NOTES:

Distance Units:
Vertical Datum:

The results of surveys made on the dates indicated, as volumes are determined from more sounding information than shown. Features. Temporal changes may have occurred since this dataset was collected and should not be used for navigation. Orthoimagery is from a variety of sources and were located during survey operations, are provided for information only and as Government provided data. The recipient may not transfer these data to others without also transferring this Disclaimer.

DISCLAIMER

The US Army Corps of Engineers activity and indicates the general existing conditions. The sounding information depicted on this map represents the February 2020. The sounding information shown on this map was compiled from hydrographic surveys and is intended to portray general characteristics of the shoreline and other features. The MLLW to NAVD88 corrections for this dataset range from 1.2 to 1.6 feet. These corrections are referenced to NAVD88. The elevation of the mean higher high water reference point was determined as the mean of the highest high water recorded over the period of recording the data. If the data shown on this map are not intended for use in the design of new or existing structures or facilities, they should be used with caution and appropriate plumbing and structural integrity. Tides were recorded using RTK GPS. The MLLW to NAVD88 corrections for this project range from 1.2 to 2.0 feet. These corrections are referenced to NAVD88. The elevation of the mean higher high water reference point was determined as the mean of the highest high water recorded over the period of recording the data. If the data shown on this map are not intended for use in the design of new or existing structures or facilities, they should be used with caution and appropriate plumbing and structural integrity.
