**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Penetration of Landfill Liner  
 Stockpiling Excess Soils

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges. Moretrench did not conduct on-site QC testing of slurry as no additional slurry was added to the trench during the day and excavation activities out to final station 8+50 were completed by 1200.

Soil-Bentonite Backfill:

|         |                |
|---------|----------------|
| Test    | Time Conducted |
| Slump   | 1300 & 1330    |
| Density | 1318 & 1335    |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content. AMEC conducted Materials Fines Content on backfill mix batches 36 through 38. Average Fines content of the three batches was 48%.

Completed trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 091212-01 through 091212-04.

AMEC: Geotechnical Engineer provided oversight of on-site QC testing performed by Moretrench and trench exvcavation activities. Geotechnical Engineer made all final determination of trench depths and if refusal criteria had been met at each 10 foot station. Geotechnical Engineer completed on site Fine Content % of backfill mixes.

Moretrench: Continued backfill mixing with excavator. Completed excavation of trench from 8+20 to 8+50 by 1200. Backfilled trench with 1 1/2 batches of backfill. Backfill complete up to station 7+60. Backfill quantities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing. Isolated Slurry into Tank 2. Began cleaning Tank 1 and continued cleaning Tank 2.

Final Trench Depths at 10 foot stations during the day:

|                                                                                     |  |                                                                     |  |

| 8+50    | 39.4'              |  |

Materials Brought on Site:

No new material brought on site during the day.

Equipment Brought on Site:

No additional equipment brought on-site during the day.

Additional Notes:

Randy LeCuyer (USACE Construction Rep.) on site during the morning. Given a site walk-through and updated on progress of the project. Dissussed site restoration plan that was requested by the USACE Ecologist and determined that the entire area to be restored was a flat dry area and the warmseason grass mix requested by the USACE Ecologist would be used. In addition no top soil/loam would be used. The sand soil from the existing stockpile on site would be used instead removing all rocks greater than 6 inches. Further details to be discussed in the Preparatory Meeting for DFW: Site Restoration.

No other major comments or concerns noted.

MassDEP on site during the afternoon. Given a site walk-through and updated on progress of the project.

No major comments or concerns noted.

**Verbal Instructions given by Government:**

No verbal instructions given by the government during the day.

**Safety Inspection / Safety Meetings:**

Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviuewed prior to start of work activties.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
       Stockpiling Excess Soils  
       Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Moretrench and AMEC conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing.  
 AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges.  
 Soil-Bentonite Backfill:

|         |                   |
|---------|-------------------|
| Test    | Time Conducted    |
| Slump   | 0900, 1130 & 1413 |
| Density | 0920, 1135 & 1435 |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content.  
 AMEC conducted Materials Fines Content on backfill mix batches 39 and 40. Average Fines content of the two batches was 48%.

Completed trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 091312-01 through 091312-06.

AMEC: Geotechnical Engineer provided overisght of the completion of trench backfilling activties and completed on site Fine Content % of backfill mixes.

Moretrench: Continued backfill mixing with excavator. Backfilled trench with 2 1/2 batches of backfill. Backfill complete up to station 8+50. Backfill complete for entire barrier wall. Backfill quantities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing for backfill mixes. Slurry Tanks 1&3 completely cleaned. Broke down slurry hoses along the side of the former trenching area. Removed circulation pumps from all tanks and cleaned and stored on pallets for removal from site. Began disassembling electric boxes from side of Tank 3.

Materials Brought on Site:

No new material brought on site during the day.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Stockpiling Excess Soils  
 Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Preparatory Meeting held for D.F.W: Site Restoration / Demobilization.

One sample collected of Low Permability Borrow for off-site anaylsis of hydraulic conductivity.  
 This material will be used to construct the cap of the soil-bentonite wall.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 091412-01 through 091412-05.

Moretrench: Completed the cleaning of Slurry Tanks 2. Cleaned out Slurry Hoses. Began cutting 4 inch HDPE piping from along the side of the former trenching area. Continued cleaning of circulation pumps from all tanks and storing on pallets for removal from site. Continued disassembling electric boxes from side of Tank 3. Cleaned the CAT 374 excavator and long-stick for removal from site the following week. Spread out materail from along side of the former trench to dry out the excess slurry with the dozer and loader. Started to remove contain berms with the CAT 329 excavator from station 0+00 to approximately 3+00.

Materials Brought on Site:

No new material brought on site during the day.

Equipment Brought on Site:

No additional equipment brought on-site during the day.

Additional Notes:

No other major comments or conerns noted.

**Verbal Instructions given by Government:**  
 No verbal instructions given by the government excpet for those noted during the Preparatory Meeting for D.F.W: Site Restoration / Demobilization.

All instructions noted in 3 Phases Inspection section of RMS.

**Safety Inspection / Safety Meetings:**

| <b>General Comments:</b><br>Work Completed During the Day:<br><br>Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 091712-01 through 091712-06.<br><br>Moretrench: Cleaned and disassembled slurry plant and diesel pump. Completed disassembly of electric boxes. Prepared hoses, fittings and junction boxes for removal from site. Continued cutting 4 inch HDPE pipe. Continued to spread out materail from along side of the former trench to dry out the excess slurry with the dozer and loader. Began grading first 400 feet of barrier wall area for proper drainage. Moved trench spoils with trash to stockpiling area.<br><br>Materials Brought on Site:<br><br>No new material brought on site during the day.<br><br>Equipment Brought on Site:<br><br>No additional equipment brought on-site during the day.<br><br>Additional Notes:<br><br>No other major comments or conerns noted. |  |                                                                                                      |             |

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Stockpiling Excess Soils  
 Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Soverign conducted QC inspections of grading activites.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 091812-01 through 091812-06.

Moretrench: Loaded Moretrench trailer with slurry plant operations equipment for removal from site during the day ( slurry plant, diesel pump, generator, hoses, fittings, submersible pumps, elctrical boxes, fusing machine). Installed silt fence around trech spoil piles. Continued to spread out materail from along side of the former trench to dry out the excess slurry with the dozer and loader. Conitued grading first 400 feet of barrier wall area for proper drainage. Broke apart berms in laydown area with CAT 329. Mixed 1 batch of low permability backfill for cap installation.

Materials Brought on Site:

3 rolls (12 X 350 feet) of Marafi Woven Geotextile Fabric

Equipment Brought on Site:

No additional equipment brought on-site during the day.

Additional Notes:

No other major comments or conerns noted.

**Verbal Instructions given by Government:**  
 No verbal instructions given by the government during the day.

**Safety Inspection / Safety Meetings:**  
 Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviued prior to start of work activties.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Stockpiling Excess Soils  
 Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Sovereign conducted QC inspections photographic documentation of barrier wall capping activities.

Barrier wall capping activities consisted of excavting to a depth of at least 2.5 feet below grade and at least 2 feet wide. Geotextile woven fabric placed in the trench and pinned down on sides and top every 20 feet and more often as needed. A 36 inch over-lab was used on seams. Following fabric placement 2 feet of low permability backfill was place atop of the fabric in the trench in 1 foot lifts. Each lift was compacted with the excavator bucket. At least 6 inches of sandy soil was placed atop the low permability backfill.

Backfill used was a 50/50 mix of fines/trench cutting and bentonite.

Backfill being excavated from the trench was stockpiled for drying purposes and to be used at a later time for backfill in capping activities.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench. Conducted photo documentation of grading and barrier wall cap installation. Photograph IDs: 092012-01 through 092012-20

Moretrench: Milton CAT and Central Mass Crane on site and disassembled the long-stick and boom of the 375 CAT excavator. Long-stick and boom loaded onto a trailer and removed from site. Continued to spread out material to dry out excess slurry and soil with a dozer. Continued work on re-building of drainage swale. Completed barrier wall cap from station 0+00 to station 2+40 with use of CAT 329 excavator and loader.

Materials Brought on Site:

No new material brought on site during the day.

Equipment Brought on Site:

New bucket with teeth for use on CAT 329 Excavator.

Additional Notes:

No other major comments or concerns noted.

**Verbal Instructions given by Government:**  
 No verbal instructions given by the government during the day.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Stockpiling Excess Soils  
 Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Soverign conducted QC inspections of barrier wall capping activites.

Barrier wall capping activites consisted of excavting to a depth of at least 2.5 feet below grade and at least 2 feet wide. Geotextile woven fabric placed in the trench and pinned down on sides and top every 20 feet and more often as needed. A 36 inch over-lab was used on seams. Following fabric placement 2 feet of low permability backfill was place atop of the fabric in the trench in 1 foot lifts. Each lift was compacted with the excavator bucket. At least 6 inches of sandy soil was placed atop the low permability backfill.

Backfill used was a 50/50 mix of fines/trench cutting and bentonite.

Backfill being excavated from the trench was stockpiled for drying purposes and to be used at a later time for backfill in capping activities.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench.

Moretrench: Continued to spread out material to dry out excess slurry and soil with a dozer. Completed re-building of drainage swale with exsisting stone on site. Completed barrier wall cap from station 2+40 to station 3+00 with use of CAT 329 excavator and loader. Continued finish grading. Miscellaneous site clean-up. Mixed a batch of low permability cap backfill. Bentonite to be added the following work day.

Materials Brought on Site:

No new material brought on site during the day.

Equipment Brought on Site:

No additional equipment brought on site during the day.

Additional Notes:

No other major comments or conerns noted.

**Verbal Instructions given by Government:**  
 No verbal instructions given by the government during the day.

**Safety Inspection / Safety Meetings:**

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Stockpiling Excess Soils  
 Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Soverign conducted QC inspections of barrier wall capping activities.

Barrier wall capping activities consisted of excavting to a depth of at least 2.5 feet below grade and at least 2 feet wide. Geotextile woven fabric placed in the trench and pinned down on sides and top every 20 feet and more often as needed. A 36 inch over-lab was used on seams. Following fabric placement 2 feet of low permability backfill was place atop of the fabric in the trench in 1 foot lifts. Each lift was compacted with the excavator bucket. At least 6 inches of sandy soil was placed atop the low permability backfill.

Backfill used was a 50/50 mix of fines/trench cutting and bentonite.

Backfill being excavated from the trench was stockpiled for drying purposes and to be used at a later time for backfill in capping activities.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench. Conduted photo documentation of capping activities. Photo IDs: 092412-01 through 092412-09

Moretrench: Continued to spread out material to dry out excess slurry and soil with a dozer. Completed barrier wall cap from station 3+00 to station 4+00 with use of CAT 329 excavator and loader. Continued finish grading. Mixed bentonite into cap backfill material that was prepared the previous work day. Miscellaneous site clean-up. Mined into exsisting stockpile with CAT 329 to accumalte sandy soil to be used as top soil instead of loam as requested by the USACE. Removed containment berms from station 4+50 to station 7+00 back to exsisting grade.

CAT 374 Excavator loaded onto a trailer for off-site removal the following day by Milton CAT/CJ Hauling.  
 Counter-weight for the CAT 374 Excavator loaded onto a trailer and removed from site by Milton CAT/CJ Hauling.

Materials Brought on Site:

No new material brought on site during the day.

Equipment Brought on Site:

No additional equipment brought on site during the day.

Additional Notes:

No other major comments or conerns noted.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Stockpiling Excess Soils  
 Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Soverign conducted QC inspections of barrier wall capping activites.

Barrier wall capping activites consisted of excavting to a depth 2 feet below the landfill liner and at least 2 feet wide. Geotextile woven fabric placed in the trench and pinned down every 20 feet and more often as needed. At least a 24 inch over-lab was used on seams. Following fabric placement 2 feet of low permability backfill was place atop of the fabric in the trench in 1 foot lifts. Each lift was compacted with the excavator bucket. The low permability backfill will be covered with new landfill line followed by a foot of drainage sand and sandy top soil to grade. Landfill liner repair will be conducted following the completion of the entire 2 foot low permability cap.

Backfill used was a 50/50 mix of fines/trench cutting and bentonite.

Backfill being excavated from the trench was stockpiled for drying purposes and to be used at a later time for backfill in capping activities.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench. Conduted photo documentation of capping activities. Photo IDs: 092512-01 through 092512-05

Moretrench: Continued to spread out material to dry out excess slurry and soil with a dozer. Completed barrier wall cap from station 4+20 to station 5+30 with use of CAT 329 excavator and loader. Continued finish grading. . Miscellaneous site clean-up.

CAT 374 Excavator removed from site by Milton CAT/CJ Hauling.

Materials Brought on Site:

No new material brought on site during the day.

Equipment Brought on Site:

No additional equipment brought on site during the day.

Additional Notes:

No other major comments or conerns noted.

**Verbal Instructions given by Government:**

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Stockpiling Excess Soils  
 Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Soverign conducted QC inspections of barrier wall capping activities.

Barrier wall capping activites consisted of excavting to a depth 2 feet below the landfill liner and at least 2 feet wide. Geotextile woven fabric placed in the trench and pinned down every 20 feet and more often as needed. At least a 24 inch over-lab was used on seams. Following fabric placement 2 feet of low permability backfill was place atop of the fabric in the trench in 1 foot lifts. Each lift was compacted with the excavator bucket. The low permability backfill will be covered with new landfill line followed by a foot of drainage sand and sandy top soil to grade. Landfill liner repair will be conducted following the completion of the entire 2 foot low permability cap.

Backfill used was a 50/50 mix of fines/trench cutting and bentonite.

Backfill being excavated from the trench was stockpiled for drying purposes and to be used at a later time for backfill in capping activities.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench. Conduted photo documentation of capping activities. Photo IDs: 092612-01 through 092612-06

Moretrench: Continued to spread out material to dry out excess slurry and soil with a dozer. Completed barrier wall cap from station 5+30 to station 8+50 and 4+00 to 4+20 with use of CAT 329 excavator and loader. Enitre barrier wall cap has been completed. Barrier wall cap extend approximately five feet beyond station 8+50. Continued finish grading. . Miscellaneous site clean-up.

Materials Brought on Site:

No new material brought on site during the day.

Equipment Brought on Site:

No additional equipment brought on site during the day.

Additional Notes:

No other major comments or conerns noted.

**Verbal Instructions given by Government:**

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Stockpiling Excess Soils  
 Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Initial Inspection held for Site Restoration / Demobilization during the morning.

Soverign conducted QC inspections of landfill liner exposing activites conducted by Moretrench.  
 Only minimal damage to the landfill liner on each side of the barrier wall trench was observed.

Photo documentation conducted by Sovereign.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench. Conduted photo documentation of capping activities. Photo IDs: 092612-01 through 092612-06

Moretrench: Continued to spread out material to dry out excess slurry and soil with a dozer. Completed barrier wall cap from station 5+30 to station 8+50 and 4+00 to 4+20 with use of CAT 329 excavator and loader. Enitre barrier wall cap has been completed. Barrier wall cap extend approximately five feet beyond station 8+50. Continued finish grading. . Miscellaneous site clean-up. Began exposing landfill liner along trench alignment starting at station 8+50 and reaching station 7+00 by the end of the day.

Materials Brought on Site:

No new material brought on site during the day.

Equipment Brought on Site:

No additional equipment brought on site during the day.

Additional Notes:

Randy LeCuyer requested that the specification on the glue material to be used on the landfill liner repair be added to the landfill liner repair submittal.

**Verbal Instructions given by Government:**  
 Randy LeCuyer requested that the specification on the glue material to be used on the landfill liner repair be added to the landfill liner repair submittal.

Ellen Iorio (USACE Project) asked if another change to the seed mix could be made following correspondence from Mike Penkno (USACE

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Stockpiling Excess Soils  
 Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Sovereign conducted QC inspections of landfill liner exposing activites conducted by Moretrench.  
 Only minimal damage to the landfill liner on each side of the barrier wall trench was observed.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:  
  
 Sovereign: Provided project oversight and on-site QC of Moretrench.  
  
 Moretrench: Miscellaneous site clean-up. Continued to expose landfill liner along trench alignment starting at station 7+00 and reaching station 6+00 by the end of the day.  
  
 Materials Brought on Site:  
  
 No new material brought on site during the day.  
  
 Equipment Brought on Site:  
  
 No additional equipment brought on site during the day.  
  
 Additional Notes:  
  
 None

**Verbal Instructions given by Government:**  
 No verbal instructions given during the day.

**Safety Inspection / Safety Meetings:**  
 Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviued prior to start of work activties.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Stockpiling Excess Soils  
 Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Sovereign conducted QC inspections of landfill liner exposing activities conducted by Moretrench.  
 Only minimal damage to the landfill liner on each side of the barrier wall trench was observed.

Photo documentation conducted by Sovereign.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench. Conducted photo documentation of capping activities. Photo IDs: 100112-01 through 100112-03

Moretrench: Miscellaneous site clean-up. Continued to expose landfill liner along trench alignment starting at station 6+00 and reaching station 4+80 by the end of the day.

Materials Brought on Site:

No new material brought on site during the day.

Equipment Brought on Site:

No additional equipment brought on site during the day.

Additional Notes:

A sample of the soil from the soil/waste pile located in the staging area was collected by Sovereign during the day. The sample was submitted to Accutest Laboratories for analysis of all COMM-97 Landfill Table 1 requirements.

**Verbal Instructions given by Government:**  
 Through conversations with between Sovereign, USACE (Ellen Iorio), and BRAC Env. Coordinator (Robert Simone) Sovereign was instructed to collect a sample of the soil from the soil/waste pile located in the staging area and have it analyzed for all COMM-97 Landfill Table 1 requirements.

**Safety Inspection / Safety Meetings:**  
 Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's reviewed prior to start of work activities.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Stockpiling Excess Soils  
 Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Sovereign conducted QC inspections of landfill liner exposing activites conducted by Moretrench.  
 Only minimal damage to the landfill liner on each side of the barrier wall trench was observed.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:  
  
 Sovereign: Provided project oversight and on-site QC of Moretrench.  
  
 Moretrench: Miscellaneous site clean-up. Completed exposing landfill liner along trench alignment starting at station 4+80 to station 4+15 which is where the landfill liner started. Also began cleaning exposed parts of liner in prepartation for repairs to be made.  
  
 Materials Brought on Site:  
  
 No new material brought on site during the day.  
  
 Equipment Brought on Site:  
  
 No additional equipment brought on site during the day.  
  
 Additional Notes:  
  
 None.

**Verbal Instructions given by Government:**  
 Sovereign was given verbal approval by USACE (Zach Mothershed) to mobilize equipment necessary to complete the task of swifting the waste/soil pile to remove all trash less than 1 inch and create two sperate piles, one of trash and the other of soil.

**Safety Inspection / Safety Meetings:**  
 Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviuewed prior to start of work activties.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Repair of Landfill Liner  
       Stockpiling Excess Soils  
       Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Sovereign in conjunction with Terrafox (Liner Repair Contractor) Supervisor conducted QC inspections of landfill liner work being completed by the labor crew throughout the day. QC inspections included ensuring at least a 6 inch overlap was being used between the existing liner and the new liner material being used to make the repairs and that all repair seams were a minimum of 2 inches wide. QC inspections were also conducted to ensure proper cleaning methods and materials along with proper compression methods were being used to make repair seams using chemical fusion welds. QC samples of welds collected for off-site testing.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 There were no delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:  
  
 Sovereign: Provided project oversight and on-site QC of Moretrench. Photodocumentaion of landfill liner repair activities conducted during the day. Photo IDs: 100512-01through 100512-07  
  
 Moretrench: Started repair of landfill liner. Completed liner repair from station 4+15 to station 5+30 during the day.  
  
 Materials Brought on Site:  
  
 Chemical agent used from attaching new landfill liner material to existing liner material.  
  
 Equipment Brought on Site:  
  
 No additional equipment brought on site during the day.  
  
 Additional Notes:  
  
 None.

**Verbal Instructions given by Government:**  
 No verbal instruction given during the day by the government.

**Safety Inspection / Safety Meetings:**  
 Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviued prior to start of work activties.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Technical Drilling Services - Piezometer Installation Contractor.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Repair of Landfill Liner  
     Stockpiling Excess Soils  
     Site Restoration / Demobilization  
     Installation of Observation Wells (Piezometers)

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Preparatory Meeting held for DFW: Installation of Observation Wells (Piezometers)  
 Initial Inspection held for DFW: Repair of Landfill Liner

Sovereign in conjunction with Terrafox (Liner Repair Contractor) Supervisor conducted QC inspections of landfill liner work being completed by the labor crew throughout the day. QC inspections included ensuring at least a 6 inch overlap was being used between the existing liner and the new liner material being used to make the repairs and that all repair seams were a minimum of 2 inches wide. QC inspections were also conducted to ensure proper cleaning methods and materials along with proper compression methods were being used to make repair seams using chemical fusion welds. A final QC inspection of all repair areas was made prior to initiation of backfilling activities. QC samples of welds collect for off-site testing.

Sovereign conducted QC inspections of piezometer installation activities to ensure piezometers were installed to desired depths and in accordance with all plans.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 There were no delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench. Photodocumentation of landfill liner repair and backfilling activities conducted during the day. Photo IDs: 100912-01 through 100912-011. Sovereign Field Scientist completed soil descriptions of split spoon samples collected during piezometer installation activities.

Technical Drilling Services: Completed installation of piezometers PZ-12-08 through PZ-12-10. PZ-12-09 and PZ-12-10 were set to a depth of 30 feet below grade with a 10 foot screen. Depth to water at these two locations was approximately 20 feet below grade. PZ-12-07 was set to a depth of 32 feet below grade with a 10 foot screen. Depth to water at this location was approximately 24 feet below grade.

Moretrench: Completed liner repair from station 4+30 to station 8+50 during the day. Began backfilling area where landfill liner had been completed the prior day. One foot of drainage sand placed atop liner repair followed by sandy soils to grade. Began screening the waste/soil stockpile with loader.

Materials Brought on Site:  
 75 cys of drainage sand (W.J. Graves)

Equipment Brought on Site:

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Technical Drilling Services - Piezometer Installation Contractor.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Stockpiling Excess Soils  
 Site Restoration / Demobilization  
 Installation of Observation Wells (Piezometers)

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Sovereign conducted visual QC inspections of backfilling activities in the area of landfill liner repair.

Sovereign conducted QC inspections of piezometer installation activites to ensure piezometers were installed to desired depths and in accordance with all plans.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 There were no delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench. Photodocumentaion of backfilling and drilling activities conducted during the day. Photo IDs: 1001012-01through 101012-05. Sovereign Field Scientist completed soil descriptions of spilt spoon samples collected during piezometer installation activities.

Technical Drilling Services: Completed installation of piezometers PZ-12-05, PZ-12-06. and PZ-12-08. PZ-12-05 was set to a depth of 35 feet below grade with a 10 foot screen and PZ-12-06 were set to a depth of 36 feet below grade with a 10 foot screen. Depth to water at these two locations was approximately 20 feet below grade. PZ-12-08 was set to a depth of 32 feet below grade with a 10 foot screen. Depth to water at this location was approximately 24 feet below grade

Moretrench: Completed backfilling area where landfill liner repair had been completed the prior day. One foot of drainage sand placed atop liner repair followed by sandy soils to grade. Continured screening the waste/soil stockpile with loadle and screener.

Materials Brought on Site:

75 cys of drainage sand (W.J. Graves)

Equipment Brought on Site:

No new equipment brought on site.  
 Sovereign field trailer removed from site.

Additional Notes:

None.

**Verbal Instructions given by Government:**  
 No verbal instruction given during the day by the government.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Technical Drilling Services - Piezometer Installation Contractor.  
 Moretrench - Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Stockpiling Excess Soils  
 Site Restoration / Demobilization  
 Installation of Observation Wells (Piezometers)

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Sovereign conducted QC inspections of piezometer installation activites to ensure piezometers were installed to desired depths and in accordance with all plans.

A Follow-up inspection was completed for DFWs: Stockpiling of Soil Materials and Site Restoration / Demobilization. by Sovereign and USACE.

This inspections were also deemed as the Pre-Final Inspection for the project by Randy LeCuyer (USACE Construction Representative).

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 There were no delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench. Photodocumentaion of drilling activities conducted during the day. Photo IDs: 101112-01through 101112-04. Sovereign Field Scientist completed soil descriptions of spilt spoon samples collected during piezometer installation activities.

Technical Drilling Services: Completed installation of piezometers PZ-12-01 thorough PZ-12-04. Piezometers PZ-12-01 thorough PZ-12-04PZ-12-05 were set to a depth of 36 feet below grade with a 10 foot screen. Depth to water at all locations was approximately 20 feet below grade.

Moretrench: Loaded trailers and shipped Moretrench stoarage container, field office, fuel cell, and HDPE pipe off-site. Dumpster removed from site by Waste Management. Completed screening of waste/soil pile. Set up waste storage area. Installed plastic on the ground and surrounded area with silt fencing prior to placing the screened waste on top. Stockpiled screen clean soil and installed silt fence around the stockpile. Graded and repaired access road from gate to platform area. Scraped road surface and repaired pot holes.

Materials Brought on Site:

No new materials brought on site during the day.

Equipment Brought on Site:

No new equipment brought on site.

Additional Notes:

Bill Brandon (USEPA) on site during the afternoon to observe installation of piezometers PZ-12-01 and PZ-12-02.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of TDS  
 Technical Drilling Services - Piezometer Installation Contractor.

**Activities in Progress (List by Activity Number)**  
 DFW: Installation of Observation Wells (Piezometers)

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Sovereign conducted QC inspections of piezometer casing installations to ensure the methods used would be conducive to landfill liner repairs around each piezometer.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 There were no delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight of Technical Drilling Services during the installation of steel casings around piezometers located within the landfill liner.

Technical Drilling Services: Conducted the installation of steel casings around piezometers PZ-12-02 through PZ-12-06. Extra long steel casings were fabricated by TDS off-site. The extra long steel casings were need for those piezometers located within the landfill liner. The steel casing on each piezometer were installed to a depth of approximately one to one and a half feet below the landfill liner and cemented in. Area around these piezometers were not backfilled during the day as the landfill liner around each piezometer will have to be repaired at a future date.

Materials Brought on Site:

Five extra long steel casings and cement.

Equipment Brought on Site:

No new equipment brought on site.

Additional Notes:

None.

**Verbal Instructions given by Government:**  
 No verbal instruction given during the day by the government.

**Safety Inspection / Safety Meetings:**  
 Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviued prior to start of work activties.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Gatsby Grounds  
 Gatsby Grounds (sub-contractor to Moretrench) - Site Restoration Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Site Restoration / Demobilization

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Sovereign conducted QC inspections of site restoration activities being conducted during the day.  
  
 A Follow-Up Inspection was completed for DFW: Site Restoration / Demobilization.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 There were no delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight of Gatsby Grounds (sub-contractor to Moretrench) during site restoration activities. Conducted photo documentation of restoration activities. Photograph IDs: 102512-01 through 102512-05.

Gatsby Grounds (sub-contractor to Moretrench): Conducted site restoration activities including the completeion of rough grading with a bull dozer in the northern portion of disturbed area around the barrier wall. Final grading was completed in the southern and central portions of the disturbed area around the barrier wall with a soil conditioner and power-rake.

Materials Brought on Site:

None.

Equipment Brought on Site:

John Deer 450H Bull Dozer - Taken off-site at end of the day.  
 John Deer Skid Steerer with soil conditioner and power-rake attachments.

Additional Notes:

Randy LeCuyer (USACE Construction Representative) on-site during the afternoon to complete inspection of site restoration activities. No major comments or concerns noted during walk-through of the site. Jonathan Chaffee of Sovereign asked Randy LeCuyer if he still wanted seeding activities to be conducted the following day with a hurricane in the forecast for early the next week. Randy LeCuyer informed Sovereign to conduct seeding activites the following day. A final inspection for the project will be conducted following the completeion of all site restoration activities including the removal and disposal of stockpiled waste and concrete.

**Verbal Instructions given by Government:**  
 Jonathan Chaffee of Sovereign asked Randy LeCuyer if he still wanted seeding activities to be conducted the following day with a hurricane in the forecast for early the next week. Randy LeCuyer informed Sovereign to conduct seeding activites the following day.

No other verbal instruction given during the day by the government.

**Safety Inspection / Safety Meetings:**

All development activities were conducted in accordance with US EPA SOP #2044. All piezometers were purged using a wattera pump. Puring was conducted until turbidity readings of groundwater in each piezometer reached 50 NTUs or a two hour maxium purge time was reached. All development field data was collected and recored on Developement Data Forms.<br><br>WSP Sells (sub-contractor to Moretrench): Conducted a final survey of the limit of work area for the barrier wall construction. WSP shot topographic survey of the limit of work area that had been altered during construction and regraded during site restoration activities. WSP also shot location and elevation including Top of Casing elevation of the newly installed piezometers PZ-12-01 through PZ-12-10.<br><br>Materials Brought on Site:<br><br>None<br><br>Equipment Brought on Site:<br><br>Well Development Equipment: Water level meters, PID, Wattera Pumps, Generators, Tubing, Turbidity Meters, and YSI meters.<br><br>Additional Notes:<br><br>None.<br><br><b>Verbal Instructions given by Government:</b><br>No other verbal instruction given during the day by the government.<br><br><b>Safety Inspection / Safety Meetings:</b><br>Tailgate Safety Meeting held prior to start of day's work activities. All developement activities were conducted in accordance with US EPA SOP #2044. All piezometers were purged using a wattera pump. Puring was conducted until turbidity readings of groundwater in each piezometer reached 50 NTUs or a two hour maxium purge time was reached. All development field data was collected and recored on Development Data Forms.<br><br>Materials Brought on Site:<br><br>None<br><br>Equipment Brought on Site:<br><br>Well Development Equipment: Water level meters, PID, Wattera Pumps, Generators, Tubing, Turbidity Meters, and YSI meters.<br><br>Additional Notes:<br><br>None.<br><br><b>Verbal Instructions given by Government:</b><br>No other verbal instruction given during the day by the government.<br><br><b>Safety Inspection / Safety Meetings:</b><br>Tailgate Safety Meeting held prior to start of day's work activities. **QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Conducted oversight of EQ NE and NE Liner Systems

EQ NE - Loading and Disposal of Waste and Concrete

NE Liner Systems - Landfill Liner Repair

**Activities in Progress (List by Activity Number)**  
 DFW: Site Restoration / Demobilization

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 There were no delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided the oversight of EQ NE during the waste/concrete loading for disposal. Provided oversight of NE Liner Systems during the repair of the landfill liner around newly installed piezometers. Took photographic documentation of liner repairs. Photo IDs: 112012-01 and 112012-02.

EQ NE: Completed the loading and off-site disposal of the stockpiled waste and concrete excavated during the construction of the barrier wall. Waste loaded into a trailer for disposal at the Cassella landfill in Southbride, MA. Concrete loaded in a tri-axil truck for disposal/recycling at Boro Sand and Gravel in North Attleboro, MA. Trucking was completed by Goulet Trucking as a subcontractor to EQ NE. Area where waste and concrete was stockpiled was back-bladed with a loader following the completion of loading activities.

NE Liner Systems: Completed the repair of the landfill liner around piezometers PZ-12-02 through PZ-12-06. Repairs made with 40 mil PVC material and repairs seams were made with chemical agent. See photos 112012-01 and 112012-02 for details on repairs.

Material Brought on Site:

40 mil PVC material and chemical agent (glue).

Equipment Brought on Site:

Catapillar Loader

Additional Notes:

None.

**Verbal Instructions given by Government:**  
 No other verbal instruction given during the day by the government.

**Safety Inspection / Safety Meetings:**  
 Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's reviewed prior to start of work activities.

# MEMO

**To: Mr. Randal LeCuyer, USACE Construction Representative**

**From: Sovereign Consulting, Inc.**

**Date: 11 January, 2013**

**Re: Barrier Wall Construction Final Inspection**

---

The purpose of the memorandum is to present details of a Final Inspection for activities conducted by Sovereign Consulting Inc. (Sovereign) under contract #W912WJ-10-D-0003, Task Order 0002, Task 25 as part of the Barrier Wall Construction Non-Time Critical Removal Action at the Shepley's Hill Landfill (SHL) at the former Fort Devens Army Installation (Fort Devens) located in Devens, Massachusetts (MA).

On 28 November, 2012 a Final Inspection for the Barrier Wall Construction at the SHL was conducted in accordance with the project Contractor Quality Control Plan (CQCP). Present during the inspection was Mr. Jonathan Chaffee, Sovereign On-site QC Manager and yourself. Weather conditions during the inspection were clear with temperatures in the 40 degree Fahrenheit temperature range. No visibility or ground cover issues were present during the inspection.

During the inspection a walk-through of the limit of work associated with the barrier wall construction was completed and results of site restoration activities reviewed. During the inspection no major comments or further instructions were presented to Sovereign by the USACE. Based on the results of the Final Inspection and the issuance of email correspondence on 28 November, 2012 from you to Ms. Ellen Iorio, PE (USACE Project Manger), Sovereign understands that all work items related to the construction of the barrier wall at SHL are considered complete. Please confer with acceptance of this memo

## Chaffee, Jonathan

Caveats: NONE

Jonathan,

The final inspection meeting minutes are accepted.

Thank you,

Randy

Subject: Barrier Final Inspection Memo

Randy,

Sovereign received your 11/29/12 email sent to Ellen notifying her that a final inspected had been conducted for the Barrier Wall Construction at the project was considered 100% complete. However, it appears that we also have to close the loop in accordance with Section 7.3 of the project CQCP. That section specifies that Sovereign must issue meetings of the final inspection and they must be accepted by USACE.

As such, please review the attached memo and advise on acceptance of the meeting minutes.

Thanks

Jonathan

Jonathan J. Chaffee

**Response to 10 April 2013 MassDEP Comments on  
DRAFT REMOVAL ACTION COMPLETION REPORT  
SHEPLEY HILL LANDFILL BARRIER WALL  
Former Fort Devens Army Installation  
February 2013**

---

**Comment 1** – Section 4.5: For future reference, the report should include a brief summary of the work conducted to design the backfill material (associated data provided in Appendix A).

*Response:* A Section 3.4 has been added to the Removal Action Completion Report (RACR) detailing the backfill material design.

**Comment 2** – Section 4.6.3: Statements indicating that MassDEP agreed with the placement of piezometer screens should be corrected or deleted. MassDEP's August 28, 2012 comments on the removal action workplan included the recommendation to place screens across the water table so that the piezometers could be used to determine cross-wall head differences and assess lateral groundwater flow directions. Because the piezometers were not screened across the water table, water level measurements may not be reliable for determining lateral flow directions and arsenic flux. To address this uncertainty, an assessment should be conducted to determine whether or not water level measurements obtained from these piezometers are representative of the water table, and if they are not, to determine what additional water table control may be needed to assess flow directions and flux.

*Response:* This section has been revised to remove the reference to MassDEP concurrence. However, the Army maintains that the existing construction of the barrier wall piezometer screens is appropriate to determine lateral flow direction across the wall as the aquifer is located in an extremely homogenous medium sand. Hydrogeologically, in an aquifer with no vertical anisotropy with well screens and risers penetrating no confining layers, well screens placed at the surface, in the middle of the aquifer or near the bottom of the aquifer will all result in consistent, reliably groundwater measurements.

**Comment 3** – Appendix F appears to be incomplete; results from one of the 18 backfill samples were not included.

*Response:* Appendix F had been amended to include results of all 18 backfill samples.

---

**Response to 12 April 2013 EPA Comments on  
DRAFT REMOVAL ACTION COMPLETION REPORT  
SHEPLEY HILL LANDFILL BARRIER WALL  
Former Fort Devens Army Installation  
February 2013**

---

**General Comments:**

**Comment 1** - In EPA's May 22, 2012 comment on the Draft Removal Action Work Plan, General Comment 1 referred to EPA Region 1's Office of Site Remediation and Restoration "*Clean and Greener Policy for Contaminated Sites*" and EPA Fact Sheets on Green Remediation Best Management Practices. EPA's comment requested that Army conduct a quantitative or qualitative analysis on whether any implemented Green Remediation changes resulted in reductions to GHG emissions and/or resource use and that Army report this data in the Removal Action Completion Report. Army's response explained that a third party Green and Sustainable Remediation (GSR) study was performed on the Barrier Wall remedy by the US Army Engineering and Support Center, Huntsville (USAESCH), Environmental and Munitions Center of Expertise (EM CX), pursuant to the Department of Defense (DoD) Memorandum "*Consideration of Green and Sustainable Remediation Practices in the Defense Environmental Restoration Program*" (DoD, 2009) and that the results of this evaluation were incorporated into the design. Please add a section into the report to discuss the implemented Green Remediation elements that were incorporated into the design and include, at least, a qualitative analysis on resultant reductions to GHG emissions and/or resource use.

Response: A statement has been included under Section 3.3 of the RACR, stating that the results of a third party Green and Sustainable Remediation (GSR) study on the proposed Barrier Wall remedy as well as other alternatives evaluated during the FFS, performed by the US Army Engineering and Support Center, Huntsville (USAESCH), Environmental and Munitions Center of Expertise (EM CX), pursuant to the Department of Defense (DoD) Memorandum "*Consideration of Green and Sustainable Remediation Practices in the Defense Environmental Restoration Program*" (DoD, 2009) was incorporated into the design.

*It is noted that reductions in GHG emissions and/or resource use was only associated with the heavy diesel power equipment and transportation of borrow material which was provided via a local quarry. As such, a qualitative analysis on resultant reductions to GHG emissions and/or resource use is not appropriate for this scenario and therefore not included.*

**Comment 2** - Overall, the report does not discuss or elaborate on the results of field and quality control data and whether the barrier wall construction adhered to the design as outlined in the 100% Design Submittal and specifications. Nor does it discuss whether the removal action objectives were satisfied. In addition, there is no discussion of any changes to the design that may have been made based on field conditions. Revise the report to include these discussions.

Response: Section 6.0 and associated subsections discuss the both on-site and off-site quality control procedures and testing completed throughout the construction of the barrier wall. Section 6.0

*and associated subsections have been revised to include language elaborating on the results of the quality control data. Additionally, results of all on-site and off-site quality control procedures and testing are included in Appendix E through J.*

*To address the comment on whether the removal action objectives were satisfied, the following statement has been added to Section 11.0 of the RACR:*

*“The installation of the barrier was completed in accordance with the design, set forth in the RAWP, to provide a low permeable barrier from ground surface to the top of competent bedrock in order to mitigate arsenic-in-groundwater flux from SHL to Red Cove/Plow Shop Pond. Results of the removal actions performance monitoring program will be presented and incorporated in the SHL Long-term Monitoring and Maintenance Plan (LTMMMP) Update in fall 2013.”*

*An additional section (Section 4.7) has been added to the RACR documenting modifications made during constructions.*

#### **Specific Comments:**

**Comment 1** - The report states, “The predominant source of the dissolved arsenic emanating from the landfill appears to be naturally occurring arsenic within the aquifer sands and bedrock materials.” As repeatedly stated by EPA in past correspondence, although it may be demonstrated that the mass of arsenic in the overburden soil is larger than the mass of arsenic in the landfill waste, available data clearly show that the landfill waste contains arsenic, and the highest concentration of arsenic in the waste is equal to the highest concentrations found in the soil. Therefore, it must be assumed that landfill waste is contributing arsenic to site groundwater. As further noted by EPA in past correspondence, while recognizing that natural conditions do play a role, EPA does not agree with the Army’s conclusions that arsenic in the aquifer materials is the primary, or predominant, source of dissolved arsenic in groundwater.

*Response: It is noted that the Army disagrees with EPA’s position for the reasons documented in the SAR (Sovereign, 2011), the Army’s Statement of Army Position Following the Withdrawal of the Draft Final Focused Feasibility Study For Shepley’s Hill Landfill, Devens, MA (August 2012), and the scientific publications, that all clearly support the Army’s CSM for SHL.*

**Comment 2** - Section 2.0, Page 3: Paragraphs 3 and 4 discuss Army’s AOC72 risk assessment. As detailed in EPA’s correspondence throughout the AOC72 RI process, EPA disagrees with the Army’s risk assessment language. EPA concludes that the weight of evidence provided in the AOC72 RI supports the conclusion that arsenic and ammonia are likely to be causally associated with adverse ecological impacts in Red Cove. Therefore, EPA concludes that actionable risk under CERCLA has been demonstrated for the Red Cove area of the pond and that risks are likely attributable to Army sources.

*Response: Comment noted, however the paragraphs noted in Section 2.0, Page 3 are an accurate summary of the risk from the weight of evidence put forth in the RI (AMEC, 2010). As such, the Army does not plan to alter the language noted.*

**Comment 3 - Section 4.5.1 and Figure 3, Barrier As-Built Profile:** The report should discuss the differences in bedrock depths depicted in the *Interpretive Subsurface Profile Along Vertical Hydraulic Barrier* (Sheet 6, 100% Design Submission) and Figure 3. Based on review of the report, it appears that subsurface conditions encountered in the field were not consistent with anticipated conditions. Comment on the reasons for the differences and whether the barrier wall meets the design intent to reach competent bedrock and how these differences in bottom elevation depths may potentially impact the performance of the barrier wall.

*Response: As requested a discussion on the differences in bedrock depths between the Interpretive Subsurface Profile Along Vertical Hydraulic Barrier (Sheet 6, 100% Design Submission) and the actual bedrock profile, depicted on Figure 3, have been included in Section 4.5.1 of the RACR.*

**Comment 4 - Section 4.5.1 and Figure 2, Barrier Wall Site Plan:** Section 4.5.1 of the report indicates that station locations were established every 10 feet. However, the figure shows stations at every 100 feet. Please clarify.

*Response: As stated in Specification Section 01351, Paragraph 3.7 excavation and backfill soundings were required to be taken every 20 feet along the trench centerline using a weighted tape. In order to better ensure clean contact with competent bedrock throughout the entire excavation of the trench, we requested the contractor to supersede the specifications and conducted soundings and determined refusal every 10 feet along the trench centerline using a weighted tape as described in Section 4.5.1 of the Draft RACR. The refusal depths at each 10 foot section were used to develop an as-built vertical profile included as Figure 3 of the RACR.*

*Figure 2 is not intended to represent these 10 foot stations as the figure is a general aerial photograph plan meant to illustrate the location of the barrier wall within the Shepley's Hill Landfill and the locations of the barrier in relations to Red Cove/Plow Shop Pond. As-Built Survey plans included as Figure 5 and Figure 6 in the RACR denote 50 and 100 hundred foot station locations professionally surveyed by WSP Sells.*

**Comment 5 - Section 4.5.1 and Appendix E – Results of On-Site QC measurements:**

- Moretrench Reports: There are instances at which the bentonite slurry results (viscosity, density, filtrate loss) are outside the acceptable criteria (see results for 8/20 8/23, 8/27, 8/28, 8/29, 8/30, 8/31, 9/4). Provide comments to address corrective actions and/or the rationale for acceptance of these data.
- There are instances in which Moretrench backfill slope trench depths and quantity of readings do not correlate with Contractors Quality Control Report (QCR) (i.e., 8/20, 8/21 “end of shift” vs. “final trench depths”). Explain the reason for the discrepancies.

Response:

- Bentonite slurry values included under the "Requirement" column on Moretrench Daily QC reports are considered action levels, where adjustments to the slurry would be required following the acknowledgement of the on-site QC testing results. Adjustments to the slurry were made by Moretrench following acknowledgement of the on-site QC testing results outside of the actions levels. Adjustments completed by Moretrench to return the characteristics of the slurry back to below actions levels included the addition of fresh slurry to the trench.
- Moretrench's backfill slope "end of shift" soundings do not correlate with the Contractors QCR "final trench depths" because these values are a measurement of two different parameters. The "final trench depths" included in the Contractors QCR are the depths at which refusal was determined for specific stations by the Engineer during that specific work day. The Moretrench backfill slope "end of shift" soundings of the trench are conducted to determine the location and slope of backfill material in the trench at the end of each work day. The soundings at some locations will not correlate as backfill is added to the trench throughout the work shift. For example, comparing the QCR final trench depth (20.5') at station 1+00 to the Moretrench end of shift value (18.0') on 8/20/12 a difference 2.5' can be seen. This difference is due to the fact that refusal was determined to be at 20.5' at station 1+00 early within the work shift and backfill material, which was added to the trench throughout the day, had slide as expected and was present at station 1+00 by the end of the work shift. Comparing "final trench depths" and "end of shift" soundings at station 1+70 for 8/20/13 it can be seen that both soundings are equal (27.0'). Refusal was determined to be at 27.0' at station 1+70 late within the work shift and backfill material had and was not present at station 1+70 by the end of the work shift.

**Comment 6 - Sections 6.1.2, 6.1.3 and Appendix J (QCRs):**

- 8/15/2012: Two inches of precipitation was noted. There are no comments addressing these conditions. Describe how weather conditions may have potentially affected site activities.
- 8/28/2012: One of the notes indicates that trench soundings (for bedrock) recorded in the morning differed from soundings conducted at the end of the day (by 2 feet) and may have been attributed to sliding of backfill. Please elaborate and consider adding a discussion to the report to address these findings.
- 8/29/2012: The report indicates that the depth of bedrock (vicinity of Station 4+50) was encountered at an unanticipated depth as compared to specifications, based on boring log data. Please elaborate and consider adding a section to the report to address these findings. (Refer to Specific Comment #3).

Response:

- After reviewing historical meteorological data for 8/15/2012 it was determined that the two (2) inches of precipitation noted on the Contractor QCR was a misprint. The review of the historical meteorological data determined that 0.46 inches of precipitation was received on 8/15/12. As noted in the 8/15/12 Contractor QCR a majority of the work completed during

- the day by Moretrench included continued mobilization and site preparatory activities along with mixing and filling of frac-tanks with slurry. The only excavation activities conducted during the day consisted of the excavation of the lead-in trench ceasing at station 0+00. As a majority of the 8/15/2012 work shift included mobilizations activities and only excavation of the lead-in trench was completed towards the end of the work shift the 0.46 inches of precipitation received during the day would have no potential effects on the constructability of the barrier wall. As noted as been added to the 8/15/2012 QCR included in Appendix J to amend the amount of precipitation received at the site during the work shift.
- The 8/28/12 "start of shift" sounding of station 3+20 (20.5') differed from the 8/27/12 "end of shift" sounding (22.4') by 1.9' feet. On the morning of 8/28/12 the sides of the trench in the vicinity of station 3+20 were inspected by the Engineer. As noted in the 8/28/12 Contractor QCR, the inspection revealed no evidence of slough or cave-in of the trench in this area. It was concluded by the Engineer that due to the lack of evidence of sloughing or cave-in that backfill likely slid from stations 3+00 and 3+10 to station 3+20 during the time between the end of the work shift on 8/27/12 and the start of the work shift on 8/28/12. Other evidence supporting the sliding of backfill includes shallower trench depth soundings at stations 3+00 and 3+10 at the end of the shift on 8/27/12 when compared to trench depth sounds during the start of the shift on 8/28/12. It should also be noted that refusal for station 3+20 was determined by the Engineer to be at 34.5' on 8/23/12. Backfill material had been present at station 3+20 since the "end of the shift" soundings on 8/23/12 (32.7').
  - As noted in the 8/29/12 Contractor QCR, a lengthy discussion was held between Sovereign, AMEC, and the USACE about refusal depth at station 4+50. During discussions boring logs and working platform elevations were reviewed in detail. It was concurred that the area of weathered bedrock indicated on the Interpretive Subsurface Profile Along Hydraulic Barrier (Sheet 6, 90% Design Submission) was extrapolated from two (2) boring logs in the vicinity of station 4+50. Boring SHL-11-02 had indicated evidence of weathered bedrock. Boring SHL-11-02 had an approximate off-set of twenty (20) feet from the barrier wall alignment. Boring SHL-12-06 which has an approximate off-set of zero (0) feet from the barrier wall alignment did not indicate evidence of weathered bedrock and a depth of bedrock at 42 feet below ground surface (bgs). Moretrench was unable to excavate deeper than 39.4 feet bgs at station 4+50 following two and half hours of ripping on the station. Additionally, Moretrench worked the station from both directions of the vertex with the excavator. It was determined in the field by Sovereign, AMEC, and the USACE, that Moretrench would work the area for another half an hour the following day and if no progress in a downward trend was made then it would be determined that refusal at station 4+50 had been met. This was completed and Moretrench was not able to excavate past 39.4 feet bgs. It should also be noted that the weather bedrock removed from Interpretive Subsurface Profile Along Hydraulic Barrier (Sheet 6, 100% Design Submission). The above language as been added to Section 6.1.2 of the RACR.

**Comment 7 - Figure 3, As-Built Profile:** Well number "P2-12-08" is shown twice. Please determine if one of the identifiers should be "P2-12-06".

Response: Figure 3, As-Built Profile has been amended to correctly depict the locations of PZ-12-06 and PZ-12-08.

**Comment 8 - Figure 5, As-Built Survey:** *Revise the scale of the figure to match the Restoration and Final Conditions Plan (Sheet 5, 100% Design Submission) for comparison purposes and to improve legibility.*

Response: *The scale of Figure 5, As-Built Survey has been amended to improve legibility. Additionally a Figure 6, Enlarged As-Built Survey has been added to the RACR.*

---

**Response to 28 May 2013 EPA Follow-up Comments on  
DRAFT REMOVAL ACTION COMPLETION REPORT  
SHEPLEY HILL LANDFILL BARRIER WALL  
Former Fort Devens Army Installation  
February 2013**

---

**General Comments:**

**EPA Response to RTC General Comment 2** - EPA will need to review the new Section 4.7 upon submittal of the Draft Final RACR.

Response: Comment noted.

**Specific Comments:**

**EPA Response to RTC Specific Comment 3** - EPA will need to review revised Section 4.5.1, upon submittal of the Draft Final RACR.

Response: Comment noted.

**EPA Response to RTC Specific Comment 4** - Please note the term “station” is confusing in the report, since it is used for measuring points, as well as for alignments. Please consider using a different terminology for the measuring point, or add the explanation provided in the responses to the report.

Response: Since the term “station” is used repeatedly in the daily QC Logs as well as other places, we believe it will provide more confusion rather than a benefit in changing the terminology in the report; therefore we have included an explanation of the term in Section 4.5.1 of the Draft Final report.

**EPA Response to RTC Specific Comment 5** - Please add the explanation in the response to Section 4.5.1 of the report and elaborate on the adjustments that were made to the slurry. Consider including a list of those dates for which QC testing results were outside of the action levels and detailing the specific adjustments that were made to the slurry.

Response: The following explanation has been added to Section 6.1.2 rather than Section 4.5.1 of the Draft Final report as Section 6.1.2 details field quality control testing conducted during slurry wall installation as Section 4.5.1 details construction of the slurry wall:

*“As discussed in **Section 4.5.1**, results of on-site slurry testing were compared to action levels set by project specifications. In the event that results of on-site slurry testing were outside of the action levels, proper adjustments to the slurry within the trench were made by Moretrench to return the characteristics of the slurry back to below actions levels, accomplished by the addition of fresh slurry from the mixing frac-tanks into the trench. All results of on-site QC slurry testing were found by the AMEC project engineer to be acceptable and meet the required project criteria.”*

Army's response provides clarification, since the report was unclear on the "final trench sounding" and "final trench depths" as documented in the Contractor's QCR. Add the explanation included in the response to the report and provide clarification on the "end of shift". In addition, EPA requests that Army prepare a summary table that includes: (a) Station/end of shift sounding, (b) final trench depths, (c) date, and (d) notes

*Response: As requested explanations provided in the response have been added to Section 4.5.1 of the Draft Final report to clarify "Final Trench Depths" documented in the Contractor's QCR and Section 6.1.2 to clarify the Backfill Slope "start of shift" and "end of shift" soundings documented within Moretrench QC Reports. The Army is of the opinion that a summary table documenting station/end of shift soundings, final trench depths, date, and notes is not necessary as all this information has been provided within report Figures and Appendices and is most easily understood and interpreted in the Figures.*

---

**Response to 17 July 2013 MassDEP Comments on  
DRAFT FINAL REMOVAL ACTION COMPLETION REPORT  
SHEPLEY HILL LANDFILL BARRIER WALL  
Former Fort Devens Army Installation  
June 2013**

---

**Comment 1** - Section 4.6.3 and 6.3: Text suggesting that MassDEP approved or endorsed the piezometer screen placements (“Based on follow-up discussions with the MassDEP...”; “As agreed upon with the regulators...”; and “...parameters negotiated with all pertinent parties.”) should be deleted from the report. MassDEP’s recommendations for screen placements were conveyed with the August 28, 2012 comments on the removal action workplan.

*Response:* Prior to the installation of the piezometers along the barrier wall, discussions were held with the MassDEP and the EPA regarding piezometer screen placements. The Army maintains that the current piezometer screen placement depths will yield accurate water level data along the barrier wall that can be utilized with other water level data already being collected due to the homogeneity of the formation and lack of confining layers. However, the indicated sections of the text have been revised to remove suggestions that MassDEP approved or endorsed the piezometer screen placements.

**Comment 2** - Appendix F appears to be incomplete; results from one of the 18 backfill samples were not included.

*Response:* Appendix F had been amended to include the results for sample BFM-21. Results of all 18 backfill samples are now included in Appendix F.
