

**GENERAL NOTES:**

1. Soundings are in feet and tenths and refer to the plane of Mean Lower Low Water (MLLW) 1983-2001 Tidal Epoch.
2. Topography shown is from previous surveys and/or NOAA Chart No. 13318. All topography, including shoreline, bridges, piers, etc., is located approximate unless otherwise noted and should be used as a general reference only.
3. Bench Mark Data: TBM Falls (2012) is a 1/4" drill hole in a granite block wall. The point is located at the Tidal Falls Preserve on the south side of Sullivan Falls. To reach from Ellsworth take Route 1 North into Hancock, turn right onto East Side Road, then left onto Tidal Falls Road and follow to the end. Elevation is 152.0 feet above MLLW.
4. Coordinates shown are based on the Transverse Mercator Grid System for the State of Maine (1801 Zone) & NAD 1983.
5. Survey was conducted using an Odom MK3 echotrac echosounder. Horizontal and vertical positioning was determined utilizing a Leica 1200 GPS system. An RTK base station was set on TBM Falls (2012).
6. The sounding information shown on these maps represents the SHOALEST soundings of those obtained from hydrographic surveys conducted during July 2012.
7. The sounding information depicted on these maps should NOT be used to determine volumes. Volumes are determined from more sounding information than shown. Additional sounding information is available upon request.
8. The information depicted on these maps represents the results of surveys made on the dates indicated, and can only be considered as indicating the general conditions existing at that time.
9. Field Book: R&H 4548  
Survey conducted by Robert MacGovern and crew.  
10-foot depth contour shown thus:  
Refer to survey #12-1218
