2015 ANNUAL OPERATION & MAINTENANCE (O&M)
AND MONITORING REPORT
AREA OF CONTAMINATION 50
FORMER FORT DEVENS ARMY INSTALLATION
DEVENS, MASSACHUSETTS

1.0 INTRODUCTION

This 2015 Annual Operation & Maintenance (O&M) and Monitoring Report was prepared by KOMAN Government Solutions, LLC (KGS) [formerly H&S Environmental, Inc. (H&S)] for the U.S. Army Corps of Engineers (USACE) under contract number W912WJ-15-C-0002, to detail the operation and performance of on-going remediation activities and groundwater monitoring results at Area of Contamination (AOC) 50 at the former Fort Devens Army Installation (Devens), Devens, Massachusetts (**Figure 1**). Remediation activities were performed in accordance with the *Final Long-Term Monitoring Plan* (LTMP) [HydroGeoLogic, Inc (HGL), 2012] and the *Final Work Plan for Supplemental ERD Injections at AOC 50* (H&S, 2015).

1.1 Purpose and Objectives

The purpose of this AOC 50 Annual O&M and Monitoring Report is to document the O&M activities conducted and to summarize the long-term monitoring (LTM) and groundwater analytical results from January through December 2015. All field work in 2015 was completed by KGS of Westborough, MA under contract W912WJ-15-C-0002.

In September 2004, ARCADIS U.S., Inc. /G&M, Inc. (ARCADIS) implemented the full-scale remedy after an enhanced reductive dechlorination (ERD) pilot study was conducted in Area 5. This included soil vapor extraction, ERD, and in-well stripping (IWS) systems. The first ERD injection event was conducted in October 2004 utilizing molasses as the ERD substrate. ARCADIS discontinued the soil vapor extraction (SVE) system in November 2005, as monitoring indicated that the recoverable chlorinated volatile organic compound (CVOC) mass was removed and the IWS was shut down in March 2013.

HGL revised the ERD injection program in November 2008 by revising the utilized substrate [molasses was replaced by Anaerobic BioChem® (ABC®)]. Semi-annual injections of ABC® continued in all areas through 2014. Based on historical data, a Membrane Interface Probe Hydraulic Profiling Tool (MiHPT) investigation was conducted in 2014 to address the findings from the calendar year (CY) 2013 profiling event in the Source Area (Area 1). Its purpose was to improve the overall understanding of the location/source of residual Volatile Organic Compound (VOC) contamination both vertically and laterally in the source area, where elevated [>1,000 micrograms per liter (µg/L)] concentrations of tetrachloroethene (PCE) remained and use that information to recommend modifications of the existing remedy to more effectively treat the source area. As a result of the MiHPT investigation, the spring 2015 injection strategy was planned.

The 2015 substrate injection strategy was developed based on review of the historical data and MiHPT results. The Spring 2015 injection event was performed in July and was the 14th ERD injection event using Anaerobic BioChem® (ABC®) as the ERD substrate. In addition, ABC

Ole and ABC Ole + were added to the 2015 event. ABC Ole includes oleic acids which are longer-chained compounds that area likely to persist longer in the source area soils, and therefore may improve the effectiveness of the injections. Similarly, zero valent iron (ZVI), referred to as Ole +, can enhance the rate of degradation in the tighter, more impacted source area soils. The ABC Ole was added to Areas 2 and 3 to evaluate the effectiveness of the longer-chained substrate to see if they persist longer (i.e., TOC remains elevated in the aquifer for longer). Areas 4 and 5 were treated with the ABC alone as in previous rounds to compare to the effectiveness of the Ole in the upgradient areas. The July 2015 strategy was outlined in the *Final Work Plan for Supplemental ERD Injections* (H&S, August 2015) and performed by Redox-Tech under KGS oversight. The strategy consisted of performing targeted direct push injections to reach deeper impacted soils in the source area as well as supplemental injections in select original injection wells located in Areas 1 through 5. Injections were performed in July 2015 at fifteen (15) Area 1 direct push injection locations, twelve (12) Area 1 injection wells, five (5) Area 2 injection wells, five (5) Area 3 injection wells, seven (7) Area 4 injection wells, and six (6) Area 5 injection wells.

A combination of ABC® and Oleic Acid (ABC® Ole') was used in Areas 1, 2 and 3 injection wells to increase persistence and prolong treatment of VOCs closer to the source area. Zero Valent Iron was added to ABC® Ole' (ABC® Ole'+) to enhance VOC reduction and stimulate long-term release of the components for bioremediation and create a more reductive environment. This combination was injected directly, via Geoprobe®, into deep soils in the source area (Area 1). ABC® alone was used in downgradient Areas 4 and 5, which was consistent with previous injection programs. One injection event occurred in 2015. The ERD injection program is evaluated after each event and modified as needed to address the effectiveness of the injection system.

1.2 Site Description and History

The AOC 50 site is located on the northeastern boundary of the former Moore Army Airfield (MAAF), within the former North Post portion of the former Fort Devens Army Installation, Ayer, Massachusetts (**Figure 1**). Fort Devens was identified for cessation of operations and closure under Public Law 101-510, the Defense Base Realignment and Closure (BRAC) Act of 1990, and was officially closed in March 1996. Portions of the property formerly occupied by Fort Devens were retained by the U.S. Army (Army) for reserve forces training and renamed the Devens Reserve Forces Training Area (DRFTA). Areas not retained as part of the DRFTA were transferred to new owners (Massachusetts Development and Finance Agency [MassDevelopment] and the U.S. Fish and Wildlife Service [USFWS]) for reuse and redevelopment. The DRFTA was renamed the U.S. Army Garrison Fort Devens in 2009.

All but approximately 14 acres of the former MAAF (approximately 246 acres total) were transferred to MassDevelopment for reuse in 1997. Currently, the airfield is closed to aircraft traffic and is used by the Massachusetts State Police for training and vehicle storage. The former MAAF is zoned for Special Use II and Innovation and Technology Business. Under the Devens Reuse Plan (November 14, 1994), Special Use II and Innovation and Technology Business includes a broad range of industrial, light industrial, office, and research and development uses. There are currently no plans for development of the former MAAF, although the area can be developed if interested parties are identified. Devens Army Installation retained approximately nine acres of the former airfield for vehicle storage and maintenance and approximately four acres in and around the AOC 50 Source Area for remediation activities.

The primary area of groundwater contamination at AOC 50 is referred to as the Southwest Plume, which extends from the Source Area approximately 3,000 feet (ft) downgradient towards the Nashua River. Sources of groundwater contamination at AOC 50 include two World War II fueling systems, a drywell formerly connected to the parachute shakeout tower, and the PCE drum storage area; these sources are collectively referred to as the, "AOC 50 Source Area". The AOC 50 Source Area is comprised of less than two acres and surrounds Buildings 3803 (the former parachute shop), 3840 (the former parachute shakeout tower), 3824 (a gazebo), and 3801 (the former 10th Special Forces airplane parachute simulation building). Although these sources have been removed or taken out of commission, groundwater underlying AOC 50 contains elevated concentrations of VOCs, most notably PCE.

1.3 Site Hydrogeology

A single groundwater aquifer occurs within the overburden deposits below the former MAAF and AOC 50. Restrictions to vertical groundwater flow, such as silty clay layers, are present, but are not prevalent or continuous in soil borings conducted within the kame glacial deposit or along the Nashua River. Some silty clay layers were encountered within the aquifer in the AOC 50 Source Area. These thin, silty clay layers appear to reduce the vertical permeability, contribute to a slight increase in the water table elevation, and increase the difference between shallow and deep water levels.

Depth to groundwater measurements have been collected from a network of monitoring wells and sampling points on a regular basis since 1997. Groundwater is encountered at approximately 3 ft below ground surface (bgs) in the AOC 50 Source Area and approximately 64 ft bgs at the southwestern end of the former MAAF. Groundwater elevations within deeper wells at and to the north of AOC 50 typically have lower heads than wells screened at shallower depths indicating that there is a downward hydraulic gradient within this area..

The Nashua River is the controlling hydrologic feature of AOC 50 and the former MAAF area. As groundwater beneath AOC 50 moves downgradient in a southwesterly direction toward the Nashua River, vertical gradients become neutral. Vertical gradients reverse and become upward along the Nashua River, as would be expected near such a discharge feature. These changes in gradient demonstrate that groundwater is recharged near the AOC 50 source area, travels below the former MAAF, and discharges to the Nashua River.

Hydraulic conductivities at the site range from one (1) to more than 50 ft per day (ft/day) with seepage velocities ranging from 0.024 to 1.19 ft/day.

1.4 Remedial System Operations and Modifications

The overall O&M approach and remedial system configuration at AOC 50 is constantly evaluated and adjusted in an effort to maintain optimum remedial performance. During the 2015 reporting period, the KGS team conducted the following routine activities and modifications.

The items listed below are discussed in more detail throughout this report.

- Collected semi-annual water level measurements across AOC 50 (spring and fall 2015).

- Conducted semi-annual LTM groundwater monitoring events in June 2015 (spring 2015) and October 2015 (fall 2015);
- Conducted post-ERD injection groundwater monitoring in September 2015; and
- Conduct groundwater sampling evaluation of HydraSleeve™ versus low flow sampling technology.

System modifications/updates performed during this reporting period include:

- Modified the ERD substrate injection strategy based on an evaluation of groundwater geochemistry and VOC trends observed in groundwater, and
- Performed ERD substrate injections in 35 injection wells (IWs) and at 15 Geoprobe direct push soil injection locations (GP) in July 2015.

2.0 REMEDIAL SYSTEM PERFORMANCE

2.1 Enhanced Reductive Dechlorination (ERD) System

The spring 2015 injection event occurred from July 21-30, 2015. Details of the ERD Injection event are presented in the *Enhanced Reductive Dechlorination Injection Summary Report* (H&S, 2016) included as **Appendix A**. Refer to this report for detailed information; including injection volumes, injection locations, types of substrate, results, statistical analysis and recommendations for future events. Injection locations are presented in **Figures 2.1** and **2.2**. Data trend charts are included as **Figures 3** through **17**. These charts represent PCE, TCE and/or methane concentrations over time for select wells within each Area.

<u>Area 1</u>

Figures 3 through **7** present the PCE, TCE and/or methane data trends for select locations in Area 1. Monitoring wells G6M-04-09X and G6M-04-10X are located downgradient of the FDSA. As shown in **Figures 3** and **4**, the trend shows a decline in PCE and TCE concentrations related to the ERD injections. PCE and TCE concentrations in these wells were non-detect or below detection limits in the samples collected in 2015. Monitoring wells G6M-02-08X and G6M-03-01X are located near the FDW. The PCE, TCE and/or methane data trends are depicted in **Figures 5** and **6**. Monitoring well G6M-02-08X (**Figure 5**) demonstrated high PCE concentrations with a high of 3,600 ug/l in 2003 but has steadily decreased since ERD injections began in 2004 and has been at or below detection limits since 2013. The continued decrease in PCE concentrations is attributed to the ERD injection program and is supported by low dissolved oxygen values, negative ORP and high methane concentrations at this location.

Location G6M-03-01X (**Figure 6**) showed a slight post-injection increase in PCE and TCE in 2015; however, the concentrations are lower than fall 2014 monitoring results. This increase in PCE and TCE concentrations is most likely attributed to injections of ERD substrate at nearby locations IW-13D, IW-15D and IW16D.

Monitoring well G6M-13-05X was installed in January 2014 to replace G6M-04-12X. The concentrations of PCE and TCE in groundwater sampled from monitoring well G6M-13-05X (**Figure 7**) have increased from since January 2014. This increase has been attributed to a delay response to historical ERD injections; however, the trend in 2015 data shows a decline.

<u>Area 2</u>

Figures 8 through **11** present the PCE, TCE and/or methane data trends for select locations in Area 2. Monitoring wells sampled in the vicinity of Area 2 in 2015 include G6M-02-01X, G6M-04-01X, G6M-04-03X and G6M-04-02X. Concentrations of PCE and TCE from location G6M-02-01X (**Figure 8**) have shown some fluctuations but have decreased overall since the ERD program started in 2004. The PCE and TCE concentrations have been at or below the detection limit since 2013 and were non-detect in 2015. Concentrations of PCE and TCE at upgradient location G6M-04-01X (**Figure 9**) have been below 5 µg/l since 2013 and were non-detect in 2015**.** PCE and TCE levels at location G6M-04-03X (**Figure 10**) showed an overall decrease since 2006 with some slight rebounds. Increased methane concentrations since 2009 and decreased PCE and TCE concentrations indicate reductive dechlorination is effectively reducing the contaminants of concern. Monitoring well G6M-04-02X is located directly upgradient of the Area 3 transect. Data trends for PCE and TCE (**Figure 11**) show some fluctuation during fall sampling events followed by a decrease after ERD injection events.

Area 3

Figures 12 and **13** present the PCE, TCE and/or methane data trends for downgradient Area 3 monitoring wells G6M-03-07X and G6M-04-04X. Concentrations of PCE and TCE in both wells have been non-detect since 2009. As indicated in Area 2, elevated methane concentrations in well G6M-03-07X, PCE concentrations near or below the limit of detection, low dissolved oxygen concentrations and negative ORP values indicate effective reductive dechlorination has occurred in Area 3. The geochemical environment of groundwater near Area 3 remains reductive and the remnant VOCs are expected to fully degrade.

Area 4

Figure 14 presents the PCE and TCE data trends for Area 4 monitoring wells G6M-06-01X and its replacement monitoring well G6M-13-02X. Well G6M-13-02X was installed in 2014 to replace G6M-06-01X, which was converted to an injection well on the westernmost edge of the Area 4 transect. Concentrations of PCE and TCE in monitoring well G6M-13-02X show a decreasing trend since October 2014 are expected to continue to decrease with continued ERD injections.

Area 5

Figures 15 through **17** present the PCE, TCE and/or methane data trends for Area 5 monitoring wells; G6M-97-05B, G6M-13-04X and G6M-03-10X. As shown in **Figure 15**, increasing trends for PCE and TCE have been observed in G6M-97-05B, which is located to the west of the Area 5 transect. Increasing trends are also evident in G6M-13-04X (**Figure 16**). Well G6M-13-04X was installed in 2014 to replace G6M-02-05X, which was converted to an injection well on the westernmost edge of the Area 5 transect. There was a slight increase in PCE and TCE concentrations in 2015 in well G6M-13-04X; however levels are well below historical high values and fluctuations may be due to ERD events. Dissolved oxygen and ORP values indicate a reducing environment and it is anticipated that PCE and TCE concentrations will continue to decrease. Concentrations of PCE have decreased over time at G6M-03-10X (**Figure 17**), however a recent sample collected on June 22, 2015 indicated a result of 15.5 ug/L. Concentrations collected after the injection event indicated non-detect for PCE.

2.2 Conclusions and Recommendations

The overall data trends overall indicate decreasing or stable PCE and TCE trends in all areas with the exception of G6M-97-05B located in Area 5. It is expected that concentrations in Areas 1 through 4 will continue to decrease with future ERD injections. However, the PCE and TCE concentrations at G6M-97-05B have increased to a high of 117 µg/L for PCE and 6.90 µg/L for TCE in October 2015. An evaluation of groundwater flow paths, groundwater concentrations and substrate injection points indicate that this well is located near the western edge of the treatment zone in Area 5. It is recommended that ERD injections continue upgradient of this location and be combined with direct injection of substrate within the vicinity of this well.

3.0 LONG-TERM MONITORING EVENT METHODOLOGY

The LTM program at AOC 50 was conducted in accordance with the Final Long Term Monitoring Plan (LTMP) (HGL, 2012) to monitor contaminant trends over time. The KGS team performed semi-annual LTM groundwater sampling events in spring (June) and fall (October) 2015. In addition, an post-ERD injection evaluation groundwater sampling event occurred in September 2015. Selected monitoring wells in the Area 1 - Source Area and in the downgradient Areas 2 through 5 were sampled to evaluate the effectiveness of the July 2015 ERD injection program.

3.1 Groundwater Sampling and Analysis

The spring and fall semi-annual LTM groundwater sampling events were conducted in June and October 2015. A post-injection sampling event occurred in September 2015. The groundwater sampling events were performed in accordance with the low-flow procedures documented in *Low Stress (low flow) Purging and Sampling Procedure for the Collection of Groundwater Samples from Monitoring Wells* (USEPA Region 1, 2010), and included the following activities:

- A combination of dedicated and non-dedicated, stainless steel bladder pumps was used for groundwater purging and sampling. The bladder pump intake screens were placed approximately in the center, or slightly below the center, of the submerged well screen interval. The pump intakes were placed a minimum of 2-ft above the bottom of the monitoring wells;
- Previously installed dedicated dual bonded, ¼-inch Teflon-lined polyethylene sample tubing was used in each LTM well;
- Each monitoring well was generally purged at a rate between 100 and 500 millimeters per minute. The purge rate was established to maintain a stable depth-to-water (DTW) and/or total draw down less than 0.3 ft (about 3.6 inches);
- The pump discharge was monitored for field parameters (pH, specific conductivity, DO, oxidation-reduction potential (ORP), temperature, and turbidity) and the DTW was measured every three to five minutes during purging. The purging of the monitoring well was determined to be complete when field parameters stabilized;
- Turbidity samples were collected via a “Y” or “T” connector with a shut-off valve located after the pump and before the flow-through cell;
- Dissolved metals samples were field-filtered with 0.45 micron filters; and,
- Investigation-derived waste (IDW) handling activities were similar to those described in **Section 3.3**.

Groundwater samples were collected from the monitoring wells for the analytical parameters discussed in Section 4.0 of this report. Details on analytical sample container and preservation requirements are included in **Table 3.1**. Groundwater sampling forms for all events are presented in **Appendix B**.

3.2 Decontamination Procedures

Bladder pumps that were used to sample more than one monitoring well were decontaminated between wells by using the following five-step process: 1) rinse with potable water, 2) wash with a non-phosphate detergent solution, 3) rinse with potable water, 4) rinse again with isopropyl alcohol, and 5) rinse with distilled water. The bladder pumps were completely disassembled prior to decontamination. The single use bladder was also removed from the bladder pump and replaced during the decontamination process. The same five-step process was used to decontaminate other non-dedicated sampling equipment.

3.3 Investigative-Derived Waste Handling

IDW (i.e., purge and decontamination water) was containerized at each wellhead and monitored using a photoionization detector (PID). During the sampling events, headspace monitoring of containerized IDW did not identify VOC vapors above background, (0 parts per million (ppm) to 10 ppm). Because VOC vapors were not above 10 ppm, the purge water was placed on the ground at the site of generation as outlined in the 2003, Waste Management Plan and May 1995, Project Operations Plan.

3.4 Long-term Monitoring Events

A summary of the methodology used during the 2015 sampling events is outlined below.

3.4.1 Monitoring Well Inspection

Prior to sampling, the following procedures were used by the KGS team to inspect the LTM wells at AOC 50:

- The monitoring well location was identified and the well identification number was confirmed;
- The wellhead was inspected for signs of damage and any damage noted, as warranted; and,
- The monitoring well seal was removed and the wellhead was screened with a PID. If ambient VOCs vapor concentrations at the breathing level exceeded five ppm, work activities at the wellhead were halted and the well was allowed to vent until vapor concentrations were below five ppm.

No tampering was apparent during any of the 2015 sampling events. AOC 50 monitoring well construction details are provided in **Table 3.2**.

3.4.2 Water Level Measurements

The depth to water in AOC 50 monitoring wells was measured and recorded within a 24-hour period as part of the spring and fall 2015 LTM events. The groundwater elevation at each monitoring well was determined by subtracting the DTW from the surveyed elevation of a reference point at the top of the well riser. A summary of the water level measurements and the corresponding water elevation data is presented in **Table 3.3** and groundwater elevation contours are presented on **Figures 18** (June 2015) and **19** (October 2015). The groundwater flow direction is to the southwest. Groundwater was encountered at 12.85 ft bgs (el. 211.97 ft amsl) and at 14.45 ft bgs (el. 210.37 ft. amsl) in the AOC 50 Source Area (G6M-04-10A) and at 55.82 ft bgs (el. 203.11 ft amsl) and 56.83 ft bgs (el. 202.10 ft amsl) in the southwestern end (G6M-04-05X) of the former MAAF during the spring and fall 2015 LTM events, respectively. The groundwater hydraulic gradient between G6M-04-10A and G6M-04-05X was calculated to be approximately 0.004 ft/ft in June 2015 and 0.0036 ft/ft in October 2015.

4.0 GROUNDWATER MONITORING RESULTS

The monitoring of AOC 50 groundwater is accomplished through measuring water levels to assess flow patterns, and sampling to evaluate groundwater quality. Table 4.1 in the Final LTMP (HGL, 2012) outlined the frequency and locations of the groundwater sampling and water level monitoring for CY 2015**.**

Laboratory analytical results for all groundwater samples collected during the 2015 LTM field activities are discussed in the following subsections. Analytical results judged to be artifacts or laboratory contaminants originating in the sampling and analytical processes are not considered representative of site conditions. The effects of contamination in the laboratory and field blanks, as well as the effects of other QC issues associated with the analytical results, are reported in data quality evaluation (DQE) reports for the 2015 sampling events. The DQEs are appended to this Annual Report as **Appendix C**.

4.1 Groundwater Chemistry for Monitoring Events

The spring 2015 LTM event included sampling of twenty (20) wells. The fall 2015 LTM event included sampling of forty-seven (47) locations (43 monitoring wells and 4 MicroWells®). In addition, eighteen (18) wells were sampled during September 2015 to evaluate the ERD optimization.

The frequency, sampling locations and analytical parameters for the LTM and ERD sampling events are summarized in **Table 4.1**. Selected analytical results and groundwater field parameters are presented in **Table 4.2.**

4.1.1 Field Parameters

Field parameter measurements collected during the spring and fall 2015 LTM semi-annual sampling events, as well as, the September 2015 post-ERD injection sampling event are summarized below.

Observed pH levels ranged from slightly acidic to slightly basic, 5.02 to 8.04, in 2015. Within AOC 50, especially in the Former Drum Storage Area (FDSA) and Former Dry Well (FDW) Area, the more acidic levels were present approximately within and directly downgradient of established in-situ reactive zone (IRZ) boundaries or, in the case of Area 5, upgradient of the former IWS system enclosure. Such pH differentiation is likely the result of higher carbonic and supplementary acid (e.g., fatty acids, propionic acid) formation from organic carbon fermentation, caused by the ERD process.

Low dissolved oxygen (DO) levels and negative ORP values were recorded directly downgradient and within the established IRZ boundaries. Low DO (less than 1 mg/L) and negative ORP values are indicators of the anaerobic breakdown of PCE. Specific conductivity data above 2.0 mS/cm were generally recorded for wells southwest of Route 2A and in the gravel parking lot for Area 1, which may be the result of the introduction of de-icing salt applied to roadways during snow removal activities.

In general, pH extremes at AOC 50 have been sporadic and primarily occurred from 2004 through 2006 when the IWS was initiated and molasses was the ERD substrate. Two monitoring wells that offer a moderate consistency for pH extremes are G6M-02-08X (FDW–Area 1) and G6M-04-03X (Area 2). Monitoring well G6M-02-08X (well screen located from 60 to 70 ft bgs) has exhibited pH readings between 3.97 and 5.59 since July 2005, and has a documented molasses content that stems from historic substrate injections. However, this well has demonstrated strong reductive dechlorination progress that has not been inhibited by a slightly low groundwater pH. Groundwater monitoring well G6M-04-03X, sampled annually, has yielded high pH values between 8.80 and 10.65 from 2008 through 2014. Measurements were lower in 2015 at 7.71 in September and 6.79 in October indicating that this ERD strategy is effective in Area 2.

4.1.2 Volatile Organic Compounds

Spring sampling included 20 groundwater monitoring wells and fall sampling included 46 monitoring wells. Post-injection sampling events included 18 wells in September. PCE degradation is demonstrated by increases in daughter compounds along the first order reductive dechlorination pathway of PCE → TCE → *cis*-1,2-DCE → VC, where the more chlorinated predecessor is subsequently replaced by a less chlorinated daughter product. As can be observed in Table 4-2, PCE concentrations have declined, biodegradation daughter products appeared and then disappeared, demonstrating the decline was due to ERD. Data trend charts for PCE, TCE and/or methane have been discussed in Section 2.0 and indicate overall decreasing PCE and TCE concentrations in all areas of AOC50. **Figures 20** through **23** present PCE concentration plume contours over time and will be discussed in this section.

Figure 20 shows a continuous PCE plume in 2004, extending from the source area to Area 5, with the highest detected PCE concentrations, up to 17,000 µg/L at location G6M-94-18X, in the source area. These data were collected prior to full scale remedy implementation.

Figure 21 shows PCE concentrations in 2010, after six years of remedial actions. The PCE plume decreased significantly over all areas in AOC 50 and was no longer continuous over the entire area. Residual pockets of PCE levels remained around injection transects in all areas. The highest levels continued to be concentrated in the Source area with PCE detected at 1,000 µg/L at location G6M-04-09X.

Figure 22 shows PCE concentrations in 2014. The PCE concentrations continue to be highest in the Source area, with a high of 6,200 µg/L at location G6M-07-02X. PCE levels have decreased across Areas 2 and 3. Area 5 showed increased levels along the westernmost edges on the perimeter of the Areas 4 and 5 transects.

Figure 23 shows PCE concentrations from the fall 2015 LTM sampling event. These samples were collected following an ERD injection in July 2015. The PCE concentrations continue to be highest in the Source area. PCE levels in Areas 2 and 3 have decreased from 2014 levels with the highest concentrations remaining in well G6M-04-02X. This well is located directly upgradient of the Area 3 transect; PCE concentrations decreased from 480 µg/L in 2014 to 105 µg/L in 2015. These results, along with low dissolved oxygen and negative ORP values, indicate that ERD injections in this area are effective. The PCE plume in Area 5 showed some decreases but has not changed significantly since 2014 and continues to persist along the westernmost edges. It should be noted that the increased levels of VOCs may be the resul of expanded monitoring in the area. PCE levels have increased in well G6M-97-05B; located directly to the west of the Area 5 transect. However, ORP and dissolved oxygen levels at this location are decreasing indicating that conditions are approaching anaerobic conditions.

4.1.3 Inorganic Metals

Groundwater samples were collected from 19 LTM wells during the spring 2015 LTM event and from 46 LTM wells during the fall 2015 LTM event. All samples were submitted for dissolved metals (arsenic, iron and manganese) analysis. Groundwater samples were also collected from 18 wells and submitted for dissolved metals analysis during the September post-injection sampling event. **Table 4.2** presents the metals data to date. **Figures 24 and 25** presents dissolved arsenic concentrations and ORP data, graphically, for Area 5 wells.

Metals solubilization, especially arsenic and manganese associated with the ERD process, is evident within the in-situ reactive zones (IRZs) across AOC 50. The resulting extent of metals desorption is directly correlated with the geochemically reducing conditions within the IRZ for each injection area. Specifically, the more reductive the environment and, thus, conducive to chlorinated hydrocarbon degradation, the more likely metals dissolution will occur within a reducing zone. This relationship is observed throughout the AOC 50 treatment area and was an anticipated by-product of the selected remedy. Solubilization of naturally-occurring metals is isolated to the area constituting the IRZs due to the production of arsenic (III) (arsenite) versus arsenic (V) (arsenate).

Monitoring wells with the highest historic levels of arsenic are located in Area 5. The dissolved metals concentrations will likely continue to fluctuate within an IRZ and are not anticipated to significantly diminish until the IRZ reverts to an oxidizing state. By comparison, oxygenated environments with a positive ORP promote the oxygenation of arsenite to arsenate, which is readily and firmly bound within the surrounding mineral and natural organic matrices. The presence of dissolved iron within the aquifer further promotes rapid oxidation of the arsenite to arsenate once the groundwater reaches the oxidizing portions of the aquifer.

4.1.4 Conclusions

As noted in Section 2.2 and discussed in Section 4.1.2, the historic PCE concentrations in groundwater are reducing throughout the ERD injection areas. In most cases, the degradation of PCE is followed by an increase in biodegradation daughter products. Through ERD, the daughter product concentrations have declined. As shown in Figures 4.3 and 4.4, residual pockets of PCE in groundwater remain along the western edge of Areas 4 and 5. The PCE concentrations in the Area 5 downgradient MicroWell® locations, XSA-12-97X, XSA-12-96X, XSA-12-98X, and XSA-12-95X, are above the 5 µg/L action level.

As is evident from the monitoring data, dissolved arsenic concentrations are generally below the regulatory limit of 10 µg/L, within wells where conditions are primarily oxidizing. This includes wells downgradient of the defined Area 5 IRZ. Groundwater monitoring performed at the Area 5 downgradient MicroWell® locations, XSA-12-97X, XSA-12-96X, XSA-12-98X, and XSA-12-95X, confirms that the level of dissolved arsenic, above the regulatory limit of 10 µg/L, does not extend beyond the area of monitoring well G6M-03-10X and has not bypassed the AOC 50 monitoring well network.

Concentrations of total organic carbon (TOC) were monitored in the ERD injection areas to indicate substrate distribution. This parameter is an indicator of natural organic carbon present at site during baseline characterization and is an indicator of substrate distribution during performance monitoring. An ideal range of TOC is 20 to 50 mg/L. It was anticipated that TOC concentrations should have increased after the ABC Ole and ABC Ole+ injections. Concentrations of TOC that are stable or declining in conjunction with elevated or increasing VOC concentrations indicate additional substrate injection is necessary. As can be observed in Area 1/Source Area wells, TOC concentrations are less than 5 mg/L in monitoring locations G6M-07-02X and G6M-03-01X, while PCE and TCE concentrations are above the cleanup criteria. Area 2 wells indicate a steady decline in TCE and PCE concentrations and an increase in TOC concentrations.

Area 3 wells indicate TOC concentrations less than 5 mg/L and VOC concentrations above the cleanup criteria. This is observed at well G6M-04-02X. Concentrations of PCE increased from 16.2 to 105 µg/L and TOC was less than 5 mg/L. The increase in PCE concentration may be related to changes in pH. The release of hydrochloric acid, volatile fatty acids and carbonic acid during the ERD process may contribute to reduced dechlorination efficiency and subsequent rebound. Area 4 and 5 monitoring locations indicated overall decreases in VOC concentrations with exceptions at G6M-04-07X, G6M-13-01X and G6M-97-05B. These increases may be attributed to decreases in pH, affecting the ERD process. Additional monitoring will be necessary to evaluate VOC degradation.

Methane concentrations were reviewed in the injection areas. The presence of methane indicates fermentation is occurring in a highly anaerobic environment and that reducing conditions are appropriate for anaerobic degradation. For chlorinated aliphatic hydrocarbons, such as PCE, elevated levels of ethene and ethane can be used to infer anaerobic dechlorination. However, these two compounds are subject to rapid biodegradation so their absence in a sample does not necessarily mean that biodegradation is not occurring. A review of methane, ethane and ethene concentrations after the substrate modification indicated slight increases at select wells. The increases of methane were coupled with decreases in VOC concentrations. Ethene and ethane concentrations remained relatively stable.

Exceptions included G6M-04-076X and G6M-97-05B which indicated a decrease in methane or not detected concentrations and a slight increase in PCE. However as discussed previously, fluctuations in pH may be affecting the ERD process.

Overall, the addition of ABC substrate has reduced the VOC concentrations at AOC 50. The modification to the ABC substrate including the addition of olelic acids (ABC Ole) and zero valent iron (ABC Ole +) produced results consistent with previous injections. However, the product persistence appears to be successful when comparing previous injection events with the 2015 event. This is observed through continued negative ORP values, stable TOC and stable methane concentrations.

The Army will continue to monitor VOC and metals concentrations as well as geochemistry parameters across the site and will evaluate potential changes to the ERD substrate injection strategy.

4.2 Quality Assurance/Quality Control

All analytical data were provided by a properly accredited laboratory. Accutest-New England is certified by the Commonwealth of Massachusetts in the analysis of potable and non-potable water. Accutest is also accredited by the National Environmental Laboratory Accreditation Program (NELAP) and compliant with the Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories.

As part of the 2015 groundwater sampling events, QA/QC samples were collected to ensure that the data quality objectives were met for the laboratory analysis. Field QC activities included equipment (rinsate) blank collection from a non-dedicated groundwater sampling pump after the equipment was decontaminated. Equipment blank samples were analyzed for the same parameters as the associated groundwater samples. In addition, field duplicate samples were collected at a rate of 10% to evaluate field precision, and matrix spike (MS)/MS duplicate (MSD) pairs were submitted at 5% to evaluate matrix effects on analytical precision and accuracy.

The KGS team evaluated analytical results from the 2015 sampling events for data acceptability in accordance with the USEPA Region 1 data validation guidelines (USEPA Region 1, 1996a, 1996b, 2004, and 2008), using the acceptance limits defined in the AOC 50 Project-*Specific Quality Assurance Project Plan (QAPP) for the Annual Long-Term Monitoring (LTM) Program* [QAPP]; Sovereign and HGL, 2013). The method requirements from the USEPA SW-846 QC guidance (USEPA, 2005) and the DoD QSM version 5.0 (DoD, 2013) were used as supplemental information. The DQEs for the AOC 50 2015 sampling events are presented in **Appendix C**. Specific laboratory QC deviations requiring qualification in the spring and fall 2015 data sets included:

- Field duplicate precision above of the acceptable range;
- Method, trip and/or equipment blank cross-contamination; and,
- MS and MSD recovery and precision results outside the acceptance criteria.

Appropriate qualifiers have been added to the analytical data in **Table 4.2**.

4.3 Laboratory and Field Corrective actions

Laboratory

All laboratory analyses were performed in accordance with the precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS) requirements listed in the AOC 50 QAPP (Sovereign and HGL, 2013). The detection limits for vinyl chloride in samples collected from location G6M-02-08X in June, September and October 2015 were elevated due to sample matrix effects which required dilutions prior to analysis. No corrective actions were required by the laboratory for the 2015 sampling events.

Field

There were no major field corrective actions required in CY 2015. Discrepancy issues were identified real time by review of chains of custody and laboratory logins as they were received by the project chemist. If discrepancies were noted, the project chemist notified the laboratory project manager via email and/or verbal communication and the issue was resolved immediately.

5.0 HYDRASLEEVE SAMPLING

During the spring and fall 2015 sampling events, HydraSleeve™ technology was utilized along with low stress/low flow sampling methods to evaluate the potential for substituting low flow sampling techniques with HydraSleeve™ technology. Confirmatory sampling was conducted involving the collection of analytical samples by both means and comparison of the results using relative percent difference (RPD) calculations. HydraSleeve™ is a proven, no-purge groundwater sampling method that reduces sampling time and equipment needs. Previous studies have indicated that HydraSleeve™ sampling is a suitable substitute for low-flow sampling (Parsons, 2005; Fernandes and Roberts, 2001; MWH, 2009; MWH, 2010; NDCEE, 2012).

HydraSleeve™ samplers were used during the spring LTM sampling event. At each sample location, the HydraSleeve™ was installed after water level measurements were collected. HydraSleeve™ samplers were installed according to manufacturer's specifications and instructions. Each well was allowed to equilibrate prior to the HydraSleeve™ being removed. However, due to field technician sample collection error, the samples were not collected per manufacturer's instruction. This resulted in significant RPD differences between low flow and HydraSleeve™ sample results and this data was not considered for evaluation.

Fall sampling included HydraSleeve™ technology. During these events, sample technique was reviewed with the field staff resulting in comparable data sets. **Table 5.1** shows the comparison of HydraSleeve™ and low flow sample results for VOC analysis of samples collected from AOC 50 in October 2015.

RPDs for detected results ranged from 3.4% to 103%. The results for PCE, TCE and VC from four out of the five samples were fairly comparable, with the exception of RPDs of 66.6% and 62.6% for the cis-1,2-dichloroethene results. The RPDs for PCE and TCE from one sample were 90.1% and 103%, respectively. There does not appear to be a trend. However, a possible explanation for these discrepancies might be loss of VOCs during sampling as a result of using the two sampling techniques.

The ideal RPD would be less than 20% indicating that the HydraSleeve™ technology would be a suitable alternate procedure for sampling groundwater wells. However due to the variations in RPDs presented in Table 5.1, additional data will be collected in spring 2016 to further evaluate the usability of HydraSleeve™ samplers for groundwater sampling

6.0 LAND-USE CONTROL MONITORING

Land Use Controls (LUCs) were a key component of the 2004 Record of Decision (ROD) and 2005 Final Remedial Action Work Plan (RAWP) (ARCADIS, 2005) and were developed to restrict or prevent potential human exposure to groundwater contaminants of AOC 50 until the property can be used for unlimited exposure and unrestricted use. The 2005 RAWP outlined the plan for implementation of the LUCs at AOC 50. According to the plan, LUCs are implemented in each area of the plume, the North, Source Area and Southwest. LUCs in the form of institutional controls (ICs) are necessary to restrict land and groundwater use at the site to prevent unacceptable risk for the duration of the remedy.

The LUC RAWP established the LUC objectives for each area. The basic objectives for all areas include: Restricting potential residential and/or commercial/industrial receptors from ingesting contaminated groundwater; restricting groundwater pumping and/or stormwater discharge/recharge to avoid drawing the contaminated groundwater from the Source Area; limiting construction in specified areas over the contaminated groundwater that would interfere with the operation of the remedy and providing access to the site for the monitoring/remediation. Additional objectives in the Source Area include: protecting commercial/industrial workers from inhaling vapors released from groundwater used as "open" process water and preventing potential construction/occupation of residential dwellings, schools/child care facilities and inhalation of vapors released from groundwater to indoor air.

The objectives of the LUCs for AOC 50 are imposed through legal mechanisms, which have been set up to establish environmental use restrictions and controls to limit activities that would interfere with the operation of the remedy. The legal mechanisms are enforced through incorporation of lease provisions into deeds and permits and through negotiations and agreements with local towns and developers.

Annual physical inspections, including interviews with stakeholders, are conducted to confirm continued compliance with LUC objectives. Annual LUC compliance reports are prepared and include a summary of the interviews and inspections and identify any deficiencies to the site controls. The annual evaluation addresses whether the use restrictions and controls were communicated in the deed(s), whether the owners and state and local agencies were notified of the use restrictions and controls affecting the property, and whether use of the property has conformed to such restrictions and controls. The AOC 50 annual LUC inspection and interview is included in Appendix E.

The September 2007 Addendum to the Real Property Master Plan included supplemental information on LUCs established under BRAC and Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) programs that are applicable to Area G (Regional Training Site [RTS] Maintenance), as well as, for three other deeded areas located at the DRFTA. A copy of the September 2007 Addendum to the Real Property Master Plan is presented as **Appendix E**.

Any proposed actions that affect the AOC 50 property must consider following the ROD requirements, which include:

- Provide continued access to treatment transects and monitoring wells and access to install additional injection or monitoring wells, if necessary;

- Coordinate construction plans with the BCT to facilitate ongoing remediation and future access to plume areas;
- No groundwater extraction or injection for any purpose; and,
- Coordinate construction plans for modifications to storm water systems with the BCT.

Furthermore, the deed notices provided at the time of property transfer to USFWS, Henry Woodle of Groton Ayer Realty Trust, and Ron Ostrowski of MassDevelopment, inform each owner of their property use restrictions.

Monitoring activities performed for the 2015 reporting period included a review of the documentation and records, on-site inspections, and annual LUC interviews with AOC 50 property owners.

6.1 On-site Inspections

LUCs were verified during an annual physical inspection of the site. The physical inspection included the following observations:

- Any signs of increased exposure potential to the public from groundwater contaminants;
- Any evidence that groundwater extraction wells had been installed at the site;
- Any evidence of site use changes; and,
- Any site access issues related to monitoring and remediation activities.

No evidence of increased exposure potential or the installation of groundwater extraction wells was observed. There is no evidence of any new activity in the area. There were no issues encountered related to site access for monitoring and remediation activities during the October 2015 site inspection.

6.2 Land-Use Control Interview

Telephone interviews were conducted with each property owner, manager or other designee familiar with "day-to-day" activities of the property. During the interviews, the KGS team personnel inquired about the following:

- The owner's familiarity regarding LUCs imposed upon the property and documentation of these controls;
- Sources of water used at the property; and,
- Proposed plans for property sale, future development, construction or demolition activities at AOC 50.

Mr. Simeone of USACE stated that no change has occurred during CY 2015 and that the remedy is being implemented at the site.

Mr. Ostrowski of MassDevelopment, reiterated the same information stating that no change had occurred during CY 2015.

6.3 Land-Use Control Monitoring Summary

Results of the annual compliance monitoring indicate that no breaches to the LUCs were evident and corrective action(s) were not necessary since there were no changes in site conditions or land use. There are no proposed changes to inspection and reporting frequency at this time.

7.0 CONCLUSIONS

Sections 2.0 and 4.0 discuss the 2015 ERD injection and LTM events, respectively. Overall, the target VOC concentrations groundwater in all areas of AOC 50 are decreasing as shown on trends charts (Appendix A of the *ERD Injection Report*) and plume figures (Figures 4.1 through 4.4) indicating that remedial actions are effectively treating contaminants of concern to achieve site goals. Increased methane concentrations and low dissolved oxygen and negative ORP levels support this conclusion.

The highest levels of PCE, while greatly reduced over time, remain in the source areas wells. Areas 2 and 3 show the most definitive overall decreasing concentration trend for PCE. This indicates that the ERD process is continuing to work toward completion in these areas, as is confirmed by a decline in dechlorination by-product levels and the sustained evolution of high ethene and methane concentrations. Some residual pockets of PCE still exist at select monitoring wells, specifically downgradient and along the western edge of Areas 4 and 5. Recent data have shown that the conversion of western edge monitoring wells in Areas 1, 2, 4 and 5 to injection wells has been effective at stimulating reductive dechlorination at the western edge of the former PCE plume.

KGS

8.0 RECOMMENDATIONS

After evaluation of the results and interpretation of the analytical and geochemical data collected during the 2015 reporting period discussed in this annual report; the following actions are recommended for AOC 50 in 2016:

- Based on continued detections of PCE in Source Area wells, additional Geoprobe direct push injections of ABC®Ole'+ substrate are recommended. In addition, injections will be conducted in existing Source Area injection wells with ABC®Ole'. Data from the groundwater sampling events will be used to continue evaluating the effectiveness of the ERD remedy.
- Reducing conditions are present in Area 2; therefore, additional supplemental ERD injections are not recommended at this time. Groundwater conditions will continue to be monitored during LTM sampling events.
- ERD injections of ABC®Ole' substrate will be conducted in select Area 3 injection wells. Potential injection wells may include IW-26 and IW-27.
- Based on PCE levels along the western edge of Areas 4 and 5, continued injections of ABC® will be conducted in select injection wells and direct push locations along the Areas 4 and 5 transects. Potential injection wells may include G6M-06-01X and IW-36.

Prior to each ERD injection event, the ERD injection strategy will be evaluated to optimize the volume and/or the placement of the ERD substrate within particular injection transects. Groundwater sampling will be conducted during the spring 2016 LTM event to evaluate groundwater conditions prior to the injection event. A post-injection sampling event will occur after the fall 2016 LTM event to assess the effectiveness of the 2016 ERD injection strategy. Semi-annual and annual LTM sampling and collection of synoptic water levels will continue in the spring and fall. Annual monitoring for VOCs and metals will continue at MicroWells® XSA-12-95X through XSA-12-98X.

Notes:
TOC: Top of Casing. BGS: Below Ground Surface. PID: Photoionization Detector (measurement of volatiles). FID: Flame Ionization Detector (measurement of methane). PPM: Parts Per Million.
NM: Not Measured.

TABLE 3.1
Sample Preparation and Analysis Methods, Containers,
Holding Times, and Preservatives
LTM AOC 50
Former Fort Devens Army Installation
Devens, MA

Parameter	Analytical Method	Contaminant of Concern	Sample Container	Preservative
ORGANIC				
VOCs	SW8260C	TAL	3 x 40-ml vials with teflon septa screw caps; no	HCl to pH < 2; 4°+/- 2°C
Dissolved Gases	RSK-175	MEE	2 x 40-mL VOA vials	HCl to pH < 2; 4°+/- 2°C
METALS				
Dissolved Metals (field filtered)	SW6010C/6020A	As, Fe, Mn	1 x 250-ml Polyethylene	HNO3 to pH < 2; 4°+/- 2°C
WET CHEM				
Alkalinity	SM2320B	None	1 x 250-ml Polyethylene	Store at 4°+/-2°C
Nitrate	E353.2	Nitrate/Nitrite(As N)	1 x 500-ml Polyethylene	H2SO4 to pH < 2; 4°+/- 2°C
Sulfate	SW9056A	Sulfate	1 x 500-ml Polyethylene	Store at 4°+/-2°C
Sulfide	SM4500D-S-	Sulfide	1 x 250-ml Polyethylene	Zinc acetate +NaOH to pH >9, 4 °C
Total Organic Carbon	SM5310B	TOC	2 x 40-mL VOA vials or 250-ml amber glass bottle	H2SO4 to pH <2, 4 °C

Notes:
TAL = Target Analyte List
MEE = Methane, ethane and ethene
TOC: Total Organic Carbon

Monitoring Wells Selected for Long-Term Monitoring
Former Fort Devens Army Installation
Devens, MA

Location	Well ID	Sampling Rationale	Well Screen Interval (ft bgs)	Well Screen Elevation (ft, amsl)	Sample Parameters	Sample Frequency
North Plume	G6M-96-22A	Monitor VOCs and Arsenic in groundwater in the North Plume.	40-50	176.3-166.3	VOCs and Metals	Annual
	G6M-96-22B		65.5-70.5	150.9-145.9	VOCs and Metals	
Area 1	G6M-04-10A	Monitor COCs downgradient of ERD Injection Wells in the Source Area and provide pre-injection COC and Geochemistry data for ERD injection planning.	30-40	193.02-183.02	Full Suite	Semi-annual
	G6M-04-09X		55-65	188.46-178.46	VOCs, Metals and	
	G6M-13-06X		60-60	172.67-162.67	Full Suite	
	G6M-02-08X		60-70	163.2-153.2	Full Suite	
	G6M-93-13X		9-19	218.2-208.2		
	G6M-13-05X		45-55	178.3-168.3	VOCs and Metals	
Area 1	G6M-07-02X	Monitor COC trends within the Source Area.	22.5-27.5	225.83	Full Suite	Annual
	G6M-04-10X		52-62	170.92-160.92	Full Suite	
	G6M-04-13X		30-40	194.71-184.71	VOCs and Metals	
	G6M-04-15X		70-80	182.45-172.45	VOCs and Metals	
	G6M-03-02X		28-43	173.2-158.2	Full Suite	
	G6M-95-19X		48-58	174.8-164.8	VOCs and Metals	
	G6M-95-20X		18-23	205.0-200	VOCs and Metals	
Area 1	G6M-04-11X	Monitor COC trends and provide plume delineation downgradient of the Cesspool and Dry Well areas.	35-45	193.42-183.42	VOCs	Biennial
	G6M-04-31X[1]		68-78	186.83-176.83	As only/Fall	
	G6M-04-22X[1]		74-84	180.75-170.75	As only/Fall	
Area 1	G6M-03-01X	Monitor COCs downgradient of ERD Injection Wells in the Source Area.	50-70	173.3-153.3	VOCs	Semi-annual
Area 2	G6M-02-01X	Monitor TOC and COCs downgradient of ERD Injection Wells in the Southwest Plume Provide pre-injection COC and Geochemistry data for ERD injection planning.	80-95	183.8-168.8	Full Suite	Semi-annual
Area 2	G6M-04-01X	Monitor COCs upgradient of ERD Injection Wells in the Southwest Plume.	82-92	180.49-170.49	VOCs and Metals	Annual
Area 2	G6M-04-03X	Monitor COCs downgradient of ERD Injection Wells in the Southwest Plume.	85-95	180.61-170.61	Full Suite	Annual
Area 3	G6M-03-07X	Monitor TOC and COCs downgradient of ERD Injection Wells in the Southwest Plume Provide pre-injection COC and Geochemistry data for ERD injection.	80-90	183.6-173.6	Full Suite	Semi-Annual
Area 3	G6M-04-02X	Monitor COCs upgradient of ERD Injection Wells in the Southwest Plume.	80-90	184.49-174.98	VOCs and Metals	Annual
	G6M-13-03X		80-90	185-17-175.17	VOCs and Metals	
Area 3	G6M-04-04X	Monitor COCs downgradient of ERD Injection Wells in the Southwest Plume.	94-104	159.67-169.67	Full Suite	
Area 4	G6M-13-02X	Monitor VOCs on perimeter of Southwest Plume. Provide pre-injection COC and Geochemistry data for ERD injection planning.	115-125	149.62-139.62	VOCs and Metals	Semi-Annual
Area 4	G6M-02-13X	Monitor TOC and COCs downgradient of ERD Injection Wells in the Southwest Plume.	110-120	154.8-144.8	Full Suite	Annual
Area 4	G6M-02-04X	Monitor COCs upgradient of ERD Injection Wells in the Southwest Plume.	90-105	173.6-158.6	VOCs and Metals	
	G6M-02-03X		90-105	174.4-159.4		
	G6M-97-28X		100-105	163.9-158.9		
Area 5	MW-3	Monitor TOC and COCs downgradient and adjacent to ERD Injection Wells in the Southwest	126-136	138.7-128.7	Full Suite	Semi-annual
	G6M-13-04X		125-135	139.61-129.61	Full Suite	
Area 5	G6M-02-12X	Monitor COCs downgradient of the ERD Injection Wellswithin the Area 5 IRZ.	125-135	138.4-128.4	Full Suite	Annual
	G6M-02-11X		125-135	140-130	Full Suite	
	G6M-03-10X		120-135	144.2-129.2	Full Suite	
Area 5	G6M-03-08X	Monitor COCs and metals downgradient of last	125-140	132.2-117.2	Full Suite	

TABLE 4.1
AOC 50
Monitoring Wells Selected for Long-Term Monitoring
Former Fort Devens Army Installation
Devens, MA

Location	Well ID	Sampling Rationale	Well Screen Interval (ft bgs)	Well Screen Elevation (ft, amsl)	Sample Parameters	Sample Frequency
(Sentry)	G6M-03-09X	ERD transect of Injection Wells outside of Area 5	125-140	132.4-117.4	Full Suite	
Area 5 (IWS)	G6M-04-05X	Monitor COCs and metals upgradient of the IWS system and downgradient of the ERD injection transects.	100-110	157.33-147.33	Full Suite	Annual
	G6M-04-07X		120-130	142.68-132.68	Full Suite	
	G6M-04-06X		95-105	168.07-158.07	Full Suite	
Area 5	MW-7	Monitor COCs upgradient of ERD Injection Wells in the Southwest Plume	125-135	139.7-129.7	VOCs and Metals	Annual
Area 5	G6M-02-06X	Monitor VOCs along bank of Nashua River	55-65	153.5-143.5	VOCs and Metals	Annual
	G6M-02-07X		30-40	179.5-169.5	VOCs and Metals	
Nashua River	G6M-04-14X	Monitor VOCs and Metals on the south bank of the Nashua River.	80-90	131.56-121.56	VOCs and Metals	Annual
Area 5[2]	XSA-12-95X	Monitor Geochemistry and metals crossgradient and downgradient of ERD injection wells at Area 5.	120-130	147.43-137.43	VOCs and Metals	Annual
	XSA-12-96X		120-130	147.82-137.82	VOCs and Metals	
	XSA-12-97X		119.75-129.75	148.96-138.96	VOCs and Metals	
	XSA-12-98X		60-70	147.44-137.44	VOCs and Metals	
	G6M-97-05B		130-135	147.44-137.44	VOCs and Metals	
	G6M-13-01X		125-135	140.15-130.15	VOCs and Metals	

Notes:

Metals - dissolved arsenic, iron, and manganese.

Full Suite- VOCs, metals, nitrate, sulfate/sulfide, alkalinity (fall only), methane, ethane, ethene, and total organic carbon.

Field parameters to be measured include: pH, dissolved oxygen, oxidation/reduction potential, specific conductivity, turbidty, and temperature.

[1] Annual fall LTM sampling of G6M-04-31X and G6M-04-22X for arsenic will be conducted when biennial laboratory samples are not collected.

[2] MicroWells® XSA-12-95X through XSA-12-98X installed in Spring 2012.

Pre and Post samples collected to monitor ERD injections (Full Suite).

Wells to be sampled to monitor ERD injections (not included in LTM)

Table 4-2
Groundwater Analytical Results
Area of Contamination 50

1.0 INTRODUCTION

The AOC 50 Site is located on the northeastern boundary of the former Moore Army Airfield (MAAF), within the former North Post portion of the former Fort Devens Army Installation, Devens, Massachusetts (**Figure 1**). Area 1 (Source Area) and downgradient areas (Areas 2 through 5) are shown on **Figure 2**. Information on the background of the AOC 50 Site is included in Long Term Monitoring Plan (LTMP) (HGL 2012). The following summary provides information on the recently completed Enhanced Reductive Dechlorination (ERD) injections at area of contamination (AOC) 50 monitored by H & S Environmental, Inc., (H & S) and implemented by Redox-Tech.

Event: Spring 2015 (ERD) Injections
Location: AOC 50, Moore Army Airfield
Date: July 21-30, 2015
Contractors: H&S Environmental, Inc. (H&S) and Redox Tech, LLC (Redox).
Personnel: John Fitzgerald, H&S Environmental, Inc.
Sean Enos, H&S Environmental, Inc.
Elizabeth Anderson, H&S Environmental, Inc.
Mike Pedany, Redox-Tech
Keith Precious, Redox-Tech

Products:

This was the 14th ERD injection event using Anaerobic BioChem® (ABC®) as the ERD substrate. A combination of ABC® and Oleic Acid (ABC® Ole') was used in Areas 2 and 3 to increase persistence and prolong treatment of VOCs closer to the source area. Zero Valent Iron (ZVI) was added to ABC® Ole' (ABC® Ole'+) to enhance VOC reduction and stimulate long-term release of the components for bioremediation and create a more reductive environment. This combination was injected directly to deep soils in the source area. ABC® alone was used in downgradient Areas 4 and 5, which was consistent with previous injection programs.

Equipment Used:

Redox-Tech Equipment On Site:

1. One support truck.
2. Trailer (equipment within trailer included poly tank used for mixing/storage of ABC®-Ole'-water mix, one air diaphragm pump, and miscellaneous hoses).
3. Additional poly tanks for mixing/storage of ABC®-Ole'-water mix.
4. Grout pump for mixing ZVI with ABC®-Ole' and injecting with the Geoprobe.
5. Diesel air compressor (rental).
6. ABC®-Ole' totes.
7. Geoprobe®
8. Hydraulic fork lift

H & S Equipment On Site:

1. Flame ionization detector (FID) with carbon tip.
2. Photo ionization detector (PID).
3. Water level indicator.
4. Disposable bailers.

2.0 COMPLETED INJECTION PROGRAM

An injection log provided in **Table 1** identifies each injection location (Geoprobe point or injection well), quantity and type of injected product, and grout pump/wellhead pressures, as well as measured field parameters (depth to water, methane, VOCs). Changes in water level elevations were generally minor. Prior to injection, wells previously identified as slow acceptors of the injection media were surged with a clean disposable bailer. These included wells IW-7, IW-8, IW-11, IW-19S, IW-25, IW-27, IW-28 and IW-35. Surging the wells did not yield any significant changes with injection rates when compared to historical events.

Based on the historical data, June 2015 sampling data (**Figure 4**) and Membrane Interface Probe Hydraulic Profiling Tool (MiHPT) results, the spring 2015injection strategy was planned. The strategy consisted of performing direct push injections to reach deeper impacted soils in the source area as well as supplemental injections at five of the original injection areas. Injections were performed in July 2015 at fifteen (15) Area 1 direct push injection locations, twelve (12) Area 1 injection wells, five (5) Area 2 injection wells, five (5) Area 3 injection wells, seven (7) Area 4 injection wells, and six (6) Area 5 injection wells.

The injection event occurred from July 21-30, 2015. **Table 2** lists pre and post injection event groundwater samples and monitoring data.

2.1 Area 1 (Source Area) Program

The Area 1 injection program included direct injection locations identified during the MiHPT study conducted in 2015. The identified deeper soil impacts were targeted by directly injecting ABC®-Ole'+ through 1.5 inch diameter grouting rods. **Figure 3** shows the injections locations. A concentration of 18% wt. solution of ABC®-Ole'+ was directly injected using a Geoprobe® starting at approximately 64 feet below ground surface (bgs). Approximately 130 gallons of ABC®-Ole'+ solution was injected at 4 ft. intervals from 64 ft. to approximately 40 ft. bgs, for an approximate total of 910 gallons per location. In addition, an injection from 40 to 16 ft bgs of ABC®-Ole'+ was conducted at location GP-14 located upgraded of a relatively shallow area of impact identified during the MiHPT program.

The volume of ERD solution injected at existing Area 1 injection wells was approximately 260 gallons of a ABC®-Ole' mixture at 20% wt. solution. The ZVI was not used in wells due to potential of clogging the well screens. Shallow supplemental injections occurred at IW-7, IW-8, IW-11, and IW-12 located upgradient to the highest areas of impact identified at G6-078-02X. Locations IW-18S and IW-19S are upgradient of a shallow contamination identified in the MiHPT study and subsequently received supplementary injection. The following volumes were injected at Area 1:

- GP-1, GP-2, GP-3, GP-4, GP-5, GP-6, GP-7, GP-8, GP-9, GP-10, GP-11, GP-12, GP-13, GP-14, and GP-15 each received 910 gallons of ABC®-Ole'+/water solution
- IW-7, IW-8, IW-11, IW-12, IW-13D, IW-15D, IW-16D, IW-17D, IW-18D, IW-18S, IW-19D, and IW-19S each received 260 gallons of ABC®-Ole'/water solution.

2.2 Downgradient Areas 2 and 3 Supplemental Injections

Area 2 wells showed fluctuations in tetrachloroethylene (PCE) between 2012 and 2014. Area 2 wells did not receive ERD injections in Fall 2014, five wells received injections of 410 gallons ABC®-Ole' solution in Spring 2015. Groundwater sample data from Fall 2014, pre-injection 2015, and post-injection 2015 can be found in **Table 2**.

Area 3 injections were conducted to address fluctuations in PCE upgradient of the injection transect. Upgradient monitoring well G6M-04-02X was observed to have an increase in PCE from October 2013 (140 µg/L) to October 2014 (480 µg/L), but decreased to 62.2 µg/L in June 2015. The Spring 2015 injections were conducted at five injection locations in Area 3 (IW-24 to IW-28), each receiving 410 gallons of ABC®-Ole' solution.

2.3 Downgradient Areas 4 and 5 Supplemental Injections

Area 4 injections were conducted to address concentrations at former monitoring well G6M-06-01X and its replacement monitoring well G6M-13-02X . The spring 2015 injections included seven injection locations IW-29, IW-30, IW-31, IW-33, IW-34, IW-35, and IW-36. Each received 410 gallons of ABC® solution. The ABC® solution used in Area 4 did not include the addition of Ole' and ZVI to avoid the potential for mobilization of arsenic in downgradient areas.

Area 5 injections were conducted to address VOC concentrations in groundwater observed historically at locations G6M-02-05X, G6M-97-05B and G6M-13-01X and downgradient micro-wells XSA-12-95X, XSA-12-96X, XSA-12-97X and XSA-12-98X. Downgradient monitoring well G6M-13-04X was installed as a replacement for G6M-02-05X and is utilized in the injection program evaluations. Six Area 5 wells received injections of 410 gallons of ABC® solution (IW-1 through IW-6).

2.4 Redox-Tech ERD Injection Procedure

Redox performed substrate mixing on-site to meet the desired concentrations as specified by the Injection Work Plan. Several 500-gallon poly tanks were used as the mixing vessels. The ABC®/Ole'/ZVI/water solution concentrations and injection volumes for the five treatment areas are detailed within **Table 1**.

The injection system layout consisted of a 500-gallon poly tank, one air diaphragm pump, one air compressor, and injection lines. A chemical grout pump was implemented at the Geoprobe locations to move the ERD product into the formation.

Injections were conducted at one Geoprobe location or one injection well at a time.

All injection lines were cleared at the end of each day. Following the completion of all injections, the lines were flushed with water.

3.0 H&S FIELD MONITORING

H&S monitored injection activities and performed pre and post-injection monitoring of existing wellheads. Wellheads were screened using a flame ionization detector (FID) with a carbon tip to monitor for the presence of methane and a photoionization detector (PID) to monitor for VOCs. Depth to water (DTW) measurements were also recorded for each well. Field monitoring parameters and results can be found in **Table 1.**

4.0 ERD INJECTION ISSUES

Some minor issues occurred with the injection of the ERD product into pre-existing wellheads, which were quickly resolved. IW-7, IW-11, IW-19S experienced "daylighting", (product moving to the ground surface rather than into the formation) within the well casings, and IW-17D experienced daylighting outside of the casing. Wells in Areas 2, 3, 4, and 5 experienced no daylighting or other issues.

Direct push injections in the Source Area provided various issues including minor leaking of the rod string at rod joints, and clogging of the rod string with ZVI, but these issues were also quickly resolved. GP-3 and GP-9 experienced clogging from the ZVI, thus the rod string was pulled, cleaned, and re-advanced. During injection at GP-2, groundwater was forced out of adjacent monitoring well G6M-02-08X (located approximately 10 ft from injection point) while injecting at a depth of 54 ft (the adjacent well is screened at this depth). Daylighting occurred in GP-14 when injecting 24 ft bgs. The rod string was subsequently pulled and re-advanced within a foot of the original GP location. GP-15 experienced backpressure from 58 ft bgs to 64 ft bgs, and received no injection at these depths. As a result, injection of 260 gallons of ERD solution was performed at 58 ft bgs to try and ensure adequate injection of ERD product.

5.0 POST-INJECTION GROUNDWATER MONITORING

A post-injection groundwater sampling program was conducted at AOC 50 during the period September 9 to September 14, 2015. Selected monitoring wells in the Area 1 Source Area and in the downgradient Areas were sampled to evaluate the effectiveness of the injection program. Groundwater samples collected from a total of 18 wells at AOC 50 were analyzed by Accutest Laboratories for VOCs, total organic carbon (TOC), alkalinity, nitrates, sulfates, sulfides, dissolved arsenic, iron and manganese, ethane, ethene, and methane. In addition, AOC 50 groundwater monitoring wells were sampled during an annual groundwater sampling event conducted at Devens in October 2015 (**Figure 5**). The results of the post-injection sampling rounds are compared to sampling rounds conducted prior to the July injection event at AOC 50 in **Table 2**.

In addition, biannual groundwater samples were collected during the fall sampling event (October 13 to 16, 2015). These results were included for comparison and evaluation purposes.

6.0 CONCLUSIONS

A review of the pre and post-injection sampling data was conducted using Mann-Kendall statistical analysis, linear observations of analytical trends as well as observed dissolved oxygen, and oxidation-reduction potential values. Mann-Kendall calculations are included in Appendix A. Trends were analyzed in each area of concern and graphically represented in Appendix B. The charts indicate pre and post-injection sampling trends for PCE, TCE and methane (when available in the data set).

6.1 Area 1 - Former Drum Storage Area (FDSA)

ERD injections were completed at injection wells located near the FDSA in the spring of 2015. The injection program utilized injection wells IW-7, IW-8 and IW-11. Overall, PCE concentrations decreased within the FDSA with respect to high historical concentrations see **Table 3**. See **Appendix A** for statistical analysis and **Appendix B** for data trends.

As presented on **Table 2**, groundwater data in the FDSA generally exhibit a decline in PCE and TCE concentrations. Monitoring wells G6M-04-09X and G6M-04-10X are located downgradient of the FDSA and were sampled prior to and after the spring ERD injection program. Historical PCE and TCE concentrations are plotted and provided in **Appendix B.** At location G6M-04-09X, PCE ranged from a high of 7,400 ug/L in September 2004 to non-detect in 2015. Location G6M-04-10X ranged from a high of 420 ug/L in October 2010 to non-detect in 2015. Statistical analysis conducted on wells G6M-04-09X and G6M-04-10X indicate decreasing concentration trends with a greater than 95% confidence factor, see **Appendix A**.

Groundwater concentrations including methane were graphed over time for location G6M-04-10X located downgradient of the FDSA. The trend observed indicates a decline in TCE and PCE concentrations related to the ERD injections. An increase in methane concentrations as well as observed low dissolved oxygen and oxidation-reduction potential in monitored field parameters indicate active reductive dechlorination. **Figure 6** and 7 indicate methane concentrations pre and post injection.

6.2 Area 1 - Former Dry Well Area (FDW)

Monitoring wells included in 2015 sampling near the FDW include G6M-02-08X, G6M-13-05X G6M-03-01X, and G6M-93-13X (**Table 2)**. Monitoring well G6M-02-08X initially demonstrated high PCE concentrations (3,600 ug/l in January 2003), and currently the sample results indicate non detect. The decrease in PCE concentrations is attributed to the ERD injection program. This is observed by reviewing the low dissolved oxygen values, negative ORP and high methane concentrations. The groundwater sampling results for this monitoring well including methane and TCE, are presented in **Appendix B**.

Monitoring well G6M-13-05X was installed in January 2014 to replace G6M-04-12X. The concentration of PCE in groundwater sampled from monitoring well G6M-13-05X increased from 250 µg/L in January 2014 to 1,120 µg/L in October 2015. This has been attributed to a delay response to historical ERD injections **(Appendix B**).

Location G6M-03-01X shows a slight post-injection increase in PCE and TCE; however, the concentrations are lower than fall 2014 monitoring results (**Appendix B**). Concentrations of PCE and TCE at G6M-93-13X have been low to non-detect since October 2001. This trend continues for this well location with PCE and TCE being non detect at this location in 2015.

Statistical analysis conducted on G6M-02-08X PCE and TCE concentrations over time. The results indicated decreasing concentration trends. See **Appendix A**.

6.3 Area 1

Area 1 monitoring included G6M-03-01X. This well is located near the Former Parachute Tower. The concentrations at this monitoring location have fluctuated since its installation in 2009 from 380 µg/L in October 2009 to non-detect in June 2015. Fall sampling indicated an increase in PCE and TCE concentrations most likely attributed to injections of ERD substrate at locations IW-13D, IW-15D and IW16D. **Appendix B** indicates the concentration trends over time. Statistical analysis conducted for this location, indicated a stable concentration trend with a 76.5% confidence factor. See **Appendix A**.

6.4 Area 2

The historical data indicates a definitive overall decreasing concentration trend for PCE since 2007, and that the ERD process is continuing to work toward completion, which is confirmed by a decline in dechlorination by-product concentrations and the sustained evolution of high ethene and methane concentrations. It is noted that the variation in both the 2011 and 2013 data suggest that the rebound periods were short-lived and that the ERD process continues to work toward completion, as demonstrated by non-detections for PCE in both 2011, 2013, 2014, and 2015 with a decline in dechlorination by-product concentrations. See **Appendix B** for data trends.

Monitoring wells sampled in the vicinity of Area 2 in 2015 include G6M-02-01X, G6M-04-01X, G6M-04-02X and G6M-04-03X. Concentrations of PCE at G6M-02-01X remain near the detection limit in October 2015 from at high concentration of 1,900 ug/L detected in September 2007. PCE and TCE concentrations for this location are plotted with methane concentrations in **Appendix B**. Statistical trends for this location indicate No Trend for the TCE concentrations and a decreasing trend for PCE concentrations. The analysis is contained in **Appendix A**.

Concentrations of PCE and TCE at location G6M-04-01X were non-detect in monitoring conducted in 2015 **Appendix B**. Statistical analysis of G6M-04-01X indicates decreasing concentration trends (**Appendix A**).

PCE and TCE at G6M-04-03X are plotted with methane concentrations in **Appendix B.** Increased methane concentrations since 2009 and decreased PCE and TCE concentrations indicates reductive dechlorination is effectively reducing the compounds of concern. Statistical analysis conducted for PCE and TCE at G6M-04-03X indicated decreasing and no trend, respectively. These figures are located in **Appendix A**.

G6M-04-02X is located immediately upgradient of the Area 3 injection well transect. Concentrations of PCE and TCE were detected at this location at 105 ug/l and 30.5 ug/L, respectively in October 2015 (**Appendix B**). Statistical analysis conducted for this well location indicated decreasing concentration trends for PCE and stable concentration trends for TCE, see **Appendix A**.

6.5 Area 3

Groundwater monitoring results for sampled wells near the Area 3 injection transect showed levels of PCE and TCE near or below the limits of detection. Historical methane, PCE and TCE data are presented graphically for monitoring well G6M-03-07X in **Appendix B**. This well showed a high PCE concentration of 1,700 ug/L in September 2004. Elevated methane concentrations, PCE concentrations near or below the limit of detection since December 2007, low dissolved oxygen concentrations and negative ORP values indicate effective reductive dechlorination. Similarly, monitoring well G6M-04-04X indicates the same trends (**Appendix B**). The geochemical environment of groundwater near Area 3 remains reductive and the remnant VOCs are expected to fully degrade. See **Appendix B** for data trends. Statistical analysis performed on G6M 03-07X and G6M-04-04X indicates decreasing concentration trends; see **Appendix A**.

6.6 Area 4

Overall concentrations of PCE and TCE in Area 4 are near the limits of detection for the sampled monitoring wells. PCE and TCE concentrations were detected at monitoring well G6M-13-02X. The historical data for this monitoring well are presented in **Appendix B.** Concentrations of PCE and TCE in this monitoring well are decreasing. Pre-injection monitoring indicated a PCE concentration of 105 ug/L. Post injection PCE concentrations in this well were lower (69.6 ug/l) in October 2015. See **Appendix B** for data trends. Statistical concentration trends indicated stable concentrations for PCE and TCE at this location, see **Appendix A**.

6.7 Area 5

Monitoring wells G6M-13-01X, G6M-13-04X, and G6M-97-05B indicated detections of TCE and PCE in Area 5. These wells are located downgradient and to the west of the Area 5 injection well transect (**Figure 2**).

Concentrations of PCE and TCE detected at G6M-97-05B are plotted on **Appendix B.** The concentration of PCE in this monitoring well has increased from 5.7 ug/l in October 2011 to 117 ug/L in October 2015. Statistical analysis for this location indicates an increasing concentration trend for PCE and TCE. See **Appendix A**. Dissolved oxygen values are over 1.0 mg/L and the ORP is a positive value over 100 indicating aerobic conditions are present. Reductive dechlorination requires an anaerobic condition with dissolved oxygen values less than 1.0 mg/L and negative ORP values. Additional injection events and monitoring should be conducted in this area.

Monitoring well G6M-13-04X PCE concentrations increased from 1.7 ug/l in October 2014 to 18.7 ug/l in October 2015 (**Appendix B**); however, levels are below historical highs and may represent fluctuations due to the ERD events. Dissolved oxygen and ORP values indicate a reducing environment. It is anticipated the PCE and TCE concentrations will decrease as a result of these conditions.

Monitoring well G6M-03-10X is located downgradient from the injection well points and shows PCE and TCE to be non-detect in September 2015 and October 2015 as well as elevated methane, low dissolved oxygen and negative ORP indicating reductive conditions **(Appendix B).**

7.0 RECOMMENDATIONS

The data overall indicate decreasing or stable trends in all the monitoring locations with the exception of G6M-97-05B for PCE and TCE. This well is located in Area 5. The concentrations at this well were 89.4 ppb (PCE) and 4.8 ppb (TCE) when sampled in June 2015 for the pre-injection event. Samples collected during the fall 2015 sampling event indicated an increase to 117 ppb (PCE) and 6.90 ppb (TCE). An evaluation of groundwater flow paths, groundwater concentrations and ABC injection points indicates the well is located near the northwestern edge of the treatment zone in Area 5. It is recommended that additional injections occur upgradient of G6M-97-05B.

It is also recommended additional monitoring be conducted in February 2016 and April 2016 for dissolved oxygen, ORP, methane and VOCs at the following locations:

Area 1

G6M-02-08X
G6M-13-05X
G6M-13-06X
G6M-04-09X
G6M-04-10X
G6M-03-01X

Area 2

G6M-02-01X
G6M-04-03X

Area 3

G6M-04-02X

Area 4

G6M-06-01X (may require redevelopment)
G6M-13-02X

Area 5

G6M-02-05X(may require redevelopment)
G6M-97-05B
G6M-13-04X
G6M-13-01X
G6M-02-07X

Upon review of the data, a new ERD program will be developed.

Wells indicating slow acceptance or daylighting of injected material should be mechanically surged prior to the next injection event. Each well should be developed using a drill rig or similar equipment.

NOTES:
Annual Fall LTM Sampling - October 2015. U: Compound not detected above detection limit.
Post ERD Sampling - September 2015. J: Estimated concentration.
Spring sampling event - June 2015. - Compound not analyzed for.
ug/L = microgram per liter
mg/L = milligram per liter

Notes:

1. At least four independent sampling events per well are required for calculating the trend. *Methodology is valid for 4 to 40 samples.*
2. Confidence in Trend = Confidence (in percent) that constituent concentration is increasing (S>0) or decreasing (S<0): >95% = Increasing or Decreasing; ≥ 90% = Probably Increasing or Probably Decreasing; < 90% and S>0 = No Trend; < 90%, S≤0, and COV ≥ 1 = No Trend; < 90% and COV < 1 = Stable.
3. Methodology based on "MAROS: A Decision Support System for Optimizing Monitoring Plans", J.J. Aziz, M. Ling, H.S. Rifai, C.J. Newell, and J.R. Gonzales, *Ground Water*, 41(3):355-367, 2003.

65.91		XSA-12-98X		60-70	147.44-137.44	Geochemistry, Metals and	
		[illegible]	Monitor Geochemistry and metals crossgradient and	130-135	147.44-137.44	VOCs2	
64.20	Area 5	G6M-13-01X	downgradient of ERD injection wells at Area 5.	125-135	140.15-130.15	VOCs and Metals	Annual

Notes:

Metals - dissolved arsenic, iron, and manganese

Full Suite- VOCs, metals, nitrate, sulfate/sulfide, alkalinity (fall only), methane, ethane, ethene, and total organic carbon

Field parameters to be measured include: pH, dissolved oxygen, oxidation/reduction potential, specific conductivity, turbidty, and temperature

1 Groundwater monitoring for geochemistry parameters and dissolved metals conducted during the spring LTM event Groundwater monitoring for geochemistry, with samples submitted to laboratory for various analyses, conducted during the fall LTM event

2 MicroWells® XSA-12-95X through XSA-12-98X installed in Spring 2012 Samples will be collected for VOCs and metals laboratory analyses during the subsequent annual sampling events

3 Annual fall LTM sampling of G6M-04-31X and G6M-04-22X for arsenic analysis will be conducted when biennial laboratory samples are not collected Off-year laboratory analysis of arsenic will continue at these wells until it is determined that arsenic has reached its maximum concentrations After off-year analysis of arsenic is discontinued, arsenic will continue to be sampled during the biennial sampling events

4 Monitoring wells installed in CY2013 will replace the existing monitoring wells that were converted to injection wells in CY2013 G6M-13-04X replaces G6M-02-05X (coverted in July 2013); G6M-13-02X replaces G6M-06-01X (converted in July 2013); G6M-13-06X replaces G6M-96-13B (converted in December 2013); G6M-13-05X replaces G6M-04-12X (converted July 2014)

5 New monitoring wells installed in CY2013 (G6M-13 series) were sampled for VOCs in January 2014 as part of the Vertical Groundwater Profiling Investigation

90 FITCHBURG ROAD, AYER.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client:	H&S Environmental	**Job No**	MC39371
Site:	Fort Devens, AOC50, Devens, MA	**Report Date**	7/6/2015 8:38:48 AM

6 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were collected on 06/16/2015 and were received at Accutest on 06/16/2015 properly preserved, at 1.9 Deg. C and intact. These Samples received an Accutest job number of MC39371. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix: AQ **Batch ID:** MSG5403

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.

Matrix: AQ **Batch ID:** MSV1461

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39596-4MS, MC39596-4MSD were used as the QC samples indicated.
- MC39596-4MS Recovery(s) for Dichlorodifluoromethane are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- RPD(s) for MSD for Dichlorodifluoromethane are outside control limits for sample MC39596-4MSD. High RPD due to possible matrix interference and/or sample non-homogeneity.
- MSV1461-BS for Acetone: Outside control limits. Associated samples are non-detect for this compound.

Matrix: AQ **Batch ID:** MSV1463

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.

Volatiles by GC By Method VRSK 175

Matrix: AQ **Batch ID:** GBA1498

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC39371-3DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- RPD(s) for Duplicate for Methane are outside control limits for sample MC39371-3DUP. High RPD due to possible matrix interference and/or sample non-homogeneity.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP24743

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39250-5FMS, MC39250-5FMSD, MC39250-5FSDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Aluminum, Copper, Iron, Nickel, Potassium, Silver, Zinc are outside control limits for sample MP24743-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Metals By Method SW846 6020A

Matrix: AQ	Batch ID: MP24743A

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39250-5FMS, MC39250-5FMSD, MC39250-5FSDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP24743A-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Metals By Method SW846 7470A

Matrix: AQ	Batch ID: MP24748

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39250-5MS, MC39250-5MSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ	Batch ID: N:GP90020

- MC39371-3, 4, 5, 6 for Sulfate: Analysis performed at Accutest Laboratories, Dayton, NJ.

Wet Chemistry By Method EPA 353.2

Matrix: AQ	Batch ID: GP19281

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39401-4MS, MC39401-4DUP were used as the QC samples for Nitrogen, Nitrate + Nitrite.

Matrix: AQ	Batch ID: R36813

- MC39371-3 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	Batch ID: R36814

- MC39371-4 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	Batch ID: R36815

- MC39371-5 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	Batch ID: R36816

- MC39371-6 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Wet Chemistry By Method SM 21 4500 NO2 B

Matrix: AQ	Batch ID: GP19256

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39401-6DUP, MC39401-6MS were used as the QC samples for Nitrogen, Nitrite.

Wet Chemistry By Method SM21 2320B

Matrix: AQ **Batch ID:** GN50997

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39250-5DUP, MC39250-5MS were used as the QC samples for Alkalinity, Total as CaCO3.

Wet Chemistry By Method SM21 4500 S F

Matrix: AQ **Batch ID:** GN50984

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39401-5DUP, MC39401-5MS were used as the QC samples for Sulfide.

Wet Chemistry By Method SW846 9060

Matrix: AQ **Batch ID:** GP19289

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39401-1MS, MC39401-1MSD were used as the QC samples for Total Organic Carbon.

The Accutest Laboratories of New England certifies that all analysis were performed within method specification. It is further recommended that this report to be used in its entirety.The Accutest Laboratories of NE, Laboratory Director or assignee as verified by the signature on the cover page has authorized the release of this report(MC39371).

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	Accutest Labs of New England, Inc.	**Job No**	MC39371
Site:	HSMAW: Fort Devens, AOC50, Devens, MA	**Report Date**	6/24/2015 8:33:57 AM

On 06/19/2015, 4 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 3.8 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of MC39371 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ **Batch ID:** GP90020

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB97130-3DUP, JB97130-3MS were used as the QC samples for Sulfate.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Accutest Job Number: MC39371 **Client:** H\&S **Project:** FT DEVENS AOC 50

Date / Time Received: 6/16/2015 4:10:00 PM **Delivery Method:** **Airbill #'s:**

Cooler Temps (Initial/Adjusted): #1: (1.9/1.9);

Cooler Security

	Y	N
1. Custody Seals Present:	☑	☐
2. Custody Seals Intact:	☑	☐
3. COC Present:	☑	☐
4. Smpl Dates/Time OK	☑	☐

Cooler Temperature

	Y	N
1. Temp criteria achieved:	☑	☐
2. Thermometer ID:	G1;	
3. Cooler media:	Ice (Bag)	
4. No. Coolers:	1	

Quality Control_Preservation

	Y	N	N/A
1. Trip Blank present / cooler:	☐	☑	☐
2. Trip Blank listed on COC:	☐	☑	☐
3. Samples preserved properly:	☑	☐	
4. VOCs headspace free:	☑	☐	☐

Sample Integrity - Documentation

	Y	N
1. Sample labels present on bottles:	☑	☐
2. Container labeling complete:	☑	☐
3. Sample container label / COC agree:	☑	☐

Sample Integrity - Condition

	Y	N
1. Sample recvd within HT:	☑	☐
2. All containers accounted for:	☑	☐
3. Condition of sample:	Intact	

Sample Integrity - Instructions

	Y	N	N/A
1. Analysis requested is clear:	☑	☐	
2. Bottles received for unspecified tests	☐	☑	
3. Sufficient volume recvd for analysis:	☑	☐	
4. Compositing instructions clear:	☐	☐	☑
5. Filtering instructions clear:	☑	☐	☐

(a) Outside control limits. Associated samples are non-detect for this compound.
(b) Outside control limits due to possible matrix interference. Refer to Blank Spike.
(c) High RPD due to possible matrix interference and/or sample non-homogeneity.

* Sample used for QC is not from job MC39371

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: H&S Environmental **Job No** MC39401

Site: Fort Devens, AOC50, Devens, MA **Report Date** 7/2/2015 9:17:25 AM

7 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were collected on 06/17/2015 and were received at Accutest on 06/17/2015 properly preserved, at 2.9 Deg. C and intact. These Samples received an Accutest job number of MC39401. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix: AQ **Batch ID:** MSV1461

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39596-4MS, MC39596-4MSD were used as the QC samples indicated.
- MSV1461-BS for Acetone: Outside control limits. Associated samples are non-detect for this compound.
- MC39596-4MS for Dichlorodifluoromethane are outside control limits due to possible matrix interference. Refer to Blank Spike.
- RPD(s) for MC39596-4MSD for Dichlorodifluoromethane are outside control limits. High RPD due to possible matrix interference and/or sample non-homogeneity.

Matrix: AQ **Batch ID:** MSV1463

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.

Volatiles by GC By Method VRSK 175

Matrix: AQ **Batch ID:** GBA1499

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39401-3DUP were used as the QC samples indicated.
- RPD(s) for MC39401-3DUP for Ethene, Methane are outside control limits. High RPD due to possible matrix interference and/or sample non-homogeneity.

Matrix: AQ **Batch ID:** GBA1500

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39401-6DUP were used as the QC samples indicated.
- RPD(s) for MC39401-6DUP for Methane are outside control limits. High RPD due to possible matrix interference and/or sample non-homogeneity.

Metals By Method SW846 6010C

Matrix: AQ	Batch ID: MP24763

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39372-1MS, MC39372-1MSD, MC39372-1SDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Aluminum, Chromium, Copper, Nickel, Silver, Vanadium, Zinc are outside control limits for sample MP24763-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Metals By Method SW846 6020A

Matrix: AQ	Batch ID: MP24763A

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39372-1MS, MC39372-1MSD, MC39372-1SDL were used as the QC samples for metals.

Metals By Method SW846 7470A

Matrix: AQ	Batch ID: MP24766

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39435-8FMS, MC39435-8FMSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ	Batch ID: N:GP90047

- Analysis performed at Accutest Laboratories, Dayton, NJ.

Wet Chemistry By Method EPA 353.2

Matrix: AQ	Batch ID: GP19281

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39401-4MS, MC39401-4DUP were used as the QC samples for Nitrogen, Nitrate + Nitrite.

Matrix: AQ	Batch ID: R36812

- MC39401-4 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	Batch ID: R36818

- MC39401-7 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	Batch ID: R36819

- MC39401-5 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	Batch ID: R36820

- MC39401-3 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	Batch ID: R36821

- MC39401-6 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Wet Chemistry By Method SM 21 4500 NO2 B

Matrix: AQ	**Batch ID:** GP19256

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39401-6DUP, MC39401-6MS were used as the QC samples for Nitrogen, Nitrite.

Wet Chemistry By Method SM21 2320B

Matrix: AQ	**Batch ID:** GN51008

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39218-3DUP, MC39218-3MS were used as the QC samples for Alkalinity, Total as CaCO3.

Wet Chemistry By Method SM21 4500 S F

Matrix: AQ	**Batch ID:** GN50984

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39401-5DUP, MC39401-5MS were used as the QC samples for Sulfide.

Wet Chemistry By Method SM21 5310 B

Matrix: AQ	**Batch ID:** GP19293

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39435-6MS, MC39435-6MSD were used as the QC samples for Total Organic Carbon.

Wet Chemistry By Method SW846 9060

Matrix: AQ	**Batch ID:** GP19289

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39401-1MS, MC39401-1MSD were used as the QC samples for Total Organic Carbon.

The Accutest Laboratories of New England certifies that all analysis were performed within method specification. It is further recommended that this report to be used in its entirety.The Accutest Laboratories of NE, Laboratory Director or assignee as verified by the signature on the cover page has authorized the release of this report(MC39401).

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	Accutest Labs of New England, Inc.	**Job No**	MC39401
Site:	HSMAW: Fort Devens, AOC50, Devens, MA	**Report Date**	6/24/2015 5:20:02 PM

On 06/19/2015, 5 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 4.1 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of MC39401 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ **Batch ID:** GP90047

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39401-5MS were used as the QC samples for Sulfate.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: MC39401 **Client:** H&S **Project:** AOC 50 FT. DEVENS

Date / Time Received: 6/17/2015 3:30:00 PM **Delivery Method:** **Airbill #'s:**

Cooler Temps (Initial/Adjusted): #1: (2.9/2.9);

Cooler Security

	Y	N		Y	N
1. Custody Seals Present:	☑	☐	3. COC Present:	☑	☐
2. Custody Seals Intact:	☑	☐	4. Smpl Dates/Time OK	☑	☐

Cooler Temperature

	Y	N
1. Temp criteria achieved:	☑	☐
2. Thermometer ID:	G1;	
3. Cooler media:	Ice (Bag)	
4. No. Coolers:	1	

Quality Control_Preservation

	Y	N	N/A
1. Trip Blank present / cooler:	☐	☑	☐
2. Trip Blank listed on COC:	☐	☑	☐
3. Samples preserved properly:	☑	☐	
4. VOCs headspace free:	☑	☐	☐

Sample Integrity - Documentation

	Y	N
1. Sample labels present on bottles:	☑	☐
2. Container labeling complete:	☑	☐
3. Sample container label / COC agree:	☑	☐

Sample Integrity - Condition

	Y	N
1. Sample recvd within HT:	☑	☐
2. All containers accounted for:	☑	☐
3. Condition of sample:	Intact	

Sample Integrity - Instructions

	Y	N	N/A
1. Analysis requested is clear:	☑	☐	
2. Bottles received for unspecified tests	☐	☑	
3. Sufficient volume recvd for analysis:	☑	☐	
4. Compositing instructions clear:	☐	☐	☑
5. Filtering instructions clear:	☑	☐	☐

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: H&S Environmental **Job No** MC39435

Site: Fort Devens, AOC50, Devens, MA **Report Date** 7/2/2015 10:37:00 AM

8 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were collected on 06/18/2015 and were received at Accutest on 06/18/2015 properly preserved, at 1.1 Deg. C and intact. These Samples received an Accutest job number of MC39435. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix: AQ **Batch ID:** MSV1463

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.

Volatiles by GC By Method VRSK 175

Matrix: AQ **Batch ID:** GBA1502

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC39435-3DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP24763

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39372-1MS, MC39372-1MSD, MC39372-1SDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Aluminum, Chromium, Copper, Nickel, Silver, Vanadium, Zinc are outside control limits for sample MP24763-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Metals By Method SW846 6020A

Matrix: AQ **Batch ID:** MP24763A

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39372-1MS, MC39372-1MSD, MC39372-1SDL were used as the QC samples for metals.

Metals By Method SW846 7470A

Matrix: AQ	**Batch ID:** MP24766

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39435-8FMS, MC39435-8FMSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ	**Batch ID:** N:GP90084

- Analysis performed at Accutest Laboratories, Dayton, NJ.

Wet Chemistry By Method EPA 353.2

Matrix: AQ	**Batch ID:** GP19281

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39401-4MS, MC39401-4DUP were used as the QC samples for Nitrogen, Nitrate + Nitrite.

Matrix: AQ	**Batch ID:** GP19282

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39435-6DUP, MC39435-6MS were used as the QC samples for Nitrogen, Nitrate + Nitrite.

Matrix: AQ	**Batch ID:** R36817

- MC39435-3 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R36822

- MC39435-5 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R36823

- MC39435-7 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R36824

- MC39435-8 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R36830

- MC39435-6 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Wet Chemistry By Method SM 21 4500 NO2 B

Matrix: AQ	**Batch ID:** GP19267

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39435-3MS, MC39435-3DUP were used as the QC samples for Nitrogen, Nitrite.
- RPD(s) for Duplicate for Nitrogen, Nitrite are outside control limits for sample GP19267-D1. RPD acceptable due to low duplicate and sample concentrations.

Wet Chemistry By Method SM21 2320B

Matrix: AQ	**Batch ID:** GN51008

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39218-3DUP, MC39218-3MS were used as the QC samples for Alkalinity, Total as CaCO3.

Matrix: AQ	**Batch ID:** GN51031

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3DUP, MC39533-3MS were used as the QC samples for Alkalinity, Total as CaCO3.

Wet Chemistry By Method SM21 4500 S F

Matrix: AQ	**Batch ID:** GN50984

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39401-5DUP, MC39401-5MS were used as the QC samples for Sulfide.

Matrix: AQ	**Batch ID:** GN51004

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3DUP, MC39533-3MS were used as the QC samples for Sulfide.

Wet Chemistry By Method SM21 5310 B

Matrix: AQ	**Batch ID:** GP19293

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39435-6MS, MC39435-6MSD were used as the QC samples for Total Organic Carbon.

The Accutest Laboratories of New England certifies that all analysis were performed within method specification. It is further recommended that this report to be used in its entirety.The Accutest Laboratories of NE, Laboratory Director or assignee as verified by the signature on the cover page has authorized the release of this report(MC39435).

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	Accutest Labs of New England, Inc.	**Job No**	MC39435
Site:	HSMAW: Fort Devens, AOC50, Devens, MA	**Report Date**	6/25/2015 2:12:07 PM

On 06/23/2015, 5 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 5.3 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of MC39435 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ **Batch ID:** GP90084

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB97596-7DUP, JB97596-7MS were used as the QC samples for Sulfate.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: MC39435 **Client:** H&S **Project:** FT DEVENS AOC50

Date / Time Received: 6/18/2015 4:30:00 PM **Delivery Method:** **Airbill #'s:**

Cooler Temps (Initial/Adjusted): #1: (1.1/1.1);

Cooler Security	Y	N		Y	N
1. Custody Seals Present:	☑	☐	3. COC Present:	☑	☐
2. Custody Seals Intact:	☑	☐	4. Smpl Dates/Time OK	☑	☐

Cooler Temperature	Y	N
1. Temp criteria achieved:	☑	☐
2. Thermometer ID:	G1;	
3. Cooler media:	Ice (Bag)	
4. No. Coolers:	1	

Quality Control_Preservation	Y	N	N/A
1. Trip Blank present / cooler:	☐	☑	☐
2. Trip Blank listed on COC:	☐	☑	☐
3. Samples preserved properly:	☑	☐	
4. VOCs headspace free:	☑	☐	☐

Sample Integrity - Documentation	Y	N
1. Sample labels present on bottles:	☑	☐
2. Container labeling complete:	☑	☐
3. Sample container label / COC agree:	☑	☐

Sample Integrity - Condition	Y	N
1. Sample recvd within HT:	☑	☐
2. All containers accounted for:	☑	☐
3. Condition of sample:	Intact	

Sample Integrity - Instructions	Y	N	N/A
1. Analysis requested is clear:	☑	☐	
2. Bottles received for unspecified tests	☐	☑	
3. Sufficient volume recvd for analysis:	☑	☐	
4. Compositing instructions clear:	☐	☐	☑
5. Filtering instructions clear:	☑	☐	☐

ACCUTEST LABORATORIES

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: H&S Environmental **Job No** MC39479

Site: Fort Devens, AOC50, Devens, MA **Report Date** 7/8/2015 2:25:09 PM

6 Sample(s) were collected on 06/19/2015 and were received at Accutest on 06/19/2015 properly preserved, at 2 Deg. C and intact. These Samples received an Accutest job number of MC39479. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix AQ **Batch ID:** MSV1463

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.

Matrix AQ **Batch ID:** MSV1465

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- RPD of MSV1465-BSD for Dichlorodifluoromethane: Outside control limits. Individual spike recoveries within acceptance limits.

Volatiles by GC By Method VRSK 175

Matrix AQ **Batch ID:** GBA1504

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3MS, MC39533-3MSD were used as the QC samples indicated.
- MC39533-3MSD for Methane: Outside control limits due to high level in sample relative to spike amount.

Metals By Method SW846 6010C

Matrix AQ	Batch ID: MP24763

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39372-1MS, MC39372-1MSD, MC39372-1SDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Aluminum, Chromium, Copper, Nickel, Silver, Vanadium, Zinc are outside control limits for sample MP24763-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Matrix AQ	Batch ID: MP24785

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39372-1FSDL, MC39533-3FMS, MC39533-3FMSD, MC39372-1FSDL were used as the QC samples for metals.
- MS/MSD Recovery(s) for Manganese are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.
- RPD(s) for Serial Dilution for Aluminum, Cadmium, Chromium, Copper, Zinc are outside control limits for sample MP24785-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- MSD for Sodium: Spike duplicate recovery indicates possible matrix interference and/or sample nonhomogeneity.

Metals By Method SW846 6020A

Matrix AQ	Batch ID: MP24763A

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39372-1MS, MC39372-1MSD, MC39372-1SDL were used as the QC samples for metals.

Matrix AQ	Batch ID: MP24785A

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39372-1FSDL, MC39533-3FMSD were used as the QC samples for metals.
- MP24785A-S3 for Arsenic: Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.

Metals By Method SW846 7470A

Matrix AQ	Batch ID: MP24766

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39435-8FMS, MC39435-8FMSD were used as the QC samples for metals.

Matrix AQ	Batch ID: MP24781

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3FMS, MC39533-3FMSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix AQ	**Batch ID:** N:GP90081

- Sulfate: Analysis performed at Accutest Laboratories, Dayton, NJ.

Wet Chemistry By Method EPA 353.2

Matrix AQ	**Batch ID:** GP19282

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39435-6DUP, MC39435-6MS were used as the QC samples for Nitrogen, Nitrate + Nitrite.

Matrix AQ	**Batch ID:** R36825

- MC39479-1 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix AQ	**Batch ID:** R36826

- MC39479-2 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix AQ	**Batch ID:** R36827

- MC39479-3 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix AQ	**Batch ID:** R36828

- MC39479-4 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix AQ	**Batch ID:** R36829

- MC39479-6 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Wet Chemistry By Method SM 21 4500 NO2 B

Matrix AQ	**Batch ID:** GP19267

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39435-3MS, MC39435-3DUP were used as the QC samples for Nitrogen, Nitrite.
- RPD(s) for Duplicate for Nitrogen, Nitrite are outside control limits for sample GP19267-D1. RPD acceptable due to low duplicate and sample concentrations.

Wet Chemistry By Method SM21 2320B

Matrix AQ	**Batch ID:** GN51031

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3DUP, MC39533-3MS were used as the QC samples for Alkalinity, Total as CaCO3.

Wet Chemistry By Method SM21 4500 S F

Matrix AQ	**Batch ID:** GN51004

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3DUP, MC39533-3MS were used as the QC samples for Sulfide.

Wet Chemistry By Method SM21 5310 B

Matrix AQ **Batch ID:** GP19293

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39435-6MS, MC39435-6MSD were used as the QC samples for Total Organic Carbon.

The Accutest Laboratories of New England certifies that all analysis were performed within method specification. It is further recommended that this report to be used in its entirety.The Accutest Laboratories of NE, Laboratory Director or assignee as verified by the signature on the cover page has authorized the release of this report(MC39479).

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	Accutest Labs of New England, Inc.	**Job No**	MC39479
Site:	HSMAW: Fort Devens, AOC50, Devens, MA	**Report Date**	6/26/2015 2:41:30 PM

On 06/23/2015, 5 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 5.3 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of MC39479 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ **Batch ID:** GP90081

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB97390-1DUP, MC39479-3MS were used as the QC samples for Sulfate.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: MC39479 **Client:** H&S ENV **Project:** FT DEVENS AOC 50

Date / Time Received: 6/19/2015 3:00:00 PM **Delivery Method:** **Airbill #'s:**

Cooler Temps (Initial/Adjusted): #1: (2/2);

Cooler Security	Y	N		Y	N
1. Custody Seals Present:	☑	☐	3. COC Present:	☑	☐
2. Custody Seals Intact:	☑	☐	4. Smpl Dates/Time OK	☑	☐

Cooler Temperature	Y	N
1. Temp criteria achieved:	☑	☐
2. Thermometer ID:	G1;	
3. Cooler media:	Ice (Bag)	
4. No. Coolers:	1	

Quality Control_Preservation	Y	N	N/A
1. Trip Blank present / cooler:	☐	☑	☐
2. Trip Blank listed on COC:	☐	☑	☐
3. Samples preserved properly:	☑	☐	
4. VOCs headspace free:	☑	☐	☐

Sample Integrity - Documentation	Y	N
1. Sample labels present on bottles:	☑	☐
2. Container labeling complete:	☑	☐
3. Sample container label / COC agree:	☑	☐

Sample Integrity - Condition	Y	N
1. Sample recvd within HT:	☑	☐
2. All containers accounted for:	☑	☐
3. Condition of sample:	Intact	

Sample Integrity - Instructions	Y	N	N/A
1. Analysis requested is clear:	☑	☐	
2. Bottles received for unspecified tests	☐	☑	
3. Sufficient volume recvd for analysis:	☑	☐	
4. Compositing instructions clear:	☐	☐	☑
5. Filtering instructions clear:	☑	☐	☐

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: H&S Environmental **Job No** MC39533

Site: Fort Devens, AOC50, Devens, MA **Report Date** 7/13/2015 5:41:53 PM

4 Sample(s) were collected on 06/22/2015 and were received at Accutest on 06/22/2015 properly preserved, at 1.4 Deg. C and intact. These Samples received an Accutest job number of MC39533. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix	AQ	Batch ID:	MSV1467

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC39533-3MS, MC39533-3MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- RPD of MSV1467-BSD for Acetone: Outside control limits. Individual spike recoveries within acceptance limits.
- MC39533-3MS/MSD for 1,2,3-Trichloropropane: Outside DoD control limits, but within in-house control limits.

Volatiles by GC By Method VRSK 175

Matrix	AQ	Batch ID:	GBA1504

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC39533-3MS, MC39533-3MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- MC39533-3MSD for Methane: Outside control limits due to high level in sample relative to spike amount.

Metals By Method SW846 6010C

Matrix	AQ	Batch ID:	MP24785

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39372-1FSDL, MC39533-3FMS, MC39533-3FMSD, MC39372-1FSDL were used as the QC samples for metals.
- MS/MSD Recovery(s) for Manganese are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.
- RPD(s) for Serial Dilution for Aluminum, Cadmium, Chromium, Copper, Zinc are outside control limits for sample MP24785-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- MC39533-3F for Manganese: Matrix spike and Duplicate recoveries outside of the control limits. J-flag applied.
- MC39533-3F for Sodium: Matrix spike duplicate recovery outside of the control limits. J-flag applied.
- MSD for Sodium: Outside of the control limits. Spike duplicate recovery indicates possible matrix interference and/or sample nonhomogeneity.

Metals By Method SW846 6020A

Matrix	AQ	Batch ID:	MP24785A

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39372-1FSDL, MC39533-3FMSD were used as the QC samples for metals.
- MC39533-3F for Arsenic: Matrix spike and Duplicate recoveries outside of the control limits. J-flag applied.
- MS/MSDfor Arsenic: Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.

Metals By Method SW846 7470A

Matrix	AQ	Batch ID:	MP24781

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3FMS, MC39533-3FMSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix	AQ	Batch ID:	N:GP90193

- Sulfate: Analysis performed at Accutest Laboratories, Dayton, NJ.

Wet Chemistry By Method EPA 353.2

Matrix	AQ	Batch ID:	GP19320

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3DUP, MC39533-3MS were used as the QC samples for Nitrogen, Nitrate + Nitrite.

Matrix	AQ	Batch ID:	R36873

- MC39533-3 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix	AQ	Batch ID:	R36874

- MC39533-2 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix	AQ	Batch ID:	R36875

- MC39533-4 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Wet Chemistry By Method SM 21 4500 NO2 B

Matrix	AQ	Batch ID:	GP19276

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3DUP, MC39533-3MS were used as the QC samples for Nitrogen, Nitrite.

Wet Chemistry By Method SM21 2320B

Matrix AQ	**Batch ID:** GN51031

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3DUP, MC39533-3MS were used as the QC samples for Alkalinity, Total as CaCO3.

Wet Chemistry By Method SM21 4500 S F

Matrix AQ	**Batch ID:** GN51004

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3DUP, MC39533-3MS were used as the QC samples for Sulfide.

Matrix AQ	**Batch ID:** GN51053

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-2DUP, MC39533-2MS were used as the QC samples for Sulfide.

Wet Chemistry By Method SM21 5310 B

Matrix AQ	**Batch ID:** GP19317

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3MS, MC39533-3MSD were used as the QC samples for Total Organic Carbon.

The Accutest Laboratories of New England certifies that all analysis were performed within method specification. It is further recommended that this report to be used in its entirety.The Accutest Laboratories of NE, Laboratory Director or assignee as verified by the signature on the cover page has authorized the release of this report(MC39533).

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: Accutest Labs of New England, Inc. **Job No** MC39533

Site: HSMAW: Fort Devens, AOC50, Devens, MA **Report Date** 6/30/2015 2:54:11 PM

On 06/24/2015, 3 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 4.5 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of MC39533 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ **Batch ID:** GP90193

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3DUP, MC39533-3MS were used as the QC samples for Sulfate.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: MC39533 **Client:** HES ENV **Immediate Client Services Action Required:** No

Date / Time Received: 6/22/2015 5:10:00 PM **Delivery Method:**

Project: **No. Coolers:** 1 **Airbill #'s:**

Cooler Security

	Y	N
1. Custody Seals Present:	☑	☐
2. Custody Seals Intact:	☑	☐
3. COC Present:	☑	☐
4. Smpl Dates/Time OK	☑	☐

Cooler Temperature

	Y	N
1. Temp criteria achieved:	☑	☐
2. Cooler temp verification:	Infared Gun	
3. Cooler media:	Ice (Bag)	

Quality Control_Preservation

	Y	N	N/A
1. Trip Blank present / cooler:	☐	☑	
2. Trip Blank listed on COC:	☐	☑	
3. Samples preserved properly:	☑	☐	
4. VOCs headspace free:	☑	☐	☐

Sample Integrity - Documentation

	Y	N
1. Sample labels present on bottles:	☑	☐
2. Container labeling complete:	☑	☐
3. Sample container label / COC agree:	☑	☐

Sample Integrity - Condition

	Y	N
1. Sample rec'd within HT:	☑	☐
2. All containers accounted for:	☑	☐
3. Condition of sample:	Intact	

Sample Integrity - Instructions

	Y	N	N/A
1. Analysis requested is clear:	☑	☐	
2. Bottles received for unspecified tests	☑	☐	
3. Sufficient volume rec'd for analysis:	☑	☐	
4. Compositing instructions clear:	☐	☐	☑
5. Filtering instructions clear:	☑	☐	☐

Comments

-3 MS/MSD volume received, not requested on COC.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client:	H&S Environmental	**Job No**	MC39548
Site:	Fort Devens, AOC50, Devens, MA	**Report Date**	7/7/2015 11:49:05 AM

4 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were collected on 06/23/2015 and were received at Accutest on 06/23/2015 properly preserved, at 1 Deg. C and intact. These Samples received an Accutest job number of MC39548. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix: AQ **Batch ID:** MSV1469

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC39558-4MS, MC39558-4MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- MC39558-4MS/MSD Recovery(s) for Trichloroethene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- MC39548-1, 2, 3, 4 for Methylene chloride, 1,1,2,2-Tetrachloroethane: Continuing Calibration outside of acceptance criteria. Reporting Limit response verified by low-level standard.
- MC39558-4MS for 1,1-Dichloroethane, 1,1,2,2-Tetrachloroethane are outside DoD control limits, but within in-house control limits.
- MC39558-4MSD for 1,1-Dichloroethane, Methylene chloride, 1,1,2,2-Tetrachloroethane, 1,1,2-Trichloroethane are outside DoD control limits, but within in-house control limits.

Volatiles by GC By Method VRSK 175

Matrix: AQ **Batch ID:** GBA1505

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC39638-3DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP24785

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39372-1FSDL, MC39533-3FMS, MC39533-3FMSD, MC39372-1FSDL were used as the QC samples for metals.
- MP24785-MS/MSD Recovery(s) for Manganese are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.
- RPD(s) for Serial Dilution for Aluminum, Cadmium, Chromium, Copper, Zinc are outside control limits for sample MP24785-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Metals By Method SW846 6020A

Matrix: AQ	**Batch ID:** MP24785A

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39372-1FSDL, MC39533-3FMSD were used as the QC samples for metals.
- MP24785A-MS/MSD for Arsenic: Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.

Metals By Method SW846 7470A

Matrix: AQ	**Batch ID:** MP24781

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3FMS, MC39533-3FMSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ	**Batch ID:** N:GP90193

- MC39548-1, 2, 3, 4 for Sulfate: Analysis performed at Accutest Laboratories, Dayton, NJ.

Wet Chemistry By Method EPA 353.2

Matrix: AQ	**Batch ID:** GP19282

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39435-6DUP, MC39435-6MS were used as the QC samples for Nitrogen, Nitrate + Nitrite.

Matrix: AQ	**Batch ID:** GP19320

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3DUP, MC39533-3MS were used as the QC samples for Nitrogen, Nitrate + Nitrite.

Matrix: AQ	**Batch ID:** R36831

- MC39548-1 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R36876

- MC39548-2 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R36877

- MC39548-3 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R36878

- MC39548-4 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Wet Chemistry By Method SM 21 4500 NO2 B

Matrix: AQ	Batch ID: GP19276

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3DUP, MC39533-3MS were used as the QC samples for Nitrogen, Nitrite.

Wet Chemistry By Method SM21 2320B

Matrix: AQ	Batch ID: GN51055

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39548-1DUP, MC39548-1MS were used as the QC samples for Alkalinity, Total as $CaCO_3$.

Wet Chemistry By Method SM21 4500 S F

Matrix: AQ	Batch ID: GN51053

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-2DUP, MC39533-2MS were used as the QC samples for Sulfide.

Wet Chemistry By Method SM21 5310 B

Matrix: AQ	Batch ID: GP19293

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39435-6MS, MC39435-6MSD were used as the QC samples for Total Organic Carbon.

Matrix: AQ	Batch ID: GP19317

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3MS, MC39533-3MSD were used as the QC samples for Total Organic Carbon.

The Accutest Laboratories of New England certifies that all analysis were performed within method specification. It is further recommended that this report to be used in its entirety.The Accutest Laboratories of NE, Laboratory Director or assignee as verified by the signature on the cover page has authorized the release of this report(MC39548).

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: Accutest Labs of New England, Inc. **Job No** MC39548

Site: HSMAW: Fort Devens, AOC50, Devens, MA **Report Date** 6/30/2015 2:45:45 PM

On 06/24/2015, 4 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 1.2 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of MC39548 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ **Batch ID:** GP90193

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3DUP, MC39533-3MS were used as the QC samples for Sulfate.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: MC39548 **Client:** H&S **Immediate Client Services Action Required:** No

Date / Time Received: 6/23/2015 12:30:00 PM **Delivery Method:**

Project: FT DEVENS AOC 50 **No. Coolers:** 1 **Airbill #'s:**

Cooler Security

	Y	N
1. Custody Seals Present:	☑	☐
2. Custody Seals Intact:	☑	☐
3. COC Present:	☑	☐
4. Smpl Dates/Time OK	☐	☑

Cooler Temperature

	Y	N
1. Temp criteria achieved:	☑	☐
2. Cooler temp verification:	Glass Thermometer	
3. Cooler media:	Ice (Bag)	

Quality Control Preservation

	Y	N	N/A
1. Trip Blank present / cooler:	☐	☑	
2. Trip Blank listed on COC:	☐	☑	
3. Samples preserved properly:	☑	☐	
4. VOCs headspace free:	☑	☐	☐

Sample Integrity - Documentation

	Y	N
1. Sample labels present on bottles:	☑	☐
2. Container labeling complete:	☑	☐
3. Sample container label / COC agree:	☑	☐

Sample Integrity - Condition

	Y	N
1. Sample rec'd within HT:	☑	☐
2. All containers accounted for:	☑	☐
3. Condition of sample:	Broken / Leaking	

Sample Integrity - Instructions

	Y	N	N/A
1. Analysis requested is clear:	☑	☐	
2. Bottles received for unspecified tests	☐	☑	
3. Sufficient volume rec'd for analysis:	☐	☑	
4. Compositing instructions clear:	☐	☐	☑
5. Filtering instructions clear:	☑	☐	☐

Comments

Collection date of 6/23/15 added to COC per sample labels.
-2 we received a few bottles with the caps on, but not tight.
-2 the 250ml bottle with H2SO4 had the cap loose, and has half the volume remaining.
-2 the 250ml bottle with NAOH+ZINC had the cap loose, and has very little volume left inside.
-2 2 of the 3 vials received for TOC were received empty.. 1 remains for analysis.

(a) Outside control limits due to high level in sample relative to spike amount.
(b) Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.
(c) Spike duplicate recovery indicates possible matrix interference and/or sample nonhomogeneity.
(d) Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client:	H&S Environmental	**Job No**	MC39667
Site:	Fort Devens, AOC50, Devens, MA	**Report Date**	7/13/2015 9:31:04 AM

6 Sample(s) were collected on 06/26/2015 and were received at Accutest on 06/26/2015 properly preserved, at 0.7 Deg. C and intact. These Samples received an Accutest job number of MC39667. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix AQ **Batch ID:** MSH2428

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.

Volatiles by GC By Method VRSK 175

Matrix AQ **Batch ID:** GBA1506

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39699-1DUP were used as the QC samples indicated.

Metals By Method SW846 6010C

Matrix AQ **Batch ID:** MP24800

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39713-5FMS, MC39713-5FMSD, MC39713-5FSDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Aluminum, Iron, Nickel, Zinc are outside control limits for sample MP24800-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Metals By Method SW846 6020A

Matrix AQ **Batch ID:** MP24800A

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39713-5FMS, MC39713-5FMSD, MC39713-5FSDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP24800A-SD1. Serial Dilution RPD acceptable due to low duplicate and sample concentrations.

Metals By Method SW846 7470A

Matrix AQ	Batch ID: MP24791

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39667-1FMS, MC39667-1FMSD were used as the QC samples for metals.

Matrix AQ	Batch ID: MP24797

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39713-5MS, MC39713-5MSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix AQ	Batch ID: N:GP90330

- Sulfate: Analysis performed at Accutest Laboratories, Dayton, NJ.

Wet Chemistry By Method EPA 353.2

Matrix AQ	Batch ID: GP19320

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3DUP, MC39533-3MS were used as the QC samples for Nitrogen, Nitrate + Nitrite.

Matrix AQ	Batch ID: R36879

- MC39667-5 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix AQ	Batch ID: R36880

- MC39667-6 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Wet Chemistry By Method SM 21 4500 NO2 B

Matrix AQ	Batch ID: GP19296

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39667-6DUP, MC39667-6MS were used as the QC samples for Nitrogen, Nitrite.

Wet Chemistry By Method SM21 2320B

Matrix AQ	Batch ID: GN51055

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39548-1DUP, MC39548-1MS were used as the QC samples for Alkalinity, Total as CaCO3.

Wet Chemistry By Method SM21 4500 S F

Matrix	AQ	Batch ID:	GN51095

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39667-5DUP, MC39667-5MS were used as the QC samples for Sulfide.

Wet Chemistry By Method SM21 5310 B

Matrix	AQ	Batch ID:	GP19317

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC39533-3MS, MC39533-3MSD were used as the QC samples for Total Organic Carbon.

The Accutest Laboratories of New England certifies that all analysis were performed within method specification. It is further recommended that this report to be used in its entirety.The Accutest Laboratories of NE, Laboratory Director or assignee as verified by the signature on the cover page has authorized the release of this report(MC39667).

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: Accutest Labs of New England, Inc. **Job No** MC39667

Site: HSMAW: Fort Devens, AOC50, Devens, MA **Report Date** 7/8/2015 8:49:19 AM

On 06/30/2015, 2 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 1.9 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of MC39667 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ **Batch ID:** GP90330

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB98233-11DUP, JB98233-11MS were used as the QC samples for Sulfate.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: MC39667 **Client:** H&S **Immediate Client Services Action Required:** Yes

Date / Time Received: 6/26/2015 3:45:00 PM **Delivery Method:**

Project: FT DEVENS AOC50 **No. Coolers:** 1 **Airbill #'s:**

Cooler Security

	Y	N
1. Custody Seals Present:	☑	☐
2. Custody Seals Intact:	☑	☐
3. COC Present:	☑	☐
4. Smpl Dates/Time OK	☑	☐

Cooler Temperature

	Y	N
1. Temp criteria achieved:	☑	☐
2. Cooler temp verification:	Glass Thermometer	
3. Cooler media:	Ice (Bag)	

Quality Control Preservation

	Y	N	N/A
1. Trip Blank present / cooler:	☐	☑	
2. Trip Blank listed on COC:	☐	☑	
3. Samples preserved properly:	☑	☐	
4. VOCs headspace free:	☑	☐	☐

Sample Integrity - Documentation

	Y	N
1. Sample labels present on bottles:	☑	☐
2. Container labeling complete:	☑	☐
3. Sample container label / COC agree:	☑	☐

Sample Integrity - Condition

	Y	N
1. Sample rec'd within HT:	☑	☐
2. All containers accounted for:	☑	☐
3. Condition of sample:	Intact	

Sample Integrity - Instructions

	Y	N	N/A
1. Analysis requested is clear:	☑	☐	
2. Bottles received for unspecified tests	☐	☑	
3. Sufficient volume rec'd for analysis:	☑	☐	
4. Compositing instructions clear:	☐	☐	☑
5. Filtering instructions clear:	☑	☐	☐

Comments

-5, -6 No NAOH + ZN ACE. Bottles recd. For Sufide analysis.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client:	H&S Environmental	**Job No**	MC41332
Site:	Fort Devens, AOC50, Devens, MA	**Report Date**	9/23/2015 7:38:58 AM

4 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were collected on 09/09/2015 and were received at Accutest on 09/09/2015 properly preserved, at 0.8 Deg. C and intact. These Samples received an Accutest job number of MC41332. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix: AQ **Batch ID:** MSG5458

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC41330-2MS, MC41330-2MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- MC41330-2MS Recovery(s) for Styrene are outside control limits. Outside control limits due to possible matrix interference. Refer to Blank Spike.
- MC41332-2, 3: Elevated RL due to dilution required for matrix interference.
- MC41330-2MS/MSD Recovery(s) for 1,3,5-Trimethylbenzene and MC41330-2MSD Recovery(s) for Styrene are outside DoD control limits, but within in-house control limits.

Volatiles by GC By Method VRSK 175

Matrix: AQ **Batch ID:** GBA1525

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC41332-1DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP25142

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41432-2FMS, MC41432-2FMSD, MC41432-2FSDL were used as the QC samples for metals.
- MS/MSD Recovery(s) for Manganese are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.
- RPD(s) for Serial Dilution for Copper, Nickel, Silver, Vanadium, Zinc are outside control limits for sample MP25142-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- MS/MSD for Sodium, Iron: Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.

Metals By Method SW846 6020A

Matrix: AQ	**Batch ID:** MP25142A

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41432-2FMS, MC41432-2FMSD, MC41432-2FSDL were used as the QC samples for metals.

Metals By Method SW846 7470A

Matrix: AQ	**Batch ID:** MP25123

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41301-3MS, MC41301-3MSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ	**Batch ID:** N:GP92019

- MC41332-1, 2, 3, 4 for Sulfate: Analysis performed at Accutest Laboratories, Dayton, NJ.

Wet Chemistry By Method EPA 353.2

Matrix: AQ	**Batch ID:** GP19562

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41374-1DUP, MC41374-1MS were used as the QC samples for Nitrogen, Nitrate + Nitrite.
- Matrix Spike Recovery(s) for Nitrogen, Nitrate + Nitrite are outside control limits. Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.Refer to spike blank.

Matrix: AQ	**Batch ID:** R37211

- MC41332-1 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R37212

- MC41332-2 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R37213

- MC41332-4 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R37214

- MC41332-3 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Wet Chemistry By Method SM 21 4500 NO2 B

Matrix: AQ	**Batch ID:** GP19545

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41332-1DUP, MC41332-1MS were used as the QC samples for Nitrogen, Nitrite.

Wet Chemistry By Method SM21 4500 S F

Matrix: AQ	**Batch ID:** GN51767

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41332-1DUP, MC41332-1MS were used as the QC samples for Sulfide.

Wet Chemistry By Method SW846 9060

Matrix: AQ	**Batch ID:** GP19577

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41332-1MS, MC41332-1MSD were used as the QC samples for Total Organic Carbon.

The Accutest Laboratories of New England certifies that all analysis were performed within method specification. It is further recommended that this report to be used in its entirety.The Accutest Laboratories of NE, Laboratory Director or assignee as verified by the signature on the cover page has authorized the release of this report(MC41332).

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	Accutest Labs of New England, Inc.	**Job No**	MC41332
Site:	HSMAW: Fort Devens, AOC50, Devens, MA	**Report Date**	9/16/2015 12:50:09 P

On 09/12/2015, 4 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 3.8 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of MC41332 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ **Batch ID:** GP92019

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41332-1MS, MC41332-1DUP were used as the QC samples for Sulfate.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: MC41332 **Client:** H&S **Project:** USACE DEVENS AOC 50

Date / Time Received: 9/9/2015 4:45:00 PM **Delivery Method:** **Airbill #'s:**

Cooler Temps (Initial/Adjusted): #1: (0.8/0.8);

Cooler Security	Y	N		Y	N
1. Custody Seals Present:	✔	☐	3. COC Present:	✔	☐
2. Custody Seals Intact:	✔	☐	4. Smpl Dates/Time OK	✔	☐

Cooler Temperature	Y	N
1. Temp criteria achieved:	✔	☐
2. Thermometer ID:	G1;	
3. Cooler media:	Ice (Bag)	
4. No. Coolers:	1	

Quality Control_Preservation	Y	N	N/A
1. Trip Blank present / cooler:	☐	✔	☐
2. Trip Blank listed on COC:	☐	✔	☐
3. Samples preserved properly:	✔	☐	
4. VOCs headspace free:	✔	☐	☐

Sample Integrity - Documentation	Y	N
1. Sample labels present on bottles:	✔	☐
2. Container labeling complete:	✔	☐
3. Sample container label / COC agree:	✔	☐

Sample Integrity - Condition	Y	N
1. Sample recvd within HT:	✔	☐
2. All containers accounted for:	✔	☐
3. Condition of sample:	Intact	

Sample Integrity - Instructions	Y	N	N/A
1. Analysis requested is clear:	✔	☐	
2. Bottles received for unspecified tests	☐	✔	
3. Sufficient volume recvd for analysis:	✔	☐	
4. Compositing instructions clear:	☐	☐	✔
5. Filtering instructions clear:	☐	☐	✔

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: H&S Environmental **Job No** MC41374

Site: Fort Devens, AOC50, Devens, MA **Report Date** 9/24/2015 1:18:19 PM

7 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were collected on 09/10/2015 and were received at Accutest on 09/10/2015 properly preserved, at 3 Deg. C and intact. These Samples received an Accutest job number of MC41374. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix: AQ **Batch ID:** MSU1322

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- MSU1322-BSD, RPD(s) for MSU1322-BSD for Vinyl Acetate: Outside control limits. Associated samples are non-detect for this compound.

Volatiles by GC By Method VRSK 175

Matrix: AQ **Batch ID:** GBA1525

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC41332-1DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP25153

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41374-2FMS, MC41374-2FMSD, MC41374-2FSDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Copper, Nickel, Vanadium are outside control limits for sample MP25153-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- MC41374-2F for Manganese, Sodium: Matrix spike duplicate recovery outside of the control limit. J-flag applied.
- MP25153-S1 for Iron: Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
- MP25153-SD1 for Zinc: Serial Dilution RPD acceptable due to low duplicate and sample concentrations.
- MC41374-2F for Iron: Matrix spike recovery outside of the control limit. J-flag applied.
- MP25153-S2 for Manganese, Sodium: Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.

Metals By Method SW846 6020A

Matrix: AQ	**Batch ID:** MP25153A

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41374-2FMS, MC41374-2FMSD, MC41374-2FSDL were used as the QC samples for metals.

Metals By Method SW846 7470A

Matrix: AQ	**Batch ID:** MP25144

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41374-1FMS, MC41374-1FMSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ	**Batch ID:** N:GP92019

- Analysis performed at Accutest Laboratories, Dayton, NJ.

Wet Chemistry By Method EPA 353.2

Matrix: AQ	**Batch ID:** GP19562

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41374-1DUP, MC41374-1MS were used as the QC samples for Nitrogen, Nitrate + Nitrite.
- Matrix Spike Recovery(s) for Nitrogen, Nitrate + Nitrite are outside control limits. Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.Refer to spike blank.

Matrix: AQ	**Batch ID:** GP19563

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41414-8DUP, MC41414-8MS were used as the QC samples for Nitrogen, Nitrate + Nitrite.

Matrix: AQ	**Batch ID:** R37220

- MC41374-1 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R37221

- MC41374-2 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R37222

- MC41374-3 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R37223

- MC41374-5 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R37224

- MC41374-6 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R37225

- MC41374-7 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R37232

- MC41374-4 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Wet Chemistry By Method SM 21 4500 NO2 B

Matrix: AQ	**Batch ID:** GP19548

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41374-1DUP, MC41374-1MS were used as the QC samples for Nitrogen, Nitrite.

Wet Chemistry By Method SM21 4500 S F

Matrix: AQ	Batch ID: GN51767

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41332-1DUP, MC41332-1MS were used as the QC samples for Sulfide.

Matrix: AQ	Batch ID: GN51768

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41432-6DUP, MC41432-6MS were used as the QC samples for Sulfide.

Wet Chemistry By Method SW846 9060

Matrix: AQ	Batch ID: GP19577

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41332-1MS, MC41332-1MSD were used as the QC samples for Total Organic Carbon.

Matrix: AQ	Batch ID: GP19578

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41374-4MS, MC41374-4MSD were used as the QC samples for Total Organic Carbon.

The Accutest Laboratories of New England certifies that all analysis were performed within method specification. It is further recommended that this report to be used in its entirety.The Accutest Laboratories of NE, Laboratory Director or assignee as verified by the signature on the cover page has authorized the release of this report(MC41374).

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	Accutest Labs of New England, Inc.	**Job No**	MC41374
Site:	HSMAW: Fort Devens, AOC50, Devens, MA	**Report Date**	9/18/2015 12:15:07 P

On 09/12/2015, 7 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 3.8 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of MC41374 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ	**Batch ID:** GP92019

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41332-1MS, MC41332-1DUP were used as the QC samples for Sulfate.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: MC41374 **Client:** H&S **Project:** USACE DEVENS

Date / Time Received: 9/10/2015 5:50:00 PM **Delivery Method:** **Airbill #'s:**

Cooler Temps (Initial/Adjusted): #1: (3/3);

Cooler Security

	Y	N
1. Custody Seals Present:	☑	☐
2. Custody Seals Intact:	☑	☐
3. COC Present:	☑	☐
4. Smpl Dates/Time OK	☑	☐

Cooler Temperature

	Y	N
1. Temp criteria achieved:	☑	☐
2. Thermometer ID:	G1;	
3. Cooler media:	Ice (Bag)	
4. No. Coolers:	1	

Quality Control_Preservation

	Y	N	N/A
1. Trip Blank present / cooler:	☐	☑	☐
2. Trip Blank listed on COC:	☐	☑	☐
3. Samples preserved properly:	☑	☐	
4. VOCs headspace free:	☑	☐	☐

Sample Integrity - Documentation

	Y	N
1. Sample labels present on bottles:	☑	☐
2. Container labeling complete:	☑	☐
3. Sample container label / COC agree:	☑	☐

Sample Integrity - Condition

	Y	N
1. Sample recvd within HT:	☑	☐
2. All containers accounted for:	☑	☐
3. Condition of sample:	Intact	

Sample Integrity - Instructions

	Y	N	N/A
1. Analysis requested is clear:	☑	☐	
2. Bottles received for unspecified tests	☐	☑	
3. Sufficient volume recvd for analysis:	☑	☐	
4. Compositing instructions clear:	☐	☐	☑
5. Filtering instructions clear:	☐	☐	☑

(a) Outside control limits. Associated samples are non-detect for this compound.
(b) Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
(c) Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: H&S Environmental **Job No** MC41403

Site: Fort Devens, AOC50, Devens, MA **Report Date** 9/23/2015 4:26:22 PM

3 Sample(s), 1 Trip Blank(s) and 0 Field Blank(s) were collected on 09/11/2015 and were received at Accutest on 09/11/2015 properly preserved, at 1.6 Deg. C and intact. These Samples received an Accutest job number of MC41403. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix: AQ **Batch ID:** MSU1322

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- MSU1322-BSD, RPD(s) for MSU1322-BSD for Vinyl Acetate: Outside control limits. Associated samples are non-detect for this compound.

Volatiles by GC By Method VRSK 175

Matrix: AQ **Batch ID:** GBA1525

- All samples were analyzed within the recommended method holding time.
- Sample(s) MC41332-1DUP were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP25153

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41374-2FMS, MC41374-2FMSD, MC41374-2FSDL were used as the QC samples for metals.
- RPD(s) for Serial Dilution for Copper, Nickel, Vanadium are outside control limits for sample MP25153-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- MP25153-SD1 for Zinc: Serial Dilution RPD acceptable due to low duplicate and sample concentrations.
- MP25153-S1 for Iron: Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
- MP25153-S2 for Manganese, Sodium: Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.

Metals By Method SW846 6020A

Matrix: AQ **Batch ID:** MP25153A

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41374-2FMS, MC41374-2FMSD, MC41374-2FSDL were used as the QC samples for metals.

Metals By Method SW846 7470A

Matrix: AQ	**Batch ID:** MP25144

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41374-1FMS, MC41374-1FMSD were used as the QC samples for metals.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ	**Batch ID:** N:GP92069

- Analysis performed at Accutest Laboratories, Dayton, NJ.

Wet Chemistry By Method EPA 353.2

Matrix: AQ	**Batch ID:** GP19563

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41414-8DUP, MC41414-8MS were used as the QC samples for Nitrogen, Nitrate + Nitrite.

Matrix: AQ	**Batch ID:** R37226

- MC41403-1 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R37227

- MC41403-2 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ	**Batch ID:** R37228

- MC41403-3 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Wet Chemistry By Method SM 21 4500 NO2 B

Matrix: AQ	**Batch ID:** GP19548

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41374-1DUP, MC41374-1MS were used as the QC samples for Nitrogen, Nitrite.

Wet Chemistry By Method SM21 4500 S F

Matrix: AQ	**Batch ID:** GN51767

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41332-1DUP, MC41332-1MS were used as the QC samples for Sulfide.

Wet Chemistry By Method SW846 9060

Matrix: AQ	**Batch ID:** GP19577

- All samples were distilled within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) MC41332-1MS, MC41332-1MSD were used as the QC samples for Total Organic Carbon.

The Accutest Laboratories of New England certifies that all analysis were performed within method specification. It is further recommended that this report to be used in its entirety.The Accutest Laboratories of NE, Laboratory Director or assignee as verified by the signature on the cover page has authorized the release of this report(MC41403).

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: Accutest Labs of New England, Inc. **Job No** MC41403

Site: HSMAW: Fort Devens, AOC50, Devens, MA **Report Date** 9/17/2015 12:15:02 P

On 09/12/2015, 3 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a maximum corrected temperature of 3.8 C. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of MC41403 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Wet Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ **Batch ID:** GP92069

- All samples were prepared within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: MC41403 **Client:** H&S ENVIRONMENTAL **Project:** USACE DEVENS AOC 50

Date / Time Received: 9/11/2015 4:00:00 PM **Delivery Method:** **Airbill #'s:**

Cooler Temps (Initial/Adjusted): #1: (1.6/1.6);

Cooler Security

	Y	N
1. Custody Seals Present:	☑	☐
2. Custody Seals Intact:	☑	☐
3. COC Present:	☑	☐
4. Smpl Dates/Time OK	☑	☐

Cooler Temperature

	Y	N
1. Temp criteria achieved:	☑	☐
2. Thermometer ID:	G1;	
3. Cooler media:	Ice (Bag)	
4. No. Coolers:	1	

Quality Control_Preservation

	Y	N	N/A
1. Trip Blank present / cooler:	☑	☐	☐
2. Trip Blank listed on COC:	☑	☐	☐
3. Samples preserved properly:	☑	☐	
4. VOCs headspace free:	☑	☐	☐

Sample Integrity - Documentation

	Y	N
1. Sample labels present on bottles:	☑	☐
2. Container labeling complete:	☑	☐
3. Sample container label / COC agree:	☑	☐

Sample Integrity - Condition

	Y	N
1. Sample recvd within HT:	☑	☐
2. All containers accounted for:	☑	☐
3. Condition of sample:	Intact	

Sample Integrity - Instructions

	Y	N	N/A
1. Analysis requested is clear:	☑	☐	
2. Bottles received for unspecified tests	☐	☑	
3. Sufficient volume recvd for analysis:	☑	☐	
4. Compositing instructions clear:	☐	☐	☑
5. Filtering instructions clear:	☐	☐	☑

(a) Outside control limits. Associated samples are non-detect for this compound.
(b) Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
(c) Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.
