536125/3-A (BD)/ LCSD 280-536125/3-A | Fluorene | 0.1590 | < 0.1 | < 0.1 | ug/l | J/None | Z | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method BNASIMD, Surrogate**

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| EB-01_210507 (EB)/ 280-148419-14 | 2-Fluorobiphenyl | 52.00 | 53 - 106 | 10 - 106 | percent | J/UJ | I | |
| EB-01_210507 (EB)/ 280-148419-14 | Nitrobenzene-d5 | 53.00 | 55 - 111 | 10 - 111 | percent | J/UJ | I | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| MB 280-536835/1-A (LB)/ MB 280-536835/1-A | Manganese | 0.2650 | < 0.1 | < 4.5 | mg/kg | U/None* | L | |
| MB 280-536835/1-A (LB)/ MB 280-536835/1-A | Aluminum | 2.020 | < 1.6 | < 50 | mg/kg | U/None* | L | |
| MB 280-536835/1-A (LB)/ MB 280-536835/1-A | Zinc | 0.9050 | < 0.4 | < 8 | mg/kg | U/None* | L | |
| MB 280-536835/1-A (LB)/ MB 280-536835/1-A | Iron | 13.40 | < 8.3 | < 80 | mg/kg | U/None* | L | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6010C, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL041-A (MS)/ 280-148419-1MS | Aluminum | 349.1 | 74 - 119 | 10 - 200 | percent | J/None | M | Spike amount Insignificant |
| NYOW-B-SL041-A (MS)/ 280-148419-1MS | Iron | -100.0 | 81 - 118 | 10 - 200 | percent | J/X | M | Spike amount Insignificant |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6010C, Total, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| MB 280-536276/1-A (LB)/ MB 280-536276/1-A | Iron | 85.50 | < 22 | < 100 | ug/l | U/None* | L | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

**Qualified Results associated with the Lab Blank for SW6010C, Total**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| EB-01_210507 | EB | Iron | 100 | 240 B | 240 J | + | ug/l | L |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW7470A, Total, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| MB 280-536171/1-A (LB)/ MB 280-536171/1-A | Mercury | 0.03500 | < 0.027 | < 0.2 | ug/l | U/None* | L | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW9060A, Field Duplicate RPD**

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| PH-DUP-001_210507 (N)/ 280-148419-4 | Total Organic Carbon | 73.42 | < 50 | < 50 | rpd | J/None | D3 | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the Field Duplicate RPD for SW9060A**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH041-C | N | Total Organic Carbon | 4000 | 2500 J | 2500 J | | mg/kg | D3/TR |
| PH-DUP-001_210507 | FD | Total Organic Carbon | 2000 | 5400 H | 5400 J | - | mg/kg | D3/H1 |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW9060A, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH033-C (SD)/ 280-148419-7MSD | Total Organic Carbon | 11.51 | 46 - 130 | 10 - 200 | percent | J/UJ | M | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the MS Recovery for SW9060A**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH033-C | N | Total Organic Carbon | 1400 | 14000 H J1 | 14000 J | - | mg/kg | M/D/H1 |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW9060A, MS RPD**

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH033-C (SD)/ 280-148419-7MSD | Total Organic Carbon | 55.89 | < 20 | < 20 | rpd | J/UJ | D | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the MS RPD for SW9060A**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH033-C | N | Total Organic Carbon | 1400 | 14000 H J1 | 14000 J | - | mg/kg | M/D/H1 |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

**Reason Code Definitions**

| Code | Definition |
|---|---|
| A | Serial dilution |
| B2 | CCB |
| D | MS RPD |
| D3 | Field Duplicate RPD |
| H1 | Test Hold Time |
| I | Surrogate recovery outside project limits. |
| L | Lab Blank |
| M | MS Recovery |
| TR | Trace Level Detect |
| V | Equipment Blank |
| V2 | CCV |
| V6 | Low Level Calibration Verification |

**Reason Code Definitions**

| Code | Definition |
|---|---|
| Z | LCS RPD |

**Flag Code and Definitions**

| Flag | Definition |
|---|---|
| J | Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria. |
| U | Undetected: The analyte was analyzed for, but not detected. |
| UJ | The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria. |

**Bias**

| | |
|---|---|
| - | The result may be biased low |
| + | The result may be biased high |

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

**Review Questions**

Method: BNASIMD (GC/MS-SIM Analysis by SW8270D)

| Review Questions | Yes | No | NA | Comment |
|---|---|---|---|---|
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the GC/MS system properly tuned based on method criteria? | • | | | |
| Was instrument tuning completed every 12 hours during sample analysis? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | | • | | CCV 280-537291/3 exhibited a %D greater than 20% for dibenz(a,h)anthracene at 22%. The associated equipment blank sample result is qualified as "UJ". |
| Were Internal Standard retention times and area criteria within method requirements? | • | | | |
| Were internal standards spiked for every sample, standard, and QC sample? | • | | | |
| Were surrogate recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | | • | | MB 280-535801/1-A exhibited a detection less than the LOQ for acenaphthylene at 1.43 ug/kg. The associated sample results less than the LOQ are qualified as "U" at the LOD or LOQ. |
| Were target analytes in the field blank less than MDL? | • | | | |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | • | | | |
| Was the LCS/LCSD RPD within project acceptance limits? | • | | | |
| Was a MS/MSD pair prepared with each batch? | | • | | Aqueous MS/SD not performed. |
| Were MS/MSD recoveries within project acceptance limits? | • | | | |
| Was the MS/MSD RPD within project acceptance limits? | • | | | |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | • | | | |
| Were QAPP specified laboratory PQLs achieved? | | • | | Equipment blank sample had LOQs slightly greater than PQLGs for 4 PAHs |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | | • | | CCV CA not performed. |

**Review Questions**

| Method: BNASIMD (GC/MS-SIM Analysis by SW8270D) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

**Review Questions**

| Method: SW6010C (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | | • | | CCVL 280-537270/101 exhibited a recovery less than 80% for silver at 78%. The associated positive detection below the level of the CCV is qualified as "J-" and non-detects are qualified as "UJ". |
| Were ICB/CCBs run at the required frequency and within acceptance criteria? | • | | | |
| Did the ICSA have any non-target interferents above the MDL? | • | | | The ICSA associated with batch 280-537270 had results for Ba greater than the LOD. The initial ICSA result (12.4 ppb) was > LOD (2 ppb). The laboratory verified using ICP-MS that Ba is a trace impurity in the ICSA standard at 12.4 ppb. The ICSA associated with batch 280-536668 had results for Ba greater than the LOD. The initial ICSA result (13 ppb) was > LOD (2 ppb).The laboratory verified using ICP-MS that Ba is a trace impurity in the ICSA standard at 12.4 ppb. |
| Were the ICSA/ICSAB recoveries within QAPP acceptance limits? | • | | | |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | | • | | See QC Outliers. |
| Were target analytes in the field blank less than MDL? | | • | | See QC Outliers. Soil sample results are not qualified based on aqueous EB contamination. |
| Was the laboratory duplicate RPD within project acceptance limits? | | | • | |
| Were LCS/LCSD recoveries within project acceptance limits? | • | | | |
| Was the LCS/LCSD RPD within project acceptance limits? | • | | | |
| Was a MS/MSD pair prepared with each batch? | | • | | Aqueous MS/SD not performed. |
| Were MS/MSD recoveries within project acceptance limits? | | • | | Sample concentration > 4X spiked amount for Al, Fe, and Mn. |
| Was the MS/MSD RPD within project acceptance limits? | • | | | |
| Were the post spike recoveries within project acceptance limits? | | • | | NYOW-B-SL041-A, PDS recoveries are greater than 120% for multiple analytes (Ba, Be, Ca, Cr, Co, Cu, Pb, Mg, Ni, K, Ag, Na, V, and Zn). The MS/SD recoveries were acceptable; therefore, a PDS was not necessary. The PDS recoveries of Al, Fe, and Mn were less than 80%. The sample concentrations were >4X the spiked amount in the MS/SD; qualification is not necessary. |

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP, Remedial Investigation/Feasibility Study, New York Ordnance Works and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bluestone Environmental Group, Inc., Malvern, PA; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 280-148471-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 184 results (16.49%) out of the 1116 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

The samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 0.6ºC, 0.8ºC, 2.1ºC, 2.9ºC, 3.1ºC, 4.0ºC and 4.7ºC. Samples were sent to Eurofins Lancaster Laboratory Environmental and Eurofins Seattle for TOC analysis and were received at temperatures of 3.3ºC, 4.2ºC, and 3.3ºC.
No sample time was listed on containers for the following sample: NYOW-B-PH026-C. This sample was logged according to
the COC.

| Analytical Method | Data Reviewer Comment |
|---|---|
| BNASIMD | The following sample could not be thoroughly homogenized before sub-sampling was performed due to sample matrix:<br>NYOW-B-PH026-C, PH-DUP-003_210510, NYOW-B-SL022-A, NYOW-B-PH022-B and NYOW-B-PH022-C. the samples were wet clay. |
| SW6010C | No additional comments; see Checklist for detail. |
| SW6020A | No additional comments; see Checklist for detail. |
| SW7470A | No additional comments; see Checklist for detail. |
| SW7471B | No additional comments; see Checklist for detail. |
| SW9060A | Samples SL-DUP-001_210510[5.16X], NYOW-B-PH037-C[4.12X], NYOW-B-SL038-A [6.57X], NYOW-B-PH038-C[2.76X], NYOW-B-SL039-A[4.78X] and NYOW-B-PH039-C [2.86X] required dilution prior to analysis. |

August 31, 2021

Reviewed by Emily Strake, Technical Director/ Data Validator, Bluestone

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

**Quality Control Outliers for test method BNASIMD, Field Duplicate RPD**

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| PH-DUP-001_210510 (N)/ 280-148471-14 | 1-Methylnaphthalene | 200.0 | < 50 | < 50 | rpd | J/None | D3 | |
| PH-DUP-001_210510 (N)/ 280-148471-14 | Naphthalene | 126.2 | < 50 | < 50 | rpd | J/None | D3 | |
| PH-DUP-003_210510 (N)/ 280-148471-22 | Naphthalene | 200.0 | < 50 | < 50 | rpd | J/None | D3 | |
| SL-DUP-001_210510 (N)/ 280-148471-2 | 1-Methylnaphthalene | 200.0 | < 50 | < 50 | rpd | J/None | D3 | |
| SL-DUP-001_210510 (N)/ 280-148471-2 | Naphthalene | 200.0 | < 50 | < 50 | rpd | J/None | D3 | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method BNASIMD, LCS Recovery**

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| LCSD 280-535982/3-A (BD)/ LCSD 280-535982/3-A | Indeno(1,2,3-c,d)pyrene | 48.83 | 49 - 130 | 10 - 200 | percent | J/UJ | C | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the LCS Recovery for BNASIMD**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance. In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, LCS RPD**

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method BNASIMD, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH036-B (SD)/ 280-148471-12MSD | 1-Methylnaphthalene | 33.86 | 43 - 111 | 10 - 200 | percent | J/UJ | M | |
| NYOW-B-PH036-B (SD)/ 280-148471-12MSD | 2-Methylnaphthalene | 36.06 | 39 - 114 | 10 - 200 | percent | J/UJ | M | |
| NYOW-B-PH036-B (SD)/ 280-148471-12MSD | Acenaphthene | 41.73 | 44 - 111 | 10 - 200 | percent | J/UJ | M | |
| NYOW-B-PH036-B (SD)/ 280-148471-12MSD | Acenaphthylene | 38.74 | 39 - 116 | 10 - 200 | percent | J/UJ | M | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the MS Recovery for BNASIMD**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH036-B | N | 1-Methylnaphthalene | 11.0 | 2.10 U J1 | 2.10 UJ | | ug/kg | M/D |
| NYOW-B-PH036-B | N | 2-Methylnaphthalene | 11.0 | 2.10 U J1 | 2.10 UJ | | ug/kg | M/D |
| NYOW-B-PH036-B | N | Acenaphthene | 11.0 | 1.10 U J1 | 1.10 UJ | | ug/kg | M/D |
| NYOW-B-PH036-B | N | Acenaphthylene | 11.0 | 1.10 U J1 | 1.10 UJ | | ug/kg | M/D |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance. In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, Surrogate**

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH039-C (N)/ 280-148471-10 | Terphenyl-d14 | 56.00 | 58 - 133 | 10 - 133 | percent | J/UJ | I | |
| NYOW-B-SL038-A (N)/ 280-148471-5 | 2-Fluorobiphenyl | 43.00 | 46 - 115 | 10 - 115 | percent | J/UJ | I | |
| NYOW-B-SL038-A (N)/ 280-148471-5 | Nitrobenzene-d5 | 34.00 | 44 - 125 | 10 - 125 | percent | J/UJ | I | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance. In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| MB 280-537079/1-A (LB)/ MB 280-537079/1-A | Aluminum | 1.740 | < 1.6 | < 50 | mg/kg | U/None* | L | |
| MB 280-537082/1-A (LB)/ MB 280-537082/1-A | Copper | 0.4240 | < 0.22 | < 5 | mg/kg | U/None* | L | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6010C, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. **Quality Control Outliers for test method SW6010C, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL026-A (MS)/ 280-148471-19MS | Nickel | 79.25 | 83 - 113 | 10 - 200 | percent | J/UJ | M | |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance. In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, MS RPD**

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH026-C (SD)/ 280-148471-21MSD | Manganese | 81.43 | < 20 | < 20 | rpd | J/UJ | D | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the MS RPD for SW6010C**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH026-C | N | Manganese | 4.30 | 410 J1 | 410 J | | mg/kg | D |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance. In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Total, Equipment Blank**

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| EB-01_210510 (EB)/ 280-148471-26 | Barium | 1.400 | < 0.82 | < 10 | ug/l | U/None* | V | |
| EB-01_210510 (EB)/ 280-148471-26 | Manganese | 4.900 | < 1.9 | < 10 | ug/l | U/None* | V | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6020A, Field Duplicate RPD**

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|

|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL026-A (MS)/ 280-148471-19MS | Mercury | 78.47 | 80 - 124 | 10 - 200 | percent | J/UJ | M | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the MS Recovery for SW7471B, Total**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL026-A | N | Mercury | 0.0220 | 0.0680 J1 | 0.0680 J | - | mg/kg | M |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance. In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW9060A, Field Duplicate RPD**

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| PH-DUP-003_210510 (N)/ 280-148471-22 | Total Organic Carbon | 76.60 | < 50 | < 50 | rpd | J/None | D3 | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the Field Duplicate RPD for SW9060A**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH026-C | N | Total Organic Carbon | 2000 | 13000 | 13000 J | | mg/kg | D3 |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

**Reason Code Definitions**

| Code | Definition |
|---|---|
| A | Serial dilution |
| B2 | CCB |

**Reason Code Definitions**

| Code | Definition |
|---|---|
| C | LCS Recovery |
| D | MS RPD |
| D3 | Field Duplicate RPD |
| H1 | Test Hold Time |
| I | Surrogate recovery outside project limits. |
| L | Lab Blank |
| M | MS Recovery |
| TR | Trace Level Detect |
| V | Equipment Blank |
| V6 | Low Level Calibration Verification |
| Z | LCS RPD |

**Flag Code and Definitions**

| Flag | Definition |
|---|---|
| J | Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria. |
| U | Undetected: The analyte was analyzed for, but not detected. |
| UJ | The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria. |

**Bias**

| | |
|---|---|
| - | The result may be biased low |
| + | The result may be biased high |

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

**Review Questions**

| Method: BNASIMD (GC/MS-SIM Analysis by SW8270D) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | See SDG Comments. |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the GC/MS system properly tuned based on method criteria? | • | | | |
| Was instrument tuning completed every 12 hours during sample analysis? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | | • | | CCV 280-537291/3 exhibited a %D > 20% for dibenz(a,h)anthracene at 22%. There are no associated investigative samples. |
| Were Internal Standard retention times and area criteria within method requirements? | • | | | |
| Were internal standards spiked for every sample, standard, and QC sample? | • | | | |
| Were surrogate recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | • | | | |
| Were target analytes in the field blank less than MDL? | • | | | |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was the LCS/LCSD RPD within project acceptance limits? | • | | | |
| Was a MS/MSD pair prepared with each batch? | | • | | MS/SD not performed for soil batch 536016 and aqueous batch 536125. |
| Were MS/MSD recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was the MS/MSD RPD within project acceptance limits? | | • | | Sample NYOW-B-PH036-B exhibited RPDs > 40% for 1-methylnaphthalene (61%), 2-methylnaphthalene (59%), acenaphthene (43%), acenaphthylene (47%), and naphthalene (57%). |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | • | | | |
| Were QAPP specified laboratory PQLs achieved? | • | | | |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | | • | | CCV CAs not performed. |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

**Review Questions**

| Method: SW6010C (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | See SDG Comments. |
| Were samples preserved properly and received in good condition? | • | | | |

| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | • | | | CCVL 280-537422/80 does not bracket investigative samples. |
| Were ICB/CCBs run at the required frequency and within acceptance criteria? | • | | | |
| Did the ICSA have any non-target interferents above the MDL? | • | | | The ICSA associated with batch 280-537533 had results for Ba greater than the LOD. The initial ICSA result (13.1 ppb) was > LOD (2 ppb). The laboratory has confirmed using ICP-MS that Ba is a trace impurity in the ICSA standard at 12.4 ppb.The ICSA associated with batch 280-537729 had results for Ba at a level greater than the limit of detection. The initial ICSA result (13.4 ppb) was > LOD (2 ppb). The laboratory has confirmed using ICP-MS that Ba is a trace impurity in the ICSA standard. The ICSA associated with batch 280-537422 had results for Ba greater than the LOD. The initial ICSA result (13.3 ppb) was > LOD (2 ppb). The laboratory has confirmed using ICP-MS Ba is trace impurity in the ICSA standard. |
| Were the ICSA/ICSAB recoveries within QAPP acceptance limits? | • | | | |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | | • | | See QC Outliers. |
| Were target analytes in the field blank less than MDL? | | • | | See QC Outliers. Aqueous field blank detections are not used to evaluate soil sample results. |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | • | | | |
| Was the LCS/LCSD RPD within project acceptance limits? | • | | | |
| Was a MS/MSD pair prepared with each batch? | | • | | Aqueous MS/SD not performed. |
| Were MS/MSD recoveries within project acceptance limits? | | • | | See QC Outliers. ADR recoveries do not match laboratory report.<br>Copper recovery for SD sample NYOW-B-SL026-A is acceptable. |
| Was the MS/MSD RPD within project acceptance limits? | | • | | See QC Outliers. |

**Review Questions**

| Method: SW6010C (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Were the post spike recoveries within project acceptance limits? | | • | | The PDS for sample NYOW-B-PH036-B exhibited recoveries less than 80% for Al (12%), Ca (31%), Fe (-172%), and Mn (-117%). For the MS/SD, the sample concentration was >4X the spiked amount; the PDS is not necessary. The PDS for sample NYOW-B-PH026-C exhibited recoveries less than 80% for Al (19%), Ca (18%), Fe (-172%), Mn (-59%), and Ag (79%). For the MS/SD, the sample concentration was >4X the spiked amount; the PDS is not necessary. A PDS is not required for silver. |
| Were the serial dilution RPD values within project acceptance limits? | | • | | Serial dilution sample NYOW-B-PH026-C exhibited RPDs > 10% for Al (11%), Ca (14%), and Fe (13%). NYOW-B-PH026-C and results for the following samples with similar matrix are qualified as "J": NYOW-B-PH022-B, NYOW-B-PH022-C, NYOW-B-SL022-A, and PH-DUP-003_210510. |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | | • | | See QC Outliers. |
| Were QAPP specified laboratory PQLs achieved? | | • | | LOQs for cobalt were slightly greater than PQLGs due to percent moisture adjustments. |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | • | | | |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | | • | | CCVL 280-536644/48 exhibited a recovery less than 80% for Sb at 75%. The associated equipment blank sample result is qualified as "J-".<br>CCVL 280-537509/56 exhibited a recovery > 120% for Cd at 121%. The associated positive detections less than the level of the CCV are qualified as "J+".<br>CCVL 280-537509/80 and /87 exhibited recoveries less than 80% for Cd at 79% and 70%. The associated positive detections less than the level of the CCV are qualified as "J-".<br>ICVL 280-537762/26 exhibited a recovery > 120% for Sb at 125%. The associated detections below the level of the CCV are qualified as "J+" unless "U" qualified on the basis of blank contamination.<br>CCVL 280-537730/65, /77, and /90 exhibited recoveries < 80% for Tl at 76%, 79%, and 77%. The associated sample results were detections below the level of the CCV and are qualified as "J-". |
| Were ICB/CCBs run at the required frequency and within acceptance criteria? | | • | | CCB 280-536644/35 and CCB 280-536644/47 exhibited detections less than the LOQ for Tl at 0.103 ug/L and 0.119 ug/L. The associated equipment blank sample result was non-detect.<br>ICB 280-537509/12 and CCBs 280-537509/55 and /68 exhibited detections below the LOQ for Tl ranging from 0.101 ug/L to 0.148 ug/L. The associated sample results less than the aqueous LOQ are qualified as "U".<br>ICB 280-537762/25 and CCBs 280-537762/96, /109, and /122 exhibited detections below the LOQ for Sb ranging from 0.429 ug/L to 0.724 ug/L. The associated detection below the aqueous LOQ is qualified as "U".<br>CCBs 280-537948/44, /57, /66, and /74 exhibited detections for Sb below the LOQ ranging from 0.458 ug/L to 0.866 ug/L. The associated positive detections below the aqueous LOQ are qualified as "U". |
| Did the ICSA have any non-target interferents above the MDL? | • | | | The ICSA associated with batch 280-536644 had results for Cr at a level greater than the LOD. The initial ICSA result (1.925 ppb) was > LOD (1.8 ppb). The vendor acknowledges that Cr is a trace impurity in the ICSA standard. |

**Review Questions**

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP, Remedial Investigation/Feasibility Study, New York Ordnance Works and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bluestone Environmental Group, Inc., Malvern, PA; analyses were performed by Eurofins Environment Testing TestAmerica, Arvada, CO and were reported under sample delivery group (SDG) 280-148501-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 247 results (23.98%) out of the 1030 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

The samples arrived in good condition, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 0.4ºC, 1.2ºC, 1.4ºC, 2.2ºC, 2.8ºC, 3.0ºC and 3.8ºC. Samples analyzed for TOC were sent to Eurofins Seattle and were received at temperatures of 4.2ºC and 3.3ºC. Sampled analyzed for TOC were sent to Eurofins Lancaster Laboratories and were received at temperatures of 3.2ºC and 5.0ºC. For sample EB-01_21051, the 500mL Nitric container had no label, sample ID, date or time on container. 2/2 250mL containers had no time written on them. The samples were logged in accordance with the COC.

| Analytical Method | Data Reviewer Comment |
|---|---|
| BNASIMD | No additional comments; see Checklist for detail. |
| SW6010C | Samples NYOW-B-PH024-B[5X] and NYOW-B-SL031-A[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly. |
| SW6020A | No additional comments; see Checklist for detail. |
| SW7470A | No additional comments; see Checklist for detail. |
| SW7471B | No additional comments; see Checklist for detail. |
| SW9060A | Samples NYOW-B-PH040-C[4.02X], NYOW-B-PH028-C[4.71X], NYOW-B-PH024-C[5.3X], NYOW-B-PH025-C[9.98X], NYOW-B-PH027-B[4.92X], NYOW-B-PH027-C[12.53X], NYOW-B-PH031-C[4.86X] and PH-DUP-001_210511[4.54X] required dilution prior to analysis. The reporting limits have been adjusted accordingly. |

August 12, 2021

Reviewed by Emily Strake, Technical Director/ Data Validator, Bluestone

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

**Quality Control Outliers for test method BNASIMD, Field Duplicate RPD**

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| PH-DUP-001_210511 (N)/ 280-148501-23 | Benzo (b)fluoranthene | 200.0 | < 50 | < 50 | rpd | J/None | D3 | |
| SL-DUP-001_210511 (N)/ 280-148501-17 | 1-Methylnaphthalene | 200.0 | < 50 | < 50 | rpd | J/None | D3 | |
| SL-DUP-001_210511 (N)/ 280-148501-17 | 2-Methylnaphthalene | 200.0 | < 50 | < 50 | rpd | J/None | D3 | |
| SL-DUP-001_210511 (N)/ 280-148501-17 | Acenaphthylene | 200.0 | < 50 | < 50 | rpd | J/None | D3 | |
| SL-DUP-001_210511 (N)/ 280-148501-17 | Naphthalene | 200.0 | < 50 | < 50 | rpd | J/None | D3 | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method BNASIMD, LCS RPD**

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| LCSD 280-536125/3-A (BD)/ LCSD 280-536125/3-A | 1-Methylnaphthalene | 0.1480 | < 0.1 | < 0.1 | ug/l | J/None | Z | |
| LCSD 280-536125/3-A (BD)/ LCSD 280-536125/3-A | Acenaphthene | 0.1710 | < 0.1 | < 0.1 | ug/l | J/None | Z | |
| LCSD 280-536125/3-A (BD)/ LCSD 280-536125/3-A | Fluorene | 0.1590 | < 0.1 | < 0.1 | ug/l | J/None | Z | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method BNASIMD, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL023-A (MS)/ 280-148501-1MS | Chrysene | 52.37 | 57 - 118 | 10 - 200 | percent | J/UJ | M | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the MS Recovery for BNASIMD**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL023-A | N | Chrysene | 12.0 | 6.00 J J1 | 6.00 J | - | ug/kg | M/TR |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, Prep Hold Time**

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of extraction found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH023-B (N)/ 280-148501-2 | | 14.02 | < 14 | < 28 | days | J/UJ | H2 | Prep Exceeds UWL |
| NYOW-B-PH023-C (N)/ 280-148501-3 | | 14.01 | < 14 | < 28 | days | J/UJ | H2 | Prep Exceeds UWL |
| NYOW-B-SL023-A (N)/ 280-148501-1 | | 14.02 | < 14 | < 28 | days | J/UJ | H2 | Prep Exceeds UWL |
| NYOW-B-SL023-A (N)/ 280-148501-1MS | | 14.02 | < 14 | < 28 | days | J/UJ | H2 | Prep Exceeds UWL |
| NYOW-B-SL023-A (N)/ 280-148501-1MSD | | 14.02 | < 14 | < 28 | days | J/UJ | H2 | Prep Exceeds UWL |
| SL-DUP-001_210511 (FD)/ 280-148501-17 | | 14.40 | < 14 | < 28 | days | J/UJ | H2 | Prep Exceeds UWL |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method BNASIMD, Surrogate**

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH025-B (N)/ 280-148501-14 | 2-Fluorobiphenyl | 42.00 | 46 - 115 | 10 - 115 | percent | J/UJ | I | |
| NYOW-B-PH025-B (N)/ 280-148501-14 | Nitrobenzene-d5 | 42.00 | 44 - 125 | 10 - 125 | percent | J/UJ | I | |
| NYOW-B-PH028-C (N)/ 280-148501-9 | 2-Methylnaphthalene-d10 | 34.00 | 41 - 100 | 10 - 100 | percent | J/UJ | I | |
| NYOW-B-PH028-C (N)/ 280-148501-9 | 2-Fluorobiphenyl | 38.00 | 46 - 115 | 10 - 115 | percent | J/UJ | I | |
| NYOW-B-PH028-C (N)/ 280-148501-9 | Nitrobenzene-d5 | 35.00 | 44 - 125 | 10 - 125 | percent | J/UJ | I | |
| NYOW-B-SL024-A (N)/ 280-148501-10 | Nitrobenzene-d5 | 40.00 | 44 - 125 | 10 - 125 | percent | J/UJ | I | |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Field Duplicate RPD**

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| PH-DUP-001_210511 (N)/ 280-148501-23 | Silver | 200.0 | < 50 | < 50 | rpd | J/None | D3 | |
| SL-DUP-001_210511 (N)/ 280-148501-17 | Calcium | 60.74 | < 50 | < 50 | rpd | J/None | D3 | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the Field Duplicate RPD for SW6010C**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL027-A | N | Calcium | 86.0 | 8800 | 8800 J | | mg/kg | D3 |
| SL-DUP-001_210511 | FD | Calcium | 98.0 | 4700 | 4700 J | | mg/kg | D3 |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| MB 280-537082/1-A (LB)/ MB 280-537082/1-A | Copper | 0.4240 | < 0.22 | < 5 | mg/kg | U/None* | L | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6010C, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH028-B (MS)/ 280-148501-8MS | Aluminum | 434.5 | 74 - 119 | 10 - 200 | percent | J/None | M | Spike amount Insignificant |
| NYOW-B-PH028-B (MS)/ 280-148501-8MS | Iron | 181.8 | 81 - 118 | 10 - 200 | percent | J/None | M | Spike amount Insignificant |
| NYOW-B-PH028-B (SD)/ 280-148501-8MSD | Calcium | 77.86 | 81 - 116 | 10 - 200 | percent | J/UJ | M | |
| NYOW-B-PH028-B (SD)/ 280-148501-8MSD | Nickel | 82.40 | 83 - 113 | 10 - 200 | percent | J/UJ | M | |
| NYOW-B-PH028-B (SD)/ 280-148501-8MSD | Aluminum | 396.4 | 74 - 119 | 10 - 200 | percent | J/None | M | Spike amount Insignificant |
| NYOW-B-PH028-B (SD)/ 280-148501-8MSD | Iron | 75.00 | 81 - 118 | 10 - 200 | percent | J/UJ | M | Spike amount Insignificant |
| NYOW-B-PH028-B (SD)/ 280-148501-8MSD | Manganese | 61.90 | 84 - 114 | 10 - 200 | percent | J/UJ | M | Spike amount Insignificant |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the MS Recovery for SW6010C**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH028-B | N | Calcium | 84.0 | 3300 J1 | 3300 J | - | mg/kg | M/D |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, MS RPD**

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Total, Equipment Blank**

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| EB-01_210511 (EB)/ 280-148501-24 | Barium | 0.8500 | < 0.82 | < 10 | ug/l | U/None* | V | |
| EB-01_210511 (EB)/ 280-148501-24 | Iron | 31.00 | < 22 | < 100 | ug/l | U/None* | V | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6020A, Field Duplicate RPD**

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| PH-DUP-001_210511 (N)/ 280-148501-23 | Cadmium | 81.48 | < 50 | < 50 | rpd | J/None | D3 | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6020A, Low Level Calibration Verification**

Compliance requirements for satisfactory low level calibration verification is established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data. Continuing calibration is performed to verify and evaluate instrument performance during sample analysis. Summary forms were evaluated against project acceptance criteria, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| CCVL 280-537730/65 (LV) | Thallium | 76.00 | 80 - 120 | 80 - 120 | % | J/UJ | V6 | |

| PH-DUP-001_210511 280-148501-23 | FD | Total Organic Carbon | 1400 | 8500 H | 8500 J | - | mg/kg | D3/H1 |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

**Reason Code Definitions**

| Code | Definition |
|---|---|
| A | Serial dilution |
| B2 | CCB |
| D | MS RPD |
| D3 | Field Duplicate RPD |
| H1 | Test Hold Time |
| H2 | Prep Hold Time |
| I | Surrogate recovery outside project limits. |
| L | Lab Blank |
| M | MS Recovery |
| TR | Trace Level Detect |
| V | Equipment Blank |
| V6 | Low Level Calibration Verification |
| Z | LCS RPD |

**Flag Code and Definitions**

| Flag | Definition |
|---|---|
| J | Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria. |
| U | Undetected: The analyte was analyzed for, but not detected. |
| UJ | The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria. |

**Bias**

| | |
|---|---|
| - | The result may be biased low |
| + | The result may be biased high |

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

**Review Questions**

| Method: BNASIMD (GC/MS-SIM Analysis by SW8270D) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the GC/MS system properly tuned based on method criteria? | • | | | |
| Was instrument tuning completed every 12 hours during sample analysis? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | | • | | CCV 280-537291/3 exhibited a %D > 20% for dibenz(a,h)anthracene at 22%. There are no associated investigative samples. |
| Were Internal Standard retention times and area criteria within method requirements? | • | | | |
| Were internal standards spiked for every sample, standard, and QC sample? | • | | | |
| Were surrogate recoveries within project acceptance limits? | | • | | See QC Outliers. The affected samples were out of hold and not sent for RE/RA. |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | • | | | |
| Were target analytes in the field blank less than MDL? | • | | | |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | • | | | |
| Was the LCS/LCSD RPD within project acceptance limits? | • | | | |
| Was a MS/MSD pair prepared with each batch? | | • | | Aqueous MS/SD not performed. |
| Were MS/MSD recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was the MS/MSD RPD within project acceptance limits? | • | | | |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | • | | | |
| Were QAPP specified laboratory PQLs achieved? | | • | | The EB sample had LOQs slightly greater than PQLGs for four PAHs. |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | | • | | CCV CAs not performed. |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

**Review Questions**

| Method: SW6010C (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | See SDG Comments. |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | • | | | CCVL 280-537422/80 exhibited a recovery less than 80% for Se at 77%. The CCVL does not bracket the analysis of investigative samples. |
| Were ICB/CCBs run at the required frequency and within acceptance criteria? | • | | | |
| Did the ICSA have any non-target interferents above the MDL? | • | | | The ICSA associated with batch 280-537729 had results for Ba at a level greater than the LOD. The initial ICSA result (13.4 ppb) was > LOD (2 ppb).<br>The ICSA associated with batch 280-537768 had results for Ba at a level greater than the LOD. The initial ICSA result (13.4 ppb) was > LOD (2 ppb).<br>The ICSA associated with batch 280-537422 had results for Ba at a level greater than the LOD. The initial ICSA result (13.3 ppb) was > LOD (2 ppb). The laboratory has confirmed using ICP-MS that Ba is a trace impurity in the ICSA standard. |
| Were the ICSA/ICSAB recoveries within QAPP acceptance limits? | • | | | |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | | • | | See QC Outliers. |
| Were target analytes in the field blank less than MDL? | | • | | See QC Outliers. Soil sample results are not qualified based on aqueous EB contamination. |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | • | | | |
| Was the LCS/LCSD RPD within project acceptance limits? | • | | | |
| Was a MS/MSD pair prepared with each batch? | | • | | A MS/SD was not performed for aqueous sample batch 536987 and soil sample batch 537082. |
| Were MS/MSD recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was the MS/MSD RPD within project acceptance limits? | | • | | See QC Outliers. |
| Were the post spike recoveries within project acceptance limits? | | • | | PDS sample NYOW-B-PH028-B exhibited recoveries less than 80% for Al (-15%), Fe (-207%), Mn (-134%), and Ag (71%). A PDS is not required for silver. For Al, Fe, and Mn, the sample concentration was >4X the spiked amount in the MS. |

**Review Questions**

| Method: SW6010C (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Were the serial dilution RPD values within project acceptance limits? | | • | | Sample NYOW-B-PH028-B exhibited RPDs > 10% for Al (19%), Fe (18%), and Mn (11%). |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | | • | | SL-DUP-001_210511 exhibited a RPD > 50% for Ca at 61%. |
| Were QAPP specified laboratory PQLs achieved? | | • | | The LOQ for Ca was greater than the PQLG in sample NYOW-B-PH024-B due to dilution. Co LOQs were greater than the PQLGs due to percent moisture adjustments. |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | • | | | |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

| Was a MS/MSD pair prepared with each batch? | | • | | A MS/SD was not performed for batch 536323. |
| Were MS/MSD recoveries within project acceptance limits? | • | | | |
| Was the MS/MSD RPD within project acceptance limits? | • | | | |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | • | | | |
| Were QAPP specified laboratory PQLs achieved? | | • | | Soil LOQs were slightly greater than PALs due to percent moisture adjustments. |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | | | • | |
| Were DoD QSM corrective actions followed if deviations were noted? | | | • | |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

**Review Questions**

Method: SW9060A (Total Organic Carbon)

| Review Questions | Yes | No | NA | Comment |
|---|---|---|---|---|
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | | • | | The following samples were analyzed outside of analytical holding time due to an instrument issue that required the samples to be analyzed at another lab in the Eurofins network: NYOW-B-PH040-C, NYOW-B-PH028-C, NYOW-B-PH027-B, NYOW-B-PH027-C, NYOW-B-PH031-C, NYOW-B-PH024-C, NYOW-B-PH025-C, and PH-DUP-001_210511. |
| Were all requested target analytes reported? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | • | | | |
| Were ICB/CCBs run at the required frequency and within acceptance criteria? | • | | | |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | • | | | |
| Were target analytes in the field blank less than MDL? | | | • | |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | | • | | LCSD not performed for sample batch 138452. |
| Were LCS/LCSD recoveries within project acceptance limits? | • | | | |
| Was the LCS/LCSD RPD within project acceptance limits? | • | | | |
| Was a MS/MSD pair prepared with each batch? | • | | | MS/SD for sample batch 138452 reported in SDG J148419.<br>MS/SD for sample batch 139499 reported in SDG J148774. |
| Were MS/MSD recoveries within project acceptance limits? | • | | | |
| Was the MS/MSD RPD within project acceptance limits? | • | | | |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | | • | | See QC Outliers. |
| Were QAPP specified laboratory PQLs achieved? | • | | | |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | • | | | |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP, Remedial Investigation/Feasibility Study, New York Ordnance Works and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bluestone Environmental Group, Inc., Malvern, PA; analyses were performed by Eurofins Environment Testing TestAmerica, Arvada, CO and were reported under sample delivery group (SDG) 280-148576-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 71 results (10.35%) out of the 686 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

The samples were received on 5/13/2021 9:35 AM. The samples arrived in good condition, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 2.0ºC, 3.0ºC, 3.7º C, 4.3ºC and 4.7ºC.
Samples were subcontracted to Eurofins Lancaster Laboratory for TOC analysis and arrived on 6/12/21 and 6/16/21 at temperatures of 5.0ºC and 3.2ºC.

| SW9060A | Samples NYOW-B-SL029-A (280-148576-1)[6.52X], NYOW-B-PH029-B (280-148576-2) [4.4X], NYOW-B-PH029-C (280-148576-3) [3.78X], NYOW-B-SL030-A (280-148576-4) [9.59X], NYOW-B-PH030-B (280-148576-5)[1.6X], NYOW-B-PH030-C (280-148576-6) [4.6X], NYOW-B-SL032-A (280-148576-7)[6.57X], NYOW-B-PH032-B (280-148576-8) [4.6X], NYOW-B-PH032-C (280-148576-9 [3.87X], NYOW-B-SL012-A (280-148576-10) [5.04X], NYOW-B-PH012-B (280-148576-11)[1.64X], NYOW-B-PH012-C (280-148576-12) [4.08X], NYOW-B-SL013-A (280-148576-13)[5.27X], NYOW-B-PH013-B (280-148576-14) [5.63X] and NYOW-B-PH013-C (280-148576-15)[2.52X] required dilution prior to analysis. The reporting limits have been adjusted accordingly. |

August 18, 2021

Reviewed by Emily Strake, Technical Director/ Data Validator, Bluestone

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

**Quality Control Outliers for test method BNASIMD, LCS Recovery**

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| LCSD 280-536584/3-A (BD)/ LCSD 280-536584/3-A | Benzo (a)anthracene | 122.2 | 59 - 120 | 10 - 200 | percent | J/None | C | |
| LCSD 280-536584/3-A (BD)/ LCSD 280-536584/3-A | Chrysene | 124.4 | 57 - 120 | 10 - 200 | percent | J/None | C | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method BNASIMD, LCS RPD**

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |

| LCSD 280-536584/3-A (BD)/ LCSD 280-536584/3-A | Pyrene | 41.44 | < 40 | < 40 | rpd | J/None | Z | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method BNASIMD, Surrogate**

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH029-B (N)/ 280-148576-2 | Fluoranthene-d10 | 50.00 | 55 - 101 | 10 - 101 | percent | J/UJ | I | |
| NYOW-B-PH029-B (N)/ 280-148576-2 | 2-Fluorobiphenyl | 44.00 | 46 - 115 | 10 - 115 | percent | J/UJ | I | |
| NYOW-B-PH029-B (N)/ 280-148576-2 | Terphenyl-d14 | 46.00 | 58 - 133 | 10 - 133 | percent | J/UJ | I | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the Surrogate for BNASIMD**

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| MB 280-537091/1-A (LB)/ MB 280-537091/1-A | Manganese | 0.1160 | < 0.1 | < 4.5 | mg/kg | U/None* | L | |
| MB 280-537091/1-A (LB)/ MB 280-537091/1-A | Zinc | 0.5430 | < 0.4 | < 8 | mg/kg | U/None* | L | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6010C, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL029-A (MS)/ 280-148576-1MS | Aluminum | 278.0 | 74 - 119 | 10 - 200 | percent | J/None | M | |
| NYOW-B-SL029-A (MS)/ 280-148576-1MS | Iron | 247.7 | 81 - 118 | 10 - 200 | percent | J/None | M | |
| NYOW-B-SL029-A (MS)/ 280-148576-1MS | Manganese | 195.4 | 84 - 114 | 10 - 200 | percent | J/None | M | |
| NYOW-B-SL029-A (SD)/ 280-148576-1MSD | Aluminum | 284.3 | 74 - 119 | 10 - 200 | percent | J/None | M | |
| NYOW-B-SL029-A (SD)/ 280-148576-1MSD | Iron | 276.5 | 81 - 118 | 10 - 200 | percent | J/None | M | |
| NYOW-B-SL029-A (SD)/ 280-148576-1MSD | Manganese | 195.7 | 84 - 114 | 10 - 200 | percent | J/None | M | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the MS Recovery for SW6010C**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL029-A | N | Aluminum | 48.0 | 3000 J1 | 3000 J | | mg/kg | M/M2 |
| NYOW-B-SL029-A | N | Iron | 77.0 | 3000 J1 | 3000 J | | mg/kg | M/M2 |
| NYOW-B-SL029-A | N | Manganese | 4.30 | 53.0 J1 | 53.0 J | + | mg/kg | M |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Total, Equipment Blank**

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| EB-01_210512 (EB)/ 280-148576-16 | Barium | 0.8400 | < 0.82 | < 10 | ug/l | U/None* | V | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6020A, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| MB 280-537092/1-A (LB)/ MB 280-537092/1-A | Thallium | 0.01160 | < 0.0035 | < 0.1 | mg/kg | U/None* | L | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

**Reason Code Definitions**

| Code | Definition |
|---|---|
| B2 | CCB |
| C | LCS Recovery |
| H1 | Test Hold Time |
| I | Surrogate recovery outside project limits. |
| L | Lab Blank |
| M | MS Recovery |
| M2 | Post Spike |
| TR | Trace Level Detect |
| V | Equipment Blank |
| V6 | Low Level Calibration Verification |
| Z | LCS RPD |

**Flag Code and Definitions**

| Flag | Definition |
|---|---|
| J | Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria. |
| U | Undetected: The analyte was analyzed for, but not detected. |
| UJ | The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria. |

**Bias**

| | |
|---|---|
| - | The result may be biased low |
| + | The result may be biased high |

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

**Review Questions**

Method: BNASIMD (GC/MS-SIM Analysis by SW8270D)

| Review Questions | Yes | No | NA | Comment |
|---|---|---|---|---|
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the GC/MS system properly tuned based on method criteria? | • | | | |
| Was instrument tuning completed every 12 hours during sample analysis? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | • | | | |
| Were Internal Standard retention times and area criteria within method requirements? | • | | | |
| Were internal standards spiked for every sample, standard, and QC sample? | • | | | |
| Were surrogate recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | • | | | |
| Were target analytes in the field blank less than MDL? | • | | | |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was the LCS/LCSD RPD within project acceptance limits? | | • | | See QC Outliers. |
| Was a MS/MSD pair prepared with each batch? | | • | | MS/SD not performed for aqueous batch 536584. |
| Were MS/MSD recoveries within project acceptance limits? | • | | | |
| Was the MS/MSD RPD within project acceptance limits? | • | | | |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | | | • | |
| Were QAPP specified laboratory PQLs achieved? | • | | | |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | • | | | |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

**Review Questions**

| Method: SW6010C (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | | • | | CCVL 280-537914/72 and CCVL 280-537914/86 exhibited recoveries greater than 120% for lead at 121% and 125%, respectively. Lead concentrations below the level of the CCV are qualified as "J+". |
| Were ICB/CCBs run at the required frequency and within acceptance criteria? | • | | | |
| Did the ICSA have any non-target interferents above the MDL? | • | | | The ICSA associated with batch 280-537914 had results Ba greater than the LOD. The initial ICSA result (13.5 ppb) was > LOD (2 ppb) for Ba. The laboratory confirmed using MS that Ba is a trace impurity in the ICSA standard.<br><br>The ICSA associated with batch 280-537422 had results for Ba > LOD. The initial ICSA result (13.3 ppb) was > LOD (2 ppb) for Ba. The laboratory confirmed using MS that Ba is a trace impurity in the ICSA standard at 12.4 ppb. |
| Were the ICSA/ICSAB recoveries within QAPP acceptance limits? | • | | | |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | | • | | MB 280-537091/1-A exhibited detections below the LOQ, Mn = 0.116 mg/kg, Zn = 0.543 mg/kg. The associated sample results were > LOQ; qualification is not necessary on the basis of professional judgment. |
| Were target analytes in the field blank less than MDL? | | • | | EB-01_210512 exhibited a detection for barium at 0.84 ug/L. Soil sample results are not qualified on this basis. |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | • | | | |
| Was the LCS/LCSD RPD within project acceptance limits? | • | | | |
| Was a MS/MSD pair prepared with each batch? | | • | | Aqueous MS/SD not performed. |
| Were MS/MSD recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was the MS/MSD RPD within project acceptance limits? | • | | | |
| Were the post spike recoveries within project acceptance limits? | | • | | Al = 54%, Fe = 55%. |

**Review Questions**

| Method: SW6010C (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Were the serial dilution RPD values within project acceptance limits? | • | | | |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | | | • | |
| Were QAPP specified laboratory PQLs achieved? | | • | | Cobalt LOQs were slightly greater than PQLGs due to percent moisture adjustments. |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | • | | | |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

**Review Questions**

| Method: SW6020A (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |

| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | • | | | |
| Were ICB/CCBs run at the required frequency and within acceptance criteria? | | • | | ICB 280-537459/12 exhibited a detection for thallium below the LOQ at 0.101 ug/L. CCBs 280-537459/99 and /109 exhibited detections for thallium less than the LOQ at 0.102 ug/L and 0.109 ug/L. The associated equipment blank sample result was ND; qualification is not required.<br>CCBs 280-537916/105 and 280-537916/114 exhibited detections for thallium below the LOQ at 0.101 ug/L and 0.0920 ug/L. The associated sample results were previously qualified; no further action is necessary.<br>CCB 280-537917/47 exhibited a detection below the LOQ for Sb at 0.543 ug/L. The bracketing samples with results less than the LOQ are qualified as "U" at the LOD or LOQ. |
| Did the ICSA have any non-target interferents above the MDL? | • | | | The ICSA associated with batch 280-537459 had results Cr greater than the LOD. The initial ICSA result (2.17 ppb) was > LOD (1.8 ppb) for Cr, and the closing ICSA result (2.12 ppb) was > LOD (1.8 ppb) for Cr. The vendor acknowledges Cr as a trace impurity. |
| Were the ICSA/ICSAB recoveries within QAPP acceptance limits? | • | | | |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | | • | | MB 280-537092/1-A, Tl detected below the LOQ at 0.0116 mg/kg. The associated sample results less than the LOQ are qualified as "U" at the LOQ. |
| Were target analytes in the field blank less than MDL? | • | | | |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | • | | | |
| Was the LCS/LCSD RPD within project acceptance limits? | • | | | |
| Was a MS/MSD pair prepared with each batch? | | • | | An aqueous MS/SD was not performed. |

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP, Remedial Investigation/Feasibility Study, New York Ordnance Works and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bluestone Environmental Group, Inc., Malvern, PA; analyses were performed by Eurofins Environment Testing TestAmerica, Arvada, CO and were reported under sample delivery group (SDG) 280-148628-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 146 results (14.91%) out of the 979 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

The samples arrived in good condition, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 0.7ºC, 2.0ºC, 3.5ºC, 3.6º C, 3.7ºC, 4.8ºC and 5.3ºC. Samples sent to Eurofins Lancaster Laboratory arrived at temperatures of 3.3ºC and 3.2ºC.
The container label for the following sample did not match the information listed on the COC: SL-DUP-001_210513. The date at end of sample ID was written in different order on containers. The sample was logged in accordance with the COC.

The reporting limits have been adjusted accordingly. |

August 17, 2021

Reviewed by Emily Strake, Technical Director/ Data Validator, Bluestone

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

**Quality Control Outliers for test method BNASIMD, Continuing Calibration Verification**

Compliance requirements for satisfactory continuing calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data. Continuing calibration is performed to verify and evaluate instrument performance during sample analysis. Summary forms were evaluated against project acceptance criteria, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| CCV 280-538035/3 (CV) | Indeno(1,2,3-c,d)pyrene | 123.3 | 80 - 120 | 50 - 150 | % | J/UJ | V2 | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the Continuing Calibration Verification for BNASIMD**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, Field Duplicate RPD**

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| PH-DUP-002_210513 (N)/ 280-148628-21 | Benzo (a)anthracene | 200.0 | < 50 | < 50 | rpd | J/None | D3 | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method BNASIMD, LCS Recovery**

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| LCSD 280-536584/3-A (BD)/ LCSD 280-536584/3-A | Benzo (a)anthracene | 122.2 | 59 - 120 | 10 - 200 | percent | J/None | C | |
| LCSD 280-536584/3-A (BD)/ LCSD 280-536584/3-A | Chrysene | 124.4 | 57 - 120 | 10 - 200 | percent | J/None | C | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the LCS Recovery for BNASIMD**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-WL031-A | N | Benzo(a)anthracene | 0.120 | 0.0700 J M Q | 0.0700 J | + | ug/l | C/Z/TR |
| NYOW-B-WL031-A | N | Chrysene | 0.120 | 0.0940 J Q | 0.0940 J | + | ug/l | C/Z/TR |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, LCS RPD**

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|

**Quality Control Outliers for test method BNASIMD, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the MS Recovery for BNASIMD**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH018-B | N | Chrysene | 12.0 | 3.60 J | 3.60 J | - | ug/kg | TR/M |
| PH-DUP-001_210513 | FD | Chrysene | 11.0 | 3.90 J J1 | 3.90 J | - | ug/kg | TR/M |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, Surrogate**

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-WL001-A (N)/ 280-148628-16 | Terphenyl-d14 | 57.00 | 58 - 132 | 10 - 132 | percent | J/UJ | I | |
| NYOW-B-WL004-A (N)/ 280-148628-5 | Terphenyl-d14 | 54.00 | 58 - 132 | 10 - 132 | percent | J/UJ | I | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| MB 280-537681/1-A (LB)/ MB 280-537681/1-A | Aluminum | 1.630 | < 1.6 | < 50 | mg/kg | U/None* | L | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6010C, LCS Recovery**

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| LCS 280-537681/2-A (BS)/ LCS 280-537681/2-A | Cobalt | 84.70 | 85 - 112 | 10 - 200 | percent | J/UJ | C | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Low Level Calibration Verification**

Compliance requirements for satisfactory low level calibration verification is established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data. Continuing calibration is performed to verify and evaluate instrument performance during sample analysis. Summary forms were evaluated against project acceptance criteria, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| CCVL 280-5 (LV)/ 280-148628-2 | Lead | 125.0 | 80 - 120 | 80 - 120 | % | J/None | V6 | |
| CCVL 280-5 (LV)/ 280-148628-2MS | Lead | 125.0 | 80 - 120 | 80 - 120 | % | J/None | V6 | |
| CCVL 280-5 (LV)/ 280-148628-2MSD | Lead | 125.0 | 80 - 120 | 80 - 120 | % | J/None | V6 | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the Low Level Calibration Verification for SW6010C**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL016-A | N | Lead | 1.00 | 2.70 J1 | 2.70 J | + | mg/kg | D/V6 |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL016-A (MS)/ 280-148628-2MS | Manganese | 121.8 | 84 - 114 | 10 - 200 | percent | J/None | M | |
| NYOW-B-SL016-A (MS)/ 280-148628-2MS | Potassium | 122.4 | 81 - 116 | 10 - 200 | percent | J/None | M | |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW7470A, Total, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| MB 280-537553/1-A (LB)/ MB 280-537553/1-A | Mercury | 0.04070 | < 0.027 | < 0.2 | ug/l | U/None* | L | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW7471B, Total, Field Duplicate RPD**

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| PH-DUP-001_210513 (N)/ 280-148628-19 | Mercury | 200.0 | < 50 | < 50 | rpd | J/None | D3 | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW9060A, Field Duplicate RPD**

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

**Table of Results with Modified Qualifiers**

**Modified Qualifiers for test method SW9060A**

| FieldSample ID / LabSample ID | Type | Analyte | LOQ | Lab Result | ADR Result | Modified Result | Reason |
|---|---|---|---|---|---|---|---|
| SL-DUP-001_210513 280-148628-13 | FD | Total Organic Carbon | 2000 | 21000 H | 21000 J | 21000 J | D3/H1 |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

**Reason Code Definitions**

| Code | Definition |
|---|---|
| B2 | CCB |
| C | LCS Recovery |
| D | MS RPD |
| D3 | Field Duplicate RPD |
| H1 | Test Hold Time |
| I | Surrogate recovery outside project limits. |
| L | Lab Blank |
| M | MS Recovery |
| M2 | Post Spike |
| TR | Trace Level Detect |
| V | Equipment Blank |
| V2 | CCV |
| V6 | Low Level Calibration Verification |
| Z | LCS RPD |

**Flag Code and Definitions**

| Flag | Definition |
|---|---|
| J | Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria. |
| U | Undetected: The analyte was analyzed for, but not detected. |
| UJ | The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria. |

**Bias**

| | |
|---|---|
| - | The result may be biased low |
| + | The result may be biased high |

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

**Review Questions**

| Method: BNASIMD (GC/MS-SIM Analysis by SW8270D) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | See SDG Comments. |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the GC/MS system properly tuned based on method criteria? | • | | | |
| Was instrument tuning completed every 12 hours during sample analysis? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | | • | | CCV 280-538035/3 exhibited a %D > 20% for indeno(1,2,3-cd)pyrene at 23.3%. |
| Were Internal Standard retention times and area criteria within method requirements? | • | | | |
| Were internal standards spiked for every sample, standard, and QC sample? | • | | | |
| Were surrogate recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | • | | | |
| Were target analytes in the field blank less than MDL? | • | | | |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was the LCS/LCSD RPD within project acceptance limits? | | • | | See QC Outliers. |
| Was a MS/MSD pair prepared with each batch? | • | | | |
| Were MS/MSD recoveries within project acceptance limits? | | • | | See QC Outliers for aqueous MS/SD recoveries. MS sample PH-DUP-001_210513 exhibited a recovery less than 57% for chrysene at 56%. |
| Was the MS/MSD RPD within project acceptance limits? | • | | | |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | • | | | |
| Were QAPP specified laboratory PQLs achieved? | | • | | Multiple LOQs for PAHs did not meet PQLGs for aqueous samples. |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | | • | | CCV CAs not performed. |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

**Review Questions**

| Method: SW6010C (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | See SDG Comments. |

| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | | • | | See QC Outliers. |
| Were ICB/CCBs run at the required frequency and within acceptance criteria? | • | | | |
| Did the ICSA have any non-target interferents above the MDL? | • | | | The ICSA associated with batch 280-537919 had results for Ba at a level greater than the LOD. The initial ICSA result (13.5 ppb) was > LOD (2 ppb).<br>The ICSA associated with batch 280-536996 had results for Ba at a level greater than the LOD. The initial ICSA result (13.118 ppb) was > LOD (2 ppb).<br>The ICSA associated with batch 280-537914 had results for Ba at a level greater than the LOD. The initial ICSA result (13.5 ppb) was > LOD (2 ppb).<br>The laboratory has confirmed via ICP-MS that Ba is a trace impurity in the ICSA standard at 12.4 ppb. |
| Were the ICSA/ICSAB recoveries within QAPP acceptance limits? | • | | | |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | | • | | See QC Outliers. Associated sample results for Al were greater than the LOQ. On the basis of professional judgment, qualification is not necessary. |
| Were target analytes in the field blank less than MDL? | | • | | See QC Outliers. The results of an aqueous field blank are not used to assess soil cross-contamination. |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was the LCS/LCSD RPD within project acceptance limits? | • | | | |
| Was a MS/MSD pair prepared with each batch? | | • | | MS/SD not performed to aqueous batch 537668. |
| Were MS/MSD recoveries within project acceptance limits? | | • | | See QC Outliers.<br>MS recovery of sodium for sample NYOW-B-SL016-A is within acceptance criteria (83%). |
| Was the MS/MSD RPD within project acceptance limits? | | • | | See QC Outliers. |

**Review Questions**

Method: SW6010C (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)

| Review Questions | Yes | No | NA | Comment |
|---|---|---|---|---|
| Were the post spike recoveries within project acceptance limits? | | • | | PDS recoveries for sample NYOW-B-SL016-A were < 80% for al (30%), Fe (-85%), and Mn (-20%). The results for Mn are qualified as "J". For al and Fe, the sample concentration was greater than 4X the spiked amount in the MS. |
| Were the serial dilution RPD values within project acceptance limits? | • | | | |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | | • | | See QC Outliers. Sodium results for PH-DUP-002_210513 sample pair do not exceed RPD requirements; both results were below the LOQ. |
| Were QAPP specified laboratory PQLs achieved? | | • | | Soil LOQs for cobalt were slightly greater than PQLGs due to percent moisture adjustments. |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | • | | | |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP, Remedial Investigation/Feasibility Study, New York Ordnance Works and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bluestone Environmental Group, Inc., Malvern, PA; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 280-148677-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 55 results (16.47%) out of the 334 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

The samples arrived in good condition, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.8º C and 1.8º C. Samples were subcontracted to Eurofins Lancaster Laboratory Environmental for TOC analysis and received at a temperature of 3.2ºC and 4.6ºC.
The TOC container for sample NYOW-B-PH020-C was received at Lancaster broken; however the sample was not compromised and was placed in another container.

| Analytical Method | Data Reviewer Comment |
|---|---|
| BNASIMD | No additional comments; see Checklist for detail. |
| SW6010C | No additional comments; see Checklist for detail. |
| SW6020A | No additional comments; see Checklist for detail. |
| SW7470A | No additional comments; see Checklist for detail. |
| SW7471B | No additional comments; see Checklist for detail. |
| SW9060A | Samples NYOW-B-SL020-A[4X], NYOW-B-PH020-B[3.68X] and NYOW-B-PH020-C[3.91X] required dilution prior to analysis. The reporting limits have been adjusted accordingly. |

Reviewed by Emily Strake, Technical Director/ Data Validator, Bluestone

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

**Quality Control Outliers for test method BNASIMD, LCS Recovery**

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| LCS 280-536729/2-A (BS)/ LCS 280-536729/2-A | Fluorene | 49.33 | 50 - 118 | 10 - 200 | percent | J/UJ | C | |
| LCSD 280-536584/3-A (BD)/ LCSD 280-536584/3-A | Benzo (a)anthracene | 122.2 | 59 - 120 | 10 - 200 | percent | J/None | C | |
| LCSD 280-536584/3-A (BD)/ LCSD 280-536584/3-A | Chrysene | 124.4 | 57 - 120 | 10 - 200 | percent | J/None | C | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the LCS Recovery for BNASIMD**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-WL003-A | N | Fluorene | 0.100 | 0.0420 U Q | 0.0420 UJ | | ug/l | C |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance. In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, LCS RPD**

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| LCSD 280-536584/3-A (BD)/ LCSD 280-536584/3-A | 1-Methylnaphthalene | 0.4610 | < 0.1 | < 0.1 | ug/l | J/None | Z | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the LCS RPD for BNASIMD**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-WL002-A | N | Acenaphthylene | 0.100 | 0.0300 J Q | 0.0300 J | | ug/l | Z/TR |
| NYOW-B-WL002-A | N | Acenaphthene | 0.100 | 0.0130 J Q | 0.0130 J | | ug/l | Z/TR |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance. In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, Surrogate**

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| WL-DUP-001_210514 (FD)/ 280-148677-2 | Terphenyl-d14 | 56.00 | 58 - 132 | 10 - 132 | percent | J/UJ | I | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the Surrogate for BNASIMD**

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the Field Duplicate RPD for SW6010C, Dissolved**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| WL-DUP-001_210514 | FD | Iron | 100 | 130 | 130 J | + | ug/l | V/D3 |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance. In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| MB 280-537813/1-A (LB)/ MB 280-537813/1-A | Zinc | 0.4450 | < 0.4 | < 8 | mg/kg | U/None* | L | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6010C, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL020-A (MS)/ 280-148677-4MS | Aluminum | 229.3 | 74 - 119 | 10 - 200 | percent | J/None | M | |
| NYOW-B-SL020-A (MS)/ 280-148677-4MS | Manganese | 49.59 | 84 - 114 | 10 - 200 | percent | J/UJ | M | |
| NYOW-B-SL020-A (SD)/ 280-148677-4MSD | Aluminum | 331.4 | 74 - 119 | 10 - 200 | percent | J/None | M | |
| NYOW-B-SL020-A (SD)/ 280-148677-4MSD | Manganese | 60.78 | 84 - 114 | 10 - 200 | percent | J/UJ | M | |
| NYOW-B-SL020-A (SD)/ 280-148677-4MSD | Iron | 350.0 | 81 - 118 | 10 - 200 | percent | J/None | M | Spike amount Insignificant |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the MS Recovery for SW6010C**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL020-A | N | Aluminum | 55.0 | 2900 J1 | 2900 J | | mg/kg | M/M2/A |
| NYOW-B-SL020-A | N | Manganese | 4.90 | 330 J1 | 330 J | - | mg/kg | M/M2 |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance. In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Total, Equipment Blank**

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

**Qualified Results associated with the Equipment Blank for SW6010C, Total**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-WL003-A | N | Barium | 10.0 | 28.0 Q | 28.0 J | + | ug/l | V |
| NYOW-B-WL003-A | N | Iron | 100 | 33.0 J | 85.0 U | | ug/l | V |
| WL-DUP-001_210514 | FD | Barium | 10.0 | 27.0 Q | 27.0 J | + | ug/l | V |
| WL-DUP-001_210514 | FD | Iron | 100 | 130 | 130 J | + | ug/l | V/D3 |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance. In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6020A, Dissolved, Field Duplicate RPD**

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| WL-DUP-001_210514 (N)/ 280-148677-2 | Lead | 200.0 | < 30 | < 30 | rpd | J/None | D3 | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6020A, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| MB 280-537814/1-A (LB)/ MB 280-537814/1-A | Thallium | 0.003800 | < 0.0035 | < 0.1 | mg/kg | U/None* | L | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

**Qualified Results associated with the Lab Blank for SW6020A**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-PH020-B | N | Thallium | 0.120 | 0.0590 J | 0.120 U | | mg/kg | L |
| NYOW-B-PH020-C | N | Thallium | 0.110 | 0.0340 J | 0.110 U | | mg/kg | L |
| NYOW-B-SL020-A | N | Thallium | 0.130 | 0.0580 J | 0.130 U | | mg/kg | L |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance. In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6020A, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL020-A (SD)/ 280-148677-4MSD | Arsenic | 80.79 | 82 - 118 | 10 - 200 | percent | J/UJ | M | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the MS Recovery for SW6020A**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL020-A | N | Arsenic | 0.770 | 2.90 J1 | 2.90 J | - | mg/kg | M |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance. In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW7470A, Total, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| MB 280-537553/1-A (LB)/ MB 280-537553/1-A | Mercury | 0.04070 | < 0.027 | < 0.2 | ug/l | U/None* | L | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the inital sample concentration or validation guideance.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

**Reason Code Definitions**

| Code | Definition |
|---|---|
| A | Serial dilution |
| B2 | CCB |
| C | LCS Recovery |
| D3 | Field Duplicate RPD |
| H1 | Test Hold Time |
| I | Surrogate recovery outside project limits. |
| L | Lab Blank |
| M | MS Recovery |
| M2 | Post Spike |
| TR | Trace Level Detect |
| V | Equipment Blank |
| V6 | Low Level Calibration Verification |
| Z | LCS RPD |

**Flag Code and Definitions**

| Flag | Definition |
|---|---|
| J | Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria. |
| U | Undetected: The analyte was analyzed for, but not detected. |
| UJ | The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria. |

**Bias**

| | |
|---|---|
| - | The result may be biased low |
| + | The result may be biased high |

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

| Review Questions | Yes | No | NA | Comment |
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the GC/MS system properly tuned based on method criteria? | • | | | |
| Was instrument tuning completed every 12 hours during sample analysis? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | • | | | |
| Were Internal Standard retention times and area criteria within method requirements? | • | | | |
| Were internal standards spiked for every sample, standard, and QC sample? | • | | | |
| Were surrogate recoveries within project acceptance limits? | | • | | See QC Outliers. Sample outside of 2X hold time; therefore, RE/RA was not performed. |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | • | | | |
| Were target analytes in the field blank less than MDL? | • | | | |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was the LCS/LCSD RPD within project acceptance limits? | | • | | See QC Outliers. |
| Was a MS/MSD pair prepared with each batch? | | • | | No MS/SDs were performed. |
| Were MS/MSD recoveries within project acceptance limits? | | | • | |
| Was the MS/MSD RPD within project acceptance limits? | | | • | |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | • | | | |
| Were QAPP specified laboratory PQLs achieved? | | • | | LOQs were slightly greater than PQLGs for several PAHs associated with aqueous sample WL-DUP-001_210514. |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | • | | | |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

**Review Questions**

Method: SW6010C (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)

| Review Questions | Yes | No | NA | Comment |
|---|---|---|---|---|
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | | • | | ICVL 280-538281/12 exhibited recoveries > 120% for Fe and Pb at 126% and 121%. The sample results for iron were greater than the level of the CCV. The sample results for Pb are qualified as "J+". |
| Were CCVs run at the required frequency and within acceptance criteria? | | • | | CCVL 280-537914/21, CCVL 280-537914/33, and CCVL 280-537914/46 exhibited recoveries less than 80% for Se at 78%, 75%, and 75%. The associated EB sample result was non-detect and is qualified as "UJ".<br>CCVL 280-538281/199, CCVL 280-538281/211, and<br>CCVL 280-538281/222 exhibited recover greater than 120% for iron at 125%, 124%, and 124%. The sample results for iron were greater than the level of the CCV.<br>CCVL 280-538281/199 exhibited a recovery greater than 20% for lead at 134%. The results less than the level of the CCV are qualified as "J +". |
| Were ICB/CCBs run at the required frequency and within acceptance criteria? | | • | | CCB 280-538281/210 exhibited a detection for Be below the LOQ at 0.196 ug/L. The associated sample results below the aqueous LOQ are qualified as "U". |
| Did the ICSA have any non-target interferents above the MDL? | • | | | The ICSA associated with batch 280-538281 had results for Ba at a level greater than the LOD. The initial ICSA result (13 ppb) was > LOD (2 ppb).<br>The ICSA associated with batch 280-537936 had results for Ba at a level<br>greater than the LOD. The initial ICSA result (13.5ppb) was > LOD (2 ppb).<br>The ICSA associated with batch 280-537914 had results for Ba at a level greater than the LOD. The initial ICSA result(13.5 ppb) was > LOD (2 ppb). |
| Were the ICSA/ICSAB recoveries within QAPP acceptance limits? | • | | | |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | | • | | MB 280-537813/1-A exhibited a detection for zinc below the LOQ at 0.445 mg/kg. The associated soil sample results were greater than the LOQ. On the basis of professional judgment, qualification is not necessary. |
| Were target analytes in the field blank less than MDL? | | • | | See QC Outliers. |
| Was the laboratory duplicate RPD within project acceptance limits? | | | • | |

**Review Questions**

| Method: SW6010C (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Were LCS/LCSD recoveries within project acceptance limits? | • | | | |
| Was the LCS/LCSD RPD within project acceptance limits? | • | | | |
| Was a MS/MSD pair prepared with each batch? | | • | | Aqueous MS/SD not performed. |
| Were MS/MSD recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was the MS/MSD RPD within project acceptance limits? | • | | | |
| Were the post spike recoveries within project acceptance limits? | | • | | NYOW-B-SL020-A exhibited PDS recoveries less than lower control limits for Al (44%), Fe (-51%), Mn (-27%), and Silver (73%). A PDS is not required for silver. The iron sample concentration was >4X the spiked amount for the MS/SD. The result for Mn is qualified as "J-" and the result for Al is qualified as "J". |
| Were the serial dilution RPD values within project acceptance limits? | | • | | NYOW-B-SL020-A exhibited RPDs > 10% for Al (34%) and Fe (35%). NYOW-B-SL020-A and results for samples of similar matrix are qualified as "J": NYOW-B-PH020-B and NYOW-B-PH020-C. |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | | • | | WL-DUP-001_210514 exhibited a RPD greater than 30% for dissolved iron at 200%. |
| Were QAPP specified laboratory PQLs achieved? | • | | | |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | • | | | |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP, Remedial Investigation/Feasibility Study, New York Ordnance Works and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bluestone Environmental Group, Inc., Malvern, PA; analyses were performed by Eurofins Environment Testing TestAmerica, Arvada, CO | Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 280-148718-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

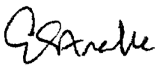
Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 51 results (7.07%) out of the 721 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

The samples arrived in good condition, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 1.9º C, 3.1º C, 3.6º C, 3.7º C and 4.7ºC. Samples were sent to Eurofins Lancaster Laboratory Environmental for TOC analysis and were received at temperatures of 3.3ºC, 3.2ºC, and 4.6ºC. The sample ID on 1/2 8oz containers for the following sample was written as "NYOW-B-PH00-B": NYOW-B-PH008-B. The sample was logged according to the COC.

| Analytical Method | Data Reviewer Comment |
|---|---|
| BNASIMD | No additional comments; see Checklist for detail. |
| SW6010C | No additional comments; see Checklist for detail. |
| SW6020A | No additional comments; see Checklist for detail. |
| SW7470A | No additional comments; see Checklist for detail. |
| SW7471B | No additional comments; see Checklist for detail. |
| SW9060A | Sample NYOW-B-PH014-C result exceeded calibration range. Sample was repeated out of hold on analytical batch 138452.The following samples were analyzed outside of analytical holding time due to an instrument issue that required the samples to be analyzed at another lab within the Eurofins network: NYOW-B-PH009-B, NYOW-B-PH009-C, NYOW-B-SL008-A, NYOW-B-PH008-B and NYOW-B-PH008-C.<br>Samples NYOW-B-SL014-A (280-148718-5)[1.12X], NYOW-B-PH014-B (280-148718-6) [1.59X], NYOW-B-PH014-C [1.53X], NYOW-B-PH014-C[4.64X], NYOW-B-SL010-A[1.85X], NYOW-B-SL010-A[2.46X], NYOW-B-SL010-A[2.91X], NYOW-B-PH010-B[1.83X], NYOW-B-PH010-C[1.52X], NYOW-B-SL009-A[3.1X], NYOW-B-PH009-B[3.67X], NYOW-B-PH009-C[4.07X], NYOW-B-SL008-A[9.82X], NYOW-B-PH008-B[2.32X] and NYOW-B-PH008-C [4.79X] required dilution prior to analysis. |



September 07, 2021

Reviewed by Emily Strake, Technical Director/ Data Validator, Bluestone

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

**Quality Control Outliers for test method BNASIMD, LCS Recovery**

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| LCS 280-536729/2-A (BS)/ LCS 280-536729/2-A | Fluorene | 49.33 | 50 - 118 | 10 - 200 | percent | J/UJ | C | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the LCS Recovery for BNASIMD**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, LCS RPD**

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| LCSD 280-536729/3-A (BD)/ LCSD 280-536729/3-A | 1-Methylnaphthalene | 0.2240 | < 0.1 | < 0.1 | ug/l | J/None | Z | |
| LCSD 280-536729/3-A (BD)/ LCSD 280-536729/3-A | Acenaphthene | 0.2240 | < 0.1 | < 0.1 | ug/l | J/None | Z | |
| LCSD 280-536729/3-A (BD)/ LCSD 280-536729/3-A | Acenaphthylene | 0.2150 | < 0.1 | < 0.1 | ug/l | J/None | Z | |
| LCSD 280-536729/3-A (BD)/ LCSD 280-536729/3-A | Fluorene | 0.2130 | < 0.1 | < 0.1 | ug/l | J/None | Z | |
| LCSD 280-536729/3-A (BD)/ LCSD 280-536729/3-A | Naphthalene | 0.2910 | < 0.1 | < 0.1 | ug/l | J/None | Z | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method BNASIMD, Surrogate**

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| EB-02_210517 (EB)/ 280-148718-17 | Fluoranthene-d10 | 129.0 | 57 - 105 | 10 - 105 | percent | J/None | I | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6010C, Dissolved, Equipment Blank**

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

**Table of Results with Modified Qualifiers**

**Modified Qualifiers for test method SW6010C, Dissolved**

| FieldSample ID / LabSample ID | Type | Analyte | LOQ | Lab Result | ADR Result | Modified Result | Reason |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

**Reason Code Definitions**

| Code | Definition |
|---|---|
| B2 | CCB |
| C | LCS Recovery |
| D2 | No precision available |
| H1 | Test Hold Time |
| I | Surrogate recovery outside project limits. |
| L | Lab Blank |
| TR | Trace Level Detect |
| V | Equipment Blank |
| V6 | Low Level Calibration Verification |
| Z | LCS RPD |

**Flag Code and Definitions**

| Flag | Definition |
|---|---|
| J | Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria. |

| | |
|---|---|
| U | Undetected: The analyte was analyzed for, but not detected. |
| UJ | The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria. |

| **Bias** | |
|---|---|
| - | The result may be biased low |
| + | The result may be biased high |
| Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result | |

**Review Questions**

| Method: BNASIMD (GC/MS-SIM Analysis by SW8270D) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the GC/MS system properly tuned based on method criteria? | • | | | |
| Was instrument tuning completed every 12 hours during sample analysis? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | • | | | |
| Were Internal Standard retention times and area criteria within method requirements? | • | | | |
| Were internal standards spiked for every sample, standard, and QC sample? | • | | | |
| Were surrogate recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | • | | | |
| Were target analytes in the field blank less than MDL? | • | | | |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was the LCS/LCSD RPD within project acceptance limits? | | • | | LCSD 280-536729/3-A RPD for naphthalene > 40% at 46%. The sample results were non-detect. |
| Was a MS/MSD pair prepared with each batch? | | • | | Aqueous MS/SD not performed. |
| Were MS/MSD recoveries within project acceptance limits? | • | | | |
| Was the MS/MSD RPD within project acceptance limits? | • | | | |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | | | • | |
| Were QAPP specified laboratory PQLs achieved? | | • | | Sample NYOW-B-WL005-A had LOQs slightly > PQLGs for several PAHs. |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | • | | | |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

**Review Questions**

| Method: SW6010C (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | • | | | See SDG Comments. |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | | • | | ICVL 280-538281/12 exhibited recoveries > 120% for Fe (126%) and Pb (21%). The results for iron were greater than the level of the CCV. The results for lead are qualified as "J+". |
| Were CCVs run at the required frequency and within acceptance criteria? | | • | | CCVL 280-537914/33 exhibited a recovery less than 80% for Se at 75%. CCVL 280-537914/46 exhibited a recovery < 80% for se at 75%. The associated EB sample result is qualified as "UJ". CCVL 280-537936/38 exhibited a recovery less than 80% for Se at 78%. The associated filtered aqueous sample results are qualified as "UJ". CCVL 280-538281/211 exhibited a recovery > 120% for fe at 124%. CCVL 280-538281/222 exhibited a recovery > Fe at 124%. CCVL 280-538281/233 exhibited recoveries > 120% for Ca and Fe at 124% and 128%. The associated sample results were greater than the level of the CCV. |
| Were ICB/CCBs run at the required frequency and within acceptance criteria? | | • | | CCB 280-538281/210 exhibited a detection below the LOQ for Be at 0.196 ug/L. CCB 280-538281/232 exhibited a detection below the LOQ for Be at 0.234 ug/L. The associated sample results less than the aqueous LOQ are qualified as "U". |
| Did the ICSA have any non-target interferents above the MDL? | • | | | The ICSA associated with batch 280-538281 had results for Ba at a level greater than the LOD. The initial ICSA result (13 ppb) was > LOD (2 ppb).The ICSA associated with batch 280-537936 had results for Ba at a level greater than the LOD. The initial ICSA result (13.5ppb) was > LOD (2 ppb).The ICSA associated with batch 280 -537914 had results for Ba at a level greater than the LOD. The laboratory has confirmed via ICP-MS that Ba is a trace impurity in the ICSA standard. |
| Were the ICSA/ICSAB recoveries within QAPP acceptance limits? | • | | | |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | | • | | See QC Outliers. |
| Were target analytes in the field blank less than MDL? | | • | | See QC Outliers |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | • | | | |
| Was the LCS/LCSD RPD within project acceptance limits? | • | | | |

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final UFP QAPP, Remedial Investigation/Feasibility Study, New York Ordnance Works and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bluestone Environmental Group, Inc., Malvern, PA; analyses were performed by Eurofins Environment Testing TestAmerica, Arvada, CO and were reported under sample delivery group (SDG) 280-148774-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 91 results (15.27%) out of the 596 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

The samples arrived in good condition, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 1.3ºC, 2.3ºC, 2.6ºC, 3.1ºC and 4.3ºC. Samples sent to Eurofins Lancaster Laboratory for TOC analysis were received at a temperature of 3.2ºC.
The container label for the following sample did not match the information listed on the COC: NYOW-B-PH006-B: 1/2 8 oz soil jars does not have a (-B) at the end of the sample ID on the label.

| Analytical Method | Data Reviewer Comment |
|---|---|
| BNASIMD | The following samples could not be thoroughly homogenized before sub-sampling was performed due to sample matrix:<br>NYOW-B-PH011-B, NYOW-B-PH007-B, NYOW-B-PH007-C, and NYOW-B-PH006-C. The samples were wet clay in preparation batch 280-536925.<br>The following sample formed emulsions during the extraction procedure: NYOW-B-WL010-A. The emulsions were broken up using the pour-back method for all three extractions preparation batch 280-536821.<br>Sample NYOW-B-WL010-A was brown in color and contained sediment.<br>A portion of the following sample was used for analysis, rather than testing the entire sample amount in the original container, due to the sample containing a good portion of sediment at the bottom of the container: NYOW-B-WL010-A. As such, the required solvent rinse of the original container could not be performed preparation batch 280-536821. |

Reviewed by Emily Strake, Technical Director/ Data Validator, Bluestone

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

**Quality Control Outliers for test method BNASIMD, Equipment Blank**

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

**Qualified Results associated with the Equipment Blank for BNASIMD**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-WL010-A | N | Chrysene | 0.130 | 0.0590 J Q | 0.130 U | | ug/l | V/L |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, Field Duplicate RPD**

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, LCS RPD**

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| LCSD 280-536821/3-A (BD)/ LCSD 280-536821/3-A | Benzo(a)pyrene | 0.1570 | < 0.1 | < 0.1 | ug/l | J/None | Z | |
| LCSD 280-536821/3-A (BD)/ LCSD 280-536821/3-A | Benzo (b)fluoranthene | 0.1440 | < 0.1 | < 0.1 | ug/l | J/None | Z | |
| LCSD 280-536821/3-A (BD)/ LCSD 280-536821/3-A | Benzo (g,h,i)perylene | 0.1050 | < 0.1 | < 0.1 | ug/l | J/None | Z | |
| LCSD 280-536821/3-A (BD)/ LCSD 280-536821/3-A | Benzo (k)fluoranthene | 0.1920 | < 0.1 | < 0.1 | ug/l | J/None | Z | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method BNASIMD, MS Recovery**

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL006-A (MS)/ 280-148774-10MS | Chrysene | 52.63 | 57 - 118 | 10 - 200 | percent | J/UJ | M | |
| NYOW-B-SL006-A (MS)/ 280-148774-10MS | Fluoranthene | 53.88 | 55 - 119 | 10 - 200 | percent | J/UJ | M | |
| NYOW-B-SL006-A (SD)/ 280-148774-10MSD | Benzo (k)fluoranthene | 54.21 | 56 - 123 | 10 - 200 | percent | J/UJ | M | |
| NYOW-B-SL006-A (SD)/ 280-148774-10MSD | Chrysene | 45.93 | 57 - 118 | 10 - 200 | percent | J/UJ | M | |
| NYOW-B-SL006-A (SD)/ 280-148774-10MSD | Fluoranthene | 44.57 | 55 - 119 | 10 - 200 | percent | J/UJ | M | |
| NYOW-B-SL006-A (SD)/ 280-148774-10MSD | Pyrene | 52.10 | 55 - 117 | 10 - 200 | percent | J/UJ | M | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the MS Recovery for BNASIMD**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL006-A | N | Chrysene | 13.0 | 22.0 J1 | 22.0 J | - | ug/kg | M |
| NYOW-B-SL006-A | N | Fluoranthene | 13.0 | 34.0 J1 | 34.0 J | - | ug/kg | M |
| NYOW-B-SL006-A | N | Benzo(k)fluoranthene | 13.0 | 15.0 M J1 | 15.0 J | - | ug/kg | M |
| NYOW-B-SL006-A | N | Pyrene | 13.0 | 29.0 J1 | 29.0 J | - | ug/kg | M |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method BNASIMD, Surrogate**

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| EB-01_210518 (EB)/ 280-148774-13 | 2-Fluorobiphenyl | 47.00 | 53 - 106 | 10 - 106 | percent | J/UJ | I | |
| EB-01_210518 (EB)/ 280-148774-13 | Nitrobenzene-d5 | 50.00 | 55 - 111 | 10 - 111 | percent | J/UJ | I | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Dissolved, Equipment Blank**

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| EB-01_210518 (EB)/ 280-148774-13 | Zinc | 4.500 | < 4.5 | < 150 | ug/l | U/None* | V | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

**Quality Control Outliers for test method SW6010C, Lab Blank**

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW6010C, Total, Equipment Blank**

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

**Quality Control Outliers for test method SW9060A, MS RPD**

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

| Sample ID/ Lab Sample ID | Analyte | Result | Warning Limits | Control Limits | Units | Qualifier | Reason Code | Comment |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL006-A (SD)/ 280-148774-10MSD | Total Organic Carbon | 21.98 | < 20 | < 20 | rpd | J/UJ | D | |

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

**Qualified Results associated with the MS RPD for SW9060A**

| FieldSample ID | Type | Analyte | LOQ | Lab Result | Qualified Result | Bias | Units | Reason |
|---|---|---|---|---|---|---|---|---|
| NYOW-B-SL006-A | N | Total Organic Carbon | 2100 | 8800 H J1 | 8800 J | - | mg/kg | D/H1 |

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

**Reason Code Definitions**

| Code | Definition |
|---|---|
| B2 | CCB |
| C | LCS Recovery |
| D | MS RPD |
| D3 | Field Duplicate RPD |
| H1 | Test Hold Time |
| I | Surrogate recovery outside project limits. |
| L | Lab Blank |
| M | MS Recovery |
| TR | Trace Level Detect |
| V | Equipment Blank |
| V6 | Low Level Calibration Verification |
| Z | LCS RPD |

**Flag Code and Definitions**

| Flag | Definition |
|---|---|
| J | Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria. |
| U | Undetected: The analyte was analyzed for, but not detected. |
| UJ | The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria. |

**Bias**

| | |
|---|---|
| - | The result may be biased low |
| + | The result may be biased high |

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

**Review Questions**

Method: BNASIMD (GC/MS-SIM Analysis by SW8270D)

| Review Questions | Yes | No | NA | Comment |
|---|---|---|---|---|
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | | • | | See SDG Comments. |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the GC/MS system properly tuned based on method criteria? | • | | | |
| Was instrument tuning completed every 12 hours during sample analysis? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | • | | | |
| Were Internal Standard retention times and area criteria within method requirements? | • | | | |
| Were internal standards spiked for every sample, standard, and QC sample? | • | | | |
| Were surrogate recoveries within project acceptance limits? | | • | | See QC Outliers.<br>These samples are outside of hold and were not sent for re-extraction. |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | | • | | See QC Outliers. |
| Were target analytes in the field blank less than MDL? | | • | | See QC Outliers. |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was the LCS/LCSD RPD within project acceptance limits? | | • | | See QC Outliers. |
| Was a MS/MSD pair prepared with each batch? | | • | | Aqueous MS/SD not performed. |
| Were MS/MSD recoveries within project acceptance limits? | | • | | See QC Outliers. |
| Was the MS/MSD RPD within project acceptance limits? | • | | | |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | | • | | PH-DUP-001_210518, Chrysene RPD = 126%. NYOW-B-SL007-A, B(a)P RPD = 111%, B(b)F RPD = 109%, fluoranthene RPD = 127%, pyrene RPD = 124%. |
| Were QAPP specified laboratory PQLs achieved? | | • | | The EB and sample NYOW-B-WL010-A had LOQs slightly greater than PQLGs for several PAHs. |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | • | | | |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

**Review Questions**

| Review Questions | Yes | No | NA | Comment |
| Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests? | | • | | See SDG Comments. |
| Were samples preserved properly and received in good condition? | • | | | |
| Were holding times met? | • | | | |
| Were all requested target analytes reported? | • | | | |
| Was the system properly tuned based on method criteria? | • | | | |
| Was the Calibration within acceptance criteria? | • | | | |
| Were the required minimum levels of calibration standards used in the initial calibration? | • | | | |
| Was either analysis of an ICV performed after each ICAL or a second source standard prior to sample analysis? | • | | | |
| Were all reported analytes for the ICV within the required criteria? | • | | | |
| Were CCVs run at the required frequency and within acceptance criteria? | • | | | |
| Were ICB/CCBs run at the required frequency and within acceptance criteria? | | • | | ICB 280-538547/15 exhibited a detection for Sb at 0.643 ug/L. The associated filtered aqueous sample results were non-detect.<br>ICB 280-538767/39 exhibited a detection below the LOQ for Sb at 0.687 ug/L. CCB 280-538767/124 exhibited a detection for Sb at 0.400 ug/L. The associated positive detections were below the aqueous LOQ and were qualified as "U". |
| Did the ICSA have any non-target interferents above the MDL? | • | | | |
| Were the ICSA/ICSAB recoveries within QAPP acceptance limits? | • | | | |
| Was a method blank prepared and analyzed with each batch? | • | | | |
| Were target analytes in the method blank less than MDL? | | • | | MB 280-538044/1-A exhibited a detection for Sb below the LOQ at 0.935 ug/L. The associated sample results were non-detect. |
| Was the laboratory duplicate RPD within project acceptance limits? | | | • | |
| Was an LCS/LCSD pair prepared and analyzed with each batch? | • | | | |
| Were LCS/LCSD recoveries within project acceptance limits? | • | | | |
| Was the LCS/LCSD RPD within project acceptance limits? | • | | | |
| Was a MS/MSD pair prepared with each batch? | | • | | Aqueous MS/SD not performed. |
| Were MS/MSD recoveries within project acceptance limits? | • | | | |
| Was the MS/MSD RPD within project acceptance limits? | • | | | |
| If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits? | • | | | |
| Were the post spike recoveries within project acceptance limits? | • | | | |
| Were the serial dilution RPD values within project acceptance limits? | • | | | |

**Review Questions**

| Method: SW6020A (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry) | | | | |
|---|---|---|---|---|
| Review Questions | Yes | No | NA | Comment |
| Were QAPP specified laboratory PQLs achieved? | | • | | Soil LOQs for As, Sb, Se, and Tl were slightly greater than PQLGs due to percent moisture adjustments. |
| Have all Laboratory Case Narrative comments/findings been addressed in the data review process? | • | | | |
| Were DoD QSM corrective actions followed if deviations were noted? | • | | | |
| Were any data recommended for rejection (exclusion) in the data validation process? | | • | | |

**Review Questions**

| Method: SW7470A (Mercury in Water (Manual Cold-Vapor Technique)) | | | | |

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit
µg/L = microgram per liter

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

(a) EPA Residential Soil Regional Screening Level, May 2022 - Target Cancer Risk = 1E-06, Target Hazard Quotient = 0.1. (https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables)
(b) EPA Tapwater Regional Screening Level, May 2022 - Target Cancer Risk = 1E-06, Target Hazard Quotient = 0.1. (https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables)
(c) New York State Groundwater Standards, 6 NYCRR Part 703.5. Last updated March 2021. (https://www.dec.ny.gov/chemical/23853.html)

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation

mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Table 6

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation

mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Notes

| | |
|---|---|
| FOD = Frequency of Detection | mg/kg = milligram per kilogram |
| FOE = Frequency of Exceedance | N/A = Not Available |
| FOR = Frequency of Rejection | ND = Non-Detect |
| LOD = Limit of Detection | PAL = Project Action Limit |
| LOQ = Limit of Quantitation | µg/L = microgram per liter |

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

(a) EPA Residential Soil Regional Screening Level, May 2022 - Target Cancer Risk = 1E-06, Target Hazard Quotient = 0.1. (https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables)
(b) EPA Tapwater Regional Screening Level, May 2022 - Target Cancer Risk = 1E-06, Target Hazard Quotient = 0.1. (https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables)
(c) New York State Groundwater Standards, 6 NYCRR Part 703.5. Last updated March 2021. (https://www.dec.ny.gov/chemical/23853.html)

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Notes
FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Notes
FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.
(a) EPA Residential Soil Regional Screening Level, May 2022 - Target Cancer Risk = 1E-06, Target Hazard Quotient = 0.1. (https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables)

Notes

| | |
|---|---|
| FOD = Frequency of Detection | mg/kg = milligram per kilogram |
| FOE = Frequency of Exceedance | N/A = Not Available |
| FOR = Frequency of Rejection | ND = Non-Detect |
| LOD = Limit of Detection | PAL = Project Action Limit |
| LOQ = Limit of Quantitation | µg/L = microgram per liter |

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

(a) EPA Residential Soil Regional Screening Level, May 2022 - Target Cancer Risk = 1E-06, Target Hazard Quotient = 0.1. (https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables)
(b) EPA Tapwater Regional Screening Level, May 2022 - Target Cancer Risk = 1E-06, Target Hazard Quotient = 0.1. (https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables)
(c) New York State Groundwater Standards, 6 NYCRR Part 703.5. Last updated March 2021. (https://www.dec.ny.gov/chemical/23853.html)

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Notes

FOD = Frequency of Detection
FOE = Frequency of Exceedance
FOR = Frequency of Rejection
LOD = Limit of Detection
LOQ = Limit of Quantitation
mg/kg = milligram per kilogram
N/A = Not Available
ND = Non-Detect
PAL = Project Action Limit

Median Exceeds PAL

(1) FOD is the number of sample locations with a detection versus the number of sample locations without rejected data.
(2) FOR is the number of sample locations with rejected (R-qualified) data versus the number of sample locations.
(3) See Attachment A for receptor-specific PAL (or ecological screening value) selection tables.
(4) Summary statistics for the LOQ and LOD are calculated using only samples where the analyte was not detected.

Notes:
CASRN = Chemical Abstracts Service Registry Number
EcoSSL = Ecological Soil Screening Levels
EPA = Environmental Protection Agency
LANL = Los Alamos National Laboratory
mg/kg = milligram per kilogram
N/A = None Available or Not Applicable
RCRA = Resource Conservation and Recovery Act
UFP-QAPP = Uniform Federal Policy for Quality Assurance Project Plans
USACE = United States Army Corps of Engineers

LANL (2017) ECORISK Database Ecological Screening Levels (https://rais.ornl.gov/documents/ECO_BENCH_LANL.pdf)
Derived. USACE (2020) UFP QAPP - Former New York Ordnance Works - Appendix A.1. December 2020. Final.

2) Final screening values were selected using the following hierarchy: (1) EPA EcoSSLs, (2) EPA Region 4, (3) EPA Region 5, (4) LANL, and (5) Derived.

3) An aluminum concentration-based risk screening value is not available. As noted in the UFP-QAPP (USACE, 2020), aluminum toxicity is based on soil pH (EPA EcoSSL, 2003a).

4) An iron concentration-based risk screening value is not available. As noted in the UFP-QAPP (USACE, 2020), the main concern from an ecological risk perspective for iron is not direct chemical toxicity, but the effect of iron as a mediator in the geochemistry of other (potentially toxic) metals and the potential physical hazard of depositing flocculent. A determination of the geochemical conditions (i.e., pH and Eh at a minimum) of the environmental setting, as well as the presence of iron floc and the toxic metals, is critical to the determination of the relative importance of iron at a site (EPA EcoSSL, 2003b).

LANL (2017) ECORISK Database Ecological Screening Levels (https://rais.ornl.gov/documents/ECO_BENCH_LANL.pdf)
Derived. USACE (2020) UFP QAPP - Former New York Ordnance Works - Appendix A.1. December 2020. Final.

2) Final screening values were selected using the following hierarchy: (1) EPA EcoSSLs, (2) EPA Region 4, (3) EPA Region 5, (4) LANL, and (5) Derived.

3) An aluminum concentration-based risk screening value is not available. As noted in the UFP-QAPP (USACE, 2020), aluminum toxicity is based on soil pH (EPA EcoSSL, 2003a).

4) An iron concentration-based risk screening value is not available. As noted in the UFP-QAPP (USACE, 2020), the main concern from an ecological risk perspective for iron is not direct chemical toxicity, but the effect of iron as a mediator in the geochemistry of other (potentially toxic) metals and the potential physical hazard of depositing flocculent. A determination of the geochemical conditions (i.e., pH and Eh at a minimum) of the environmental setting, as well as the presence of iron floc and the toxic metals, is critical to the determination of the relative importance of iron at a site (EPA EcoSSL, 2003b).

EPA Region 4 (2018) Ecological Risk Assessment Supplemental Guidance. March. Table 3 - Soil Screening Values for Hazardous Waste Sites. (https://www.epa.gov/risk/regional-ecological-risk-assessment-era-supplemental-guidance)
EPA Region 5 (2003) RCRA Ecological Screening Levels (ESLs) (https://archive.epa.gov/region5/waste/cars/web/pdf/ecological-screening-levels-200308.pdf)
LANL (2017) ECORISK Database Ecological Screening Levels (https://rais.ornl.gov/documents/ECO_BENCH_LANL.pdf)
Derived. USACE (2020) UFP QAPP - Former New York Ordnance Works - Appendix A.1. December 2020. Final.

2) Final screening values were selected using the following hierarchy: (1) EPA EcoSSLs, (2) EPA Region 4, (3) EPA Region 5, (4) LANL, and (5) Derived.

3) An aluminum concentration-based risk screening value is not available. As noted in the UFP-QAPP (USACE, 2020), aluminum toxicity is based on soil pH (EPA EcoSSL, 2003a).

4) An iron concentration-based risk screening value is not available. As noted in the UFP-QAPP (USACE, 2020), the main concern from an ecological risk perspective for iron is not direct chemical toxicity, but the effect of iron as a mediator in the geochemistry of other (potentially toxic) metals and the potential physical hazard of depositing flocculent. A determination of the geochemical conditions (i.e., pH and Eh at a minimum) of the environmental setting, as well as the presence of iron floc and the toxic metals, is critical to the determination of the relative importance of iron at a site (EPA EcoSSL, 2003b).

LANL (2017) ECORISK Database Ecological Screening Levels (https://rais.ornl.gov/documents/ECO_BENCH_LANL.pdf)
Derived. USACE (2020) UFP QAPP - Former New York Ordnance Works - Appendix A.1. December 2020. Final.

2) Final screening values were selected using the following hierarchy: (1) EPA EcoSSLs, (2) EPA Region 4, (3) EPA Region 5, (4) LANL, and (5) Derived.

3) An aluminum concentration-based risk screening value is not available. As noted in the UFP-QAPP (USACE, 2020), aluminum toxicity is based on soil pH (EPA EcoSSL, 2003a).

4) An iron concentration-based risk screening value is not available. As noted in the UFP-QAPP (USACE, 2020), the main concern from an ecological risk perspective for iron is not direct chemical toxicity, but the effect of iron as a mediator in the geochemistry of other (potentially toxic) metals and the potential physical hazard of depositing flocculent. A determination of the geochemical conditions (i.e., pH and Eh at a minimum) of the environmental setting, as well as the presence of iron floc and the toxic metals, is critical to the determination of the relative importance of iron at a site (EPA EcoSSL, 2003b).

**Notes:**

AOC = area of concern
C = LCS recovery
D = MS RPD
D3 = field duplicate RPD
F1 = hydrocarbon pattern does not match standard
ft bgs = foot or feet below ground surface
H1 = test hold time
I = surrogate recovery
J = The reported result was an estimated value (+/- indicates a positive/negative bias).
LOQ = limit of quantitation
M = MS/MSD recovery
M2 = post spike
mg/kg = milligrams per kilogram
NA = not applicable
NJ = the Aroclor peak exhibited a marginal pattern-matching quality and is considered quantitatively and qualitatively estimated
P = sample preservation/collection requirement not met
P1 = column RPD
SO = soil
TR = trace level detect
U = receipt temperature
V2 = CCV
V6 = low level calibration verification
WG = groundwater
Z = LCS RPD

**Notes:**

AOC = area of concern

ft bgs = foot or feet below ground surface

LOQ = limit of quantitation

NA = not applicable

Notes
(1) For data sets with non-detect results, Kaplan-Meier (KM) statistical methods were used to derive means and summations.
(2) All units represented in milligrams per kilogram (mg/kg).
(3) **Bold** shaded results indicate a detection; non-detects censored at the limit of detection are noted in *italics* .

N/A = Not Applicable
PAH = Polycyclic Aromatic Hydrocarbon
-- = Not Evaluated

| PAH Abbreviations Used | |
|---|---|
| Benzo(a)anthracene = BaA | 1-Methylnaphthalene = 1MN |
| Benzo(a)pyrene = BaP | 2-Methylnaphthalene = 2MN |
| Benzo(b)fluoranthene = BbF | Acenaphthene = Acn |
| Benzo(g,h,i)perylene = BgP | Acenaphthylene = Acnthy |
| Benzo(k)fluoranthene = BkF | Anthracene = Anth |
| Chrysene = Chry | Fluoranthene = FlA |
| Dibenz(a,h)anthracene = DaA | Fluorene = Flu |
| Indeno(1,2,3-c,d)pyrene = InP | Naphthalene = Naph |
| Pyrene = Pyr | Phenanthrene = Phen |

Notes

| | |
|---|---|
| ND | ND at LOD |
| Detect | Detected result |

-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD.
However, the associated numerical value is approximate.

Notes

| | |
|---|---|
| ND | ND at LOD |
| Detect | Detected result |

-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD.
However, the associated numerical value is approximate.

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD.
However, the associated numerical value is approximate.

Qualifier Definitions
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD.
However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

Notes

| | |
|---|---|
| ND | ND at LOD |
| Detect | Detected result |

-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Notes

-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected

| | |
|---|---|
| ND | ND at LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions

J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Notes

| | |
|---|---|
| ND | ND at LOD |
| Detect | Detected result |

-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions

J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Qualifier Definitions

J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Detect — Detected result

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend
ND — ND at the LOD
Detect — Detected result

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions

J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend
ND — ND at the LOD
Detect — Detected result

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

Notes
-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend
ND — ND at the LOD
Detect — Detected result

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions
J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

Notes

-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions

J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

Notes

-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions

J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

Notes

-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions

J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

Notes

-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions

J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.

Notes

-- = Not Evaluated
C = Combined Primary/Field Duplicate Sample
CASRN = Chemical Abstracts Service Registry Number
LOD = Limit of Detection
mEQ/100g = millequivalents per 100 grams of soil
mg/kg = millgram per kilogram
N/A = Not Applicable
N = Primary Sample
ND = Non-Detect or Not Detected
SL = Screening Level
% = Percent

Legend

| | |
|---|---|
| ND | ND at the LOD |
| Detect | Detected result |

(1) See Section 4.0 for data reduction steps.

Qualifier Definitions

J – The reported result was an estimated value (+/- indicates a positive/negative bias).
U – The analyte was not detected and was reported as less than the limit of detection (LOD).
UJ – The analyte was not detected and was reported as less than the LOD. However, the associated numerical value is approximate.
R – The presence or absence of the analyte cannot be substantiated by the data provided.
