## Mirafi® 600X

Mirafi® 600X geotextile is composed of high-tenacity polypropylene yarns, which are woven into a stable network such that the yarns retain their relative position. Mirafi® 600X geotextile is inert to biological degradation and resistant to naturally encountered chemicals, alkalis, and acids.

### APPENDIX

- CORPORATE CERTIFICATIONS & MEMBERSHIPS
- PVC GEOMEMBRANE INSTITUTE (PGI) FABRICATION & INSTALLATION MANUAL

## 1. INTRODUCTION

The purpose of this document is to provide an overview of all Quality Control (QC) procedures conducted by Solmax International Inc. during the factory fabrication of Polyvinyl Chloride (PVC) geomembrane panels.

The following general guidelines are given for information purposes only. Project specifics can modify this Quality Control Program, which acts as a basis for projects without plans and specifications.

## 2. MANUFACTURING CAPABILITIES

The **Solmax International** plant is located in Varennes, Canada and it employs approximately 75 employees. The plant houses a state-of-the-art three-layer and a monolayer film blown extruders producing all common types of polyethylene geomembrane in 22 feet (6.7 m) wide rolls with the thickness ranging from 20 to 100 mil (0.50 to 2.50mm). Solmax processes various types of resins including High Density Polyethylene (HDPE) and other polyethylene configurations such as Very Flexible Polyethylene (VFPE). All of these resins can be used to manufacture geomembranes with smooth surfaces or with texture on one or both sides in order to improve friction properties.

Solmax also manufactures among the biggest PVC geomembrane panels in the industry on thickness ranging from 0.5mm to 1.50mm and reaching up to 4500m<sup>2</sup> long.

### SIZE OF PLANT:

- APPROXIMATE AREA OF THE PLANT IS 48,000 SQUARE FEET
- OUTSIDE STORAGE IS APPROXIMATELY 150,000 SQUARE FEET

### EQUIPMENT:

- BLOWN FILM BATTENFELD GLOUCESTER ENG. MONOLAYER 86 INCHES (CAPACITY OF 3200 POUNDS PER HOUR)
- BLOWN FILM BATTENFELD GLOUCESTER ENG. COEXTRUSION 3 SCREWS 86 INCHES (CAPACITY OF 3500 POUNDS PER HOUR)
- SOLMAX HAS TWO POLYETHYLENE PRODUCTION LINES
- K-BAR DIELECTRIC WELDING UNITS OF 15 KWA
- SOLMAX HAS THREE PVC PRODUCTION LINES

### NUMBER OF SHIFTS PER DAY:

- 2 SHIFTS OF 12 HOURS AND THE PRODUCTION IS CONTINUOUS (24/24)
- PRODUCTION IS CONTINUOUS

### PRODUCTION PER SHIFT:

- 65, 000 POUNDS PER SHIFT
- 15,000 M2 (BASED ON 0.75 MM THICK) FOR PVC

### ANNUAL CAPACITY

- APPROXIMATELY 48 000 000 POUNDS ANNUALLY (PE)
- APPROXIMATELY 15,000,000 M2 ANNUALLY (PVC)

### 3. BRIEF CORPORATE HISTORY

#### PVC FABRICATION ACTIVITIES

|      |                                                                                                    |

## **5. QUALITY CONTROL (QC) PROCEDURES OF ROLL GOODS**

All delivered roll goods shall be visually inspected by the quality control technician for damage during shipment and handling and for proper labeling. The quality control manager shall verify that all roll goods meet or exceed the project specifications by reviewing the manufacturer's quality control test results, test methods and frequencies (see "Manufacturer's Certification Results" in Appendix A). Any roll deemed unacceptable shall be separated and identified by a nonconformity tag in order to have it removed from production until satisfactory remedial actions have been taken.

Each production order shall be fully documented by the lot and all roll numbers used for the specific panel. A record drawing for each panel shall also be prepared indicating the location and dimension of each roll, or parts thereof, used to fabricate the given panel.

## **6. PVC FACTORY FABRICATION**

Prior to any production, all work areas shall be cleaned and kept free of any obstacles liable to cause damage or injure personnel. The production manager - and, if necessary, the quality control manager - shall hold a pre-production meeting with the production personnel in order to establish and convey all project specific requirements such as minimum seam strength and packaging procedures.

## **7. DIELECTRIC WELDER QUALITY CONTROL PROCEDURES**

### **7.1 CALIBRATION**

Prior to any assembly or calibration procedure, the welding technicians shall verify that all material surfaces to be welded are clean and dry. If necessary, for conditioning purposes, the roll shall be kept inside the facility for at least one work shift prior to welding. A sample piece of material from the roll to be seamed shall be cut and kept for calibration purposes.

Calibration procedures shall be performed following any production halt: at the start of every shift, after every break and prior to staff or material change. Calibration procedures shall also be performed following any event causing temporary production halt such as power failure, over-heating, etc...

The QC technician shall perform a welding test on a sample piece of material, approximately 8" X 48" (200mm x 1.2 meter), from which 10 test specimens shall be die-cut. Five peel tests and five shear tests shall be performed by the QC technician on a calibrated tensiometer. Peel and shear specimens shall be alternated when cut from the seam sample.

A peel test is conducted by submitting a one inch-wide (25mm) strip of seam (specimen) to a tensile force on a calibrated tensiometer, trying to "peel" or open the seam (see figure 1). A shear test is similar, but the tension is applied in the plane of the seam (see figure 2).

Figure 1 - PEEL TEST

Figure 2 - SHEAR TEST

Peak values shall be recorded along with the locus of break (see "US-EPA Classification for types of break" in Appendix C). The QC technician shall verify that all calibration test results meet or exceed the project requirements for both peel and shear strength (see table 1 for typical peel and shear testing results).

Due to the lengthy testing process involved, welding may commence prior to the completion of all test results to prevent the welding equipment from excessive cooling. After testing 5 out of the 10 specimens, the QC technician may authorize welding to start if all results from those specimens meet the specified values.

## 7.2 DESTRUCTIVE TESTING (only upon request)

Destructive testing is performed at a frequency of 1 per 3000 linear feet (910 meters) of seaming, but not less than once per panel. On each sample, the same procedures described for calibration are followed, i.e. 5 specimens are tested for peel strength and 5 for shear strength. The QC technician shall verify that all destructive test results meet or exceed the project specific requirements (as shown in table 1 next page).

**Table 1 - Typical peel and shear strength values**

| <b>FACTORY SEAMS</b> |                           |                           |                               |                           |

**NOTE:** For shear test, all specimens shall denote “brk” or “se” type locus of break as illustrated on the “single-track geomembrane weld” chart. . Values are as per PGI 1103

### 7.3 VISUAL INSPECTION AND REPAIR PROCEDURES

At all times, all welding personnel shall pay special attention to the integrity of the panel. Any suspected damage shall be reported immediately to the quality control technician who will temporarily stop production and proceed with repair procedures. Repairs shall consist of hand welding a patch with a hot air gun and pressure roller, followed by a visual verification of the repair. The QC technician shall then identify the repaired area on the corresponding record drawing.

## **7.4 DOCUMENTATION**

All manufacturer's certification results and in-house QC test results, along with the rolls used and the record drawings shall be enclosed in the final report (MF-CQ-31). Quality control test results shall be documented by the QC technician with the following information:

- Name of project
- Test number
- Weld number
- Date and time
- Power of the welding equipment
- Welding time
- Shear results
- Peel results
- Locus of break
- Name of QC technician
- Name of welding technician

This final report shall then be archived for a minimum period of 10 years. A copy shall be made available to the client, if requested.

## **7.5 SPECIMEN SAMPLES**

All specimen samples and an unused portion of the roll,  $\pm 6$  inches ( $\pm 150$ mm), shall be clearly identified with their corresponding test number and archived for a minimum of 10 years, unless otherwise specified. All specimen samples and unused portions shall be made available to the client upon request.

## **8. PANEL AND ROLL IDENTIFICATION**

Each panel shall be clearly identified with its corresponding number. Furthermore, each strip of material welded together to form the panel is also identified by its respective roll number. All unused portions of roll goods must be clearly identified for storage and further use.

## 9. PACKAGING

Each pallet can contain more than 1 panel and shall be packaged in a protective geotextile in order to prevent damage from shipping and handling. Special attention shall be given to all pallets for nails and chipped planks. In no event shall the panel rest directly on the wooden pallet; a cushion material must always be used between the pallet and the geomembrane panel. Each pallet shall be properly labeled with its corresponding project name, type of material, panel number and dimensions.

This certifies that

**Solmax International Inc.**

is a member of

**PVC Geomembrane Institute**

in good standing with all rights  
and privileges pertaining thereof.

## environmental U.S.A. inc.

---

P.O. Box 1226, 770 Main Street, Lewiston, Maine 04240 U.S.A. Tel: (207) 786-6808 Fax: (207) 786-6835

### QUALITY CONTROL MANUAL

#### *IMPORTANT NOTE*

The Terrafix Quality Control Manual is intended as a guideline only for geomembrane installation. This manual does not supercede the project specific specification.

#### *INTRODUCTION*

This manual addresses the Quality Control Program developed and utilized by Terrafix Environmental U.S.A. Inc. installation personnel to assure the quality of workmanship and the installation integrity of geomembranes. Terrafix Inc. recognizes that careful and specific documentation of the installation is required to substantiate this Quality Control Program.

#### *GEOMEMBRANE INSTALLATION*

##### **2.1 SUBGRADE SURFACE**

- 2.1.1** The general and/or earthwork contractor shall be responsible for preparing and maintaining the subgrade in a condition suitable for installation of the liner unless specifically agreed otherwise.
- 2.1.2** Surfaces to be lined shall be smooth and free of debris, roots, and angular or sharp rocks larger than three quarter (3/4) inches/9mm in diameter to a depth of four (4) inches/98mm. All fill shall consist of well-graded material free of organic, trash, clay balls or other damaging matter. No sharp edged stones, stones larger than one (1) inch/24.5mm in diameter or hard objects shall be allowed within the top four (4) inches/100mm of the subgrade. The surface shall be compacted in accordance with design specifications but in no event below the minimum required to provide a firm unyielding foundation sufficient to permit the movement of vehicles and welding equipment over the subgrade without causing rutting or other damaging effects. The subgrade shall have no sudden sharp or abrupt changes in grade.
- 2.1.3** The General and/or Earthwork Contractor shall protect the subgrade from desiccation, flooding and freezing, protection, if required, may consist of a thin plastic protective cover (or other material as approved by the engineer) installed over the completed subgrade until such time as the placement of geomembrane liner begins.

Subgrades found to have desiccation cracks greater than 1/2 inch/12.3mm in width or depth, or which exhibit swelling, heaving or other similar conditions shall be replaced or reworked by the general and/or earthwork contractor to remove these defects.

- 2.1.4** **Surface Acceptance:** Upon request, Terrafix Inc., will provide the Owner's and Contractor's Representatives with a written acceptance of the surface to be lined. This acceptance will be limited to an amount of area that Terrafix Inc. is capable of lining during a particular work shift. Subsequent repairs to the subgrade and the surface shall remain the responsibility of the earthwork contractor.

##### **2.2 CREST ANCHORAGE SYSTEM**

- 2.2.1** The anchor trench shall be excavated by the general and/or the earthwork contractor to lines and widths shown on the design drawings prior to geomembrane placement.
- 2.2.2** Anchor trenches excavated in clay soils susceptible to desiccation cracks should be excavated only the distance required for that days liner placement to minimize the potential of desiccation cracking of the clay soils.
- 2.2.3** Corners in the anchor trench shall be slightly rounded where the geomembrane adjoins the trench to minimize sharp bends in the geomembrane.

## **2.3 PREPARATION FOR GEOMEMBRANE DEPLOYMENT**

- 2.3.1 Panel Layout:** Prior to commencement of liner deployment, layout drawings shall be produced to indicate the panel configuration and location of seams for the project.
- 2.3.2 Identification:** Each panel used for the installation shall be given an numeric or alpha-number identifier consistent with the layout drawing. This identification number shall be related to a manufacturing roll number that identifies the resin type, batch number, and date of manufacture.

## **2.4 FIELD PANEL PLACEMENT**

- 2.4.1 Location:** Terrafix Inc. will attempt to install field panels at the location indicated on the layout drawing. If the panels are deployed in a location other than that indicated on the layout drawings, the revised location shall be noted in the field on an as-built drawing which will be modified at the completion of the project to reflect actual panel locations.
- 2.4.2 Weather Conditions:** Geomembrane deployment shall not be done during any precipitation, in the presence of excessive moisture (ie. fog, dew), in an area of standing water, or during high winds.

## **2.5 METHOD OF DEPLOYMENT**

- 2.5.1** The method and equipment used to deploy the panels must not damage the geomembrane or the supporting subgrade surface.
- 2.5.2** No personnel working on the geomembrane will smoke, wear shoes that can damage the geomembrane, or engage in actions which could result in damage to the geomembrane.
- 2.5.3** Adequate temporary loading and/or anchoring, (ie. sandbags, tires), which will not damage the geomembrane, will be placed to prevent uplift of the geomembrane by wind.
- 2.5.4** The geomembrane will be deployed in a manner to minimize wrinkles.
- 2.5.5** Any damage to a panel of geomembrane will be repaired in accordance with paragraph 4.3. Any area of a panel seriously damaged (torn, twisted, or crimped) will be marked, cut out, and removed from the work area with resulting seaming and/or repairs performed in accordance with Paragraph 4.3 of this document.

## **2.6 FIELD SEAMING**

### **2.6.1 General Requirements:**

- 2.6.1.1 Layout:** In general seams shall be oriented parallel to the slope, ie., oriented along, not across the slope. Whenever possible, horizontal seams should be located not less than five (5) feet/1.52 m from the toe of the slope. Each seam made in the field shall be numbered in a manner that is compatible with the panel layout drawing for documentation of seam testing results.
- 2.6.1.2 Personnel:** All personnel performing seaming operations shall be trained in the operation of the specific seaming equipment being used and will qualify by successfully welding a test seam as described in Paragraph 2.5.3. The project foreman will provide direct supervision of all personnel seaming to verify proper welding procedures are followed.
- 2.6.1.3 Equipment:**

**Fusion Welding:** Fusion Welding consists of placing a heated wedge, mounted on a self propelled vehicular unit, between two (2) overlapped sheets such that the surface of both sheets are heated above the polyethylene's melting point. After being heated by the wedge, the overlapped panels pass through a set of preset pressure wheels which compress the two (2) panels together so that a continuous homogenous fusion weld is formed. The fusion welder is equipped with a temperature readout device which continuously monitors the temperature of the wedge.

**Extrusion Fillet Welding:** Extrusion fillet welding consists of introducing a ribbon of molten resin along the edge of the seam overlap of the two (2) sheets to be welded. The molten polymer causes some of the material of each sheet to be liquified resulting in a homogeneous bond between the molten weld bead and the surfaces of the sheets. The extrusion welder is equipped with gauges giving the temperature at the nozzle.

- 2.6.1.4 Weather Conditions:** Terrafix Inc., relies on the experience of the project Superintendent and the results of test seams to determine seaming restrictions by weather. Many factors, such as ambient temperature, humidity, wind, sunshine, etc., can effect the integrity of field seams and must be taken into account when deciding whether or not seaming should proceed. Test seams, as described in Paragraph 2.5.3. are required prior to daily production seaming to determine if the weather conditions will effect Terrafix Inc., ability to produce quality seams. Additional non-destructive and destructive testing of productions seams substantiate the decision made by the Project Superintendent to seam on any given day.

**2.6.2 Seam Preparation:**

- 2.6.2.1 Fusion Welding:** Overlap the panels of Geomembrane approximately six (6) inches/150mm. Clean the seam area prior to seaming to assure the area is clean and free of moisture, dust, dirt, debris of any kind. No grinding is required for fusion welding.

Adjust the panels so that seams are aligned with the fewest possible number of wrinkles and "fishmouths".

A moveable protective layer may be used, at the discretion of the Terrafix Inc., Project Superintendent, directly below the overlap of geomembrane.

- 2.6.2.2 Extrusion Welding:** Overlap the panels of Geomembrane a minimum of four (4) inches/98mm. Temporarily bond the panels of Geomembrane to be welded, taking care not to damage the geomembrane.

Clean the seam area prior to seaming to assure the area is clean and free of moisture, dust, dirt and debris of any kind. Grind seam overlap prior to welding within one (1) hour of welding operation in a manner that does not damage the Geomembrane.

Purge the extruder prior to beginning the seam remove all heat-degraded extrudate from the barrel. Keep welding rod clean and minimize contact with the ground.

- 2.6.3 Test Seams:** Test seams shall be performed at the beginning of each seaming period and at least once each five (5) hours for each seaming apparatus used that day. Test seams shall be made on fragment pieces of the geomembrane liner and under the same conditions as the actual field installation.

- 2.6.3.1 Test Seam Length:** The test seam shall be at least three (3) feet/0.91m long and should be made by joining two (2) pieces of geomembrane at least 9 inches/220.5mm in width.

- 2.6.3.2 Sample Procedure:** Visually inspect the seam for squeeze out, footprint, pressure, and general appearance.

Two random samples one (1) inch/24.5mm wide shall be cut from the test seam. The specimens shall then be tested in peel using a field tensiometer and shall not fail in the seam. If a specimen fails the entire procedure shall be repeated.

If any of the second set of specimens fail, the seaming apparatus shall not be accepted and shall not be used for seaming until the deficiencies are corrected and a passing test seam is achieved.

After completion of the test the remaining portion of test seam can be discarded. Documentation of the test seams will be maintained listing seamer identification number, welder's name, temperature control setting and test results.

Passing test results records shall be maintained on Terrafix Inc. Form 1 (Pre-weld qualification testing) as enclosed.

- 2.6.3.3 General Seaming Procedures:** Seaming shall extend to the outside edge of panels to be placed in the anchor trench. While welding a seam, monitor and maintain the proper overlap. Inspect seam area to assure area is clean and free of moisture, dust, dirt, debris of any kind. Monitor temperature gauges to assure proper settings are maintained and that the

seaming apparatus is operating properly. Align wrinkles at the seam overlap to allow welding through the wrinkle.

Fishmouths or wrinkles at seam overlaps that cannot be welded through shall be cut along the ridge in order to achieve a flat overlap. The cut fishmouth or wrinkle shall be seamed. Any portion where the overlap is inadequate shall be patched with an oval or round patch of the same geomembrane extending a minimum of six (6) inches/147mm beyond the cut in all directions.

All cross/butt seams between two (2) rows of seamed panels shall be welded during the coolest time of the day to allow for contraction of the geomembrane.

All "T" joints shall have the overlap from the wedge welder seam trimmed back to allow an extrusion fillet weld. Then grind two (2) inches/49.5mm minimum on either side of the wedge welder seam and extrusion weld all of the area prepared by grinding.

### ***SEAM TESTING - GEOMEMBRANES***

#### **3.1 CONCEPT**

**3.1.1** Terrafix Inc. installation crews will non-destructively test all field seams over their full length using air pressure, vacuum or other approved test methods, to verify the continuity and integrity of the seams.

#### **3.2 AIR PRESSURE TESTING**

The welded seam created by Terrafix Inc's., fusion welding process is composed of two distinct welded seams separated by an un-welded channel approximately 3/8 of an inch/9mm wide. The presence of the un-welded channel between the two welded seams permits Terrafix Inc's., fusion seams to be tested by inflating the sealed channel with air to a predetermined pressure and observing the stability of the pressurized channel over time.

**3.2.1 Equipment for Air Testing:** An air pump (manual or motor driven) capable of generating and sustaining a pressure between 25 to 30 psi., a rubber hose with fittings and connections, a sharp hollow needle with a pressure gauge capable of reading and sustaining a pressure between 25 to 30 psi. (or other approved pressure feed device).

**3.2.2 Procedure for Air Testing:** Seal both ends of the seam to be tested. Insert needle or other approved pressure feed service into the sealed channel created by the fusion weld.

Inflate the test channel to a pressure between 25 to 30 psi, in accordance with the following schedule, close valve, and observe initial pressure after approximately 2 minutes.

#### **INITIAL PRESSURE SCHEDULE\***

| MATERIAL THICKNESS (MIL) | MINIMUM PRESSURE | MAXIMUM PRESSURE |
|--------------------------|------------------|------------------|
| 40                       | 25               | 30               |
| 60                       | 27               | 30               |
| 80                       | 30               | 30               |
| 100                      | 30               | 30               |

\* Initial pressure settings are read after a two minute "relaxing period". The purpose of this "relaxing period" is to permit the air temperature and pressure to stabilize.

Observe and record the air pressure five (5) minutes after "relaxing period" ends and initial pressure setting is used. If loss of pressure setting is used. If loss of pressure exceeds the following or if the pressure does not stabilize, locate faulty area and repair in accordance with Paragraph 4.3.

**MAXIMUM PERMISSIBLE PRESSURE DIFFERENTIAL  
AFTER 5 MINUTES**

| MATERIAL THICKNESS (MIL) | PRESSURE DIFFERENCE |
|--------------------------|---------------------|
| 40                       | 4                   |
| 60                       | 4                   |
| 80                       | 4                   |
| 100                      | 4                   |

At the conclusion of the pressure test the end of the seam opposite the pressure gauge will be cut to ensure that the seam is not blocked. If the seam is blocked then the test will have to be repeated after the blockage is corrected. Remove needle or other approved pressure feed device and seal resulting hole by extrusion welding. Record test results on Terrafix Inc. Form 3 (Seam Recording and Air Testing) as enclosed.

- 3.2.3 In the event of a Non-Complying Air Pressure Test:** Check seam end seals and retest seams. If non-compliance with specified maximum pressure differential reoccurs, cut one (1) inch/24.5mm samples from each end of the seam and additional samples at the distance specified in Paragraph 3.4.3.1. Perform destructive peel tests on the samples using the field tensiometer.

If all samples pass destructive testing remove the overlap left by the wedge welder and vacuum test the entire length of seam in accordance with Paragraph 3.3. If a leak is located by the vacuum test, repair by extrusion welding. Test the repair by vacuum testing. If no leak is discovered by vacuum testing, the seam will be considered complete. If one or more samples fail the peel tests, additional samples will be taken in accordance with Paragraph 3.4.3.

When two (2) passing samples are located, the seam between these two (2) locations will be considered non-complying. The overlap left by the wedge welder will be heat tacked in place along the entire length of seam and the entire length of seam will be extrusion welded. Test the entire length of the repaired seam by vacuum testing in accordance with Paragraph 3.3.

**3.3. VACUUM TESTING**

This test is used when the geometry of the weld makes air pressure testing impossible or impractical or when attempting to locate the precise location of a defect believed to exist after air pressure testing.

- 3.3.1 Equipment for Vacuum Testing:** Vacuum box assembly consisting of a rigid housing, a transparent viewing window, a soft neoprene gasket attached to the bottom, port hole or valve assembly and a vacuum gauge. Vacuum pump assembly equipped with a pressure controller and pipe connections, a rubber pressure/vacuum hose with fittings and connections and bucket and means to apply a soapy solution.

- 3.3.2 Procedure for Vacuum Testing:** Trim excess overlap from seam, if any. Turn on the vacuum pump to reduce the vacuum box to approximately 3 in. of mercury, ie., 3 psi gauge. Apply a generous amount of a solution of strong liquid detergent and water to the area to be tested.

Place the vacuum box over the area to be tested and apply sufficient downward pressure to "seat" the seal strip against the liner. Close the bleed valve and open the vacuum valve. Apply a minimum of 3 in. Hg vacuum to the area as indicated by the gauge on the vacuum box. Ensure that a leak tight seal is created.

For a period of not less than 30 seconds, examine the geomembrane through the viewing window for the presence of soap bubbles. If no bubbles appear after 30 seconds, close the vacuum valve and open the bleed valve, move the box over the next adjoining area with a minimum 3 in. overlap, and repeat the process.

- 3.3.3 Procedure for non-complying test:** Mark all areas where soap bubbles appear and repair the marked areas in accordance with Paragraph 4.3. Retest repaired areas.

### 3.4 DESTRUCTIVE TESTING

The procedure of destructive testing is to determine and evaluate seam strength. These tests require direct sampling and thus subsequent patching. Therefore, destructive testing should be held to a minimum to reduce the amount of repairs to the geomembrane.

**3.4.1 Procedure for Destructive Testing:** Destructive test samples shall be marked and cut out randomly at a minimum average frequency of one test location every 1000 feet/or 300m of seam length. Additional destructive tests may be taken in areas of contamination, offset welds, visible crystallinity or other potential cause of faulty welds. Field test five (5) coupons in peel and five (5) coupons in shear and at least four (4) out of the five (5) coupons must pass the tensile strength properties in both peel and shear. Minimum strength of field seams when tested in shear shall be 90 percent and in peel 60 percent of the unseamed liner.

**3.4.2 Sample Size:** The sample should be twelve (12) inches wide/305mm with a seam fourteen (14) inches/356mm long centered lengthwise in the sample. The sample may be increased in size to accommodate independent laboratory testing by the owner at the owner's request or by specific project specifications.

A one (1) inch/24.5mm sample shall be cut from each end of the test seam for field testing. The two one (1) inch/24.5mm samples shall be tested in the field in a tensiometer for peel. If any field sample fails to pass, it will be assumed the sample fails destructive testing. The procedure outlined in Paragraph 3.4.3. shall be followed to locate passing samples to send to the laboratory.

If the sample passes the field test, the remaining portion of the sample test strip shall be sent to Terrafix Inc. These samples will be held in inventory available for further evaluation if required.

**3.4.3 Procedure in the event of Destructive Test Failure:** Cut additional field samples for testing. In the case of a field production seam, the samples must lie a minimum of ten (10) feet/3m in each direction from the location of the failed sample. Perform a field test for peel strength. If these field samples pass, then laboratory samples can be cut and forwarded to a laboratory for full testing.

If the laboratory samples pass then reconstruct the seam between the two (2) passing sample locations. Heat tack the overlap along the length of the seam to be reconstructed and extrusion weld. Vacuum test the extrusion weld. If either of the samples fail then additional samples are taken in accordance with the above procedure until two (2) passing samples are found to establish the zone in which the seam should be reconstructed.

All passing seams must be bounded by two (2) locations from which samples passing laboratory destructive tests have been taken. In cases of reconstructed seams exceeding 150 feet/45m a destructive samples must be taken and pass destructive testing from within the zone in which the seam has been reconstructed. All destructive seam samples sent to Terrafix Inc's, office shall be numbered and recorded on Terrafix Inc. Form 2 (Destructive Seam Testing) as enclosed.

### 3.5 QUALITY ASSURANCE LABORATORY TESTING

The remaining destructive sample may be sent to a laboratory and will be tested in "Seam Strength" and "Peel Adhesive" [ASTM D6392 with specimen 0.5 inches wide tested at two (2) inches per/minute]. Five (5) specimens shall be tested for each test method with data recorded. Four (4) out of the five (5) specimens must pass and not have more than 10% Film Tear Bond for each test in order for the seam to be considered acceptable.

## *DEFECTS AND REPAIRS*

### 4.1 CONCEPT

**4.1.1** Terrafix Inc. Project Superintendent shall conduct a detailed walk through and visually check all seams and non-seam areas of the geomembrane for defects, holes, blisters, and signs of damage during installation. All other Terrafix Inc., installation personnel shall, at all times, be on the lookout for any damaged area. Damaged area shall be marked and repaired.

## 4.2 REPAIR PROCEDURES

Any portion of the geomembrane showing a flaw, or failing a destructive or non-destructive test shall be repaired. Several procedures exist for repair and the decision as to the appropriate repair procedure shall be made by Terrafix Inc. Project Superintendent.

Procedures available for repair:

- 4.2.1 **Patching:** Used to repair large holes, tears and destructive sample locations. All patches shall extend at least six (6) inches/147mm beyond the edges of the defect and all corners of patches shall be rounded.
- 4.2.3 **Grinding and welding:** Used to repair sections of extruded seams.
- 4.2.4 **Spot welding or seaming:** Used to repair small tears, pinholes or other minor localized flaws.
- 4.2.5 **Capping:** Used to repair lengths of failed extruded seams. Removal of a bad seam and replacement with a strip of new material seamed into place.
- 4.3 **Verification of Repairs:** Every repair shall be non-destructively tested using the methods set out in Paragraph 3.4. Repairs which pass the non-destructive test shall be deemed adequate. Large repairs may require destructive test. Repair test results shall be logged on Terrafix Inc. Form 4 (Repair Report) as enclosed.

### **SAFETY MANUAL**

#### ***THE FOLLOWING SAFE PRACTICES ARE LISTED FOR YOUR PROTECTION***

##### **INTRODUCTION**

We expect each one of you not only to **READ** these rules and regulations but to **ABIDE** by them in your work. Each operation presents its own problem and no two jobs are alike. However, by following these safety practices along with all of our client's safety regulations, you can help us in making each project a safe place of employment for yourself and your fellow workers.

Accidents can be avoided and, therefore, Terrafix insists that everyone works safely. Always use good judgment and common sense. Remember that no one profits from accidents. We are concerned about your safety, help **US** keep **YOU** safe!

Should you require any additional information regarding this pamphlet, please contact:

Blu Alexander, Construction Manager  
Terrafix Environmental U.S.A. Inc.  
(207) 786-6808 PH  
(207) 786-6835 FX

##### **SUPERVISORS RESPONSIBILITY**

1. Be responsible for the safety of the entire project under their charge including accident investigation and reporting.
2. Actively enforce all aspects of the Occupational Health & Safety Act, project specific safety concerns as well as those of the company Safety Policies.
3. Train and explain safety procedures and policies to their workers, particularly to new workers.
4. Advise their workers of potential or actual dangers including hazardous materials specific to the work place.
5. Ensure personal protective equipment is used by workers as needed to perform their work in a safe manner.
6. Ensure that all equipment including safety and protective equipment is in good operating condition and that any defective equipment is immediately tagged and removed for repair.
7. Cooperate fully with the Safety Coordinator, where applicable.
8. Report all accidents and incidents immediately to management. WCB form must be submitted within 2 days of accident to WCB to prevent a fine of \$300.00 for late reporting. Accidents can now be phoned in at **(800) 636-4292**.
9. Investigate thoroughly any accident or incident occurring in the work place and implement the remedial steps necessary to prevent a recurrence.
10. Promptly submit to management any Accident/injury Report for every medical aid and/or lost time injury.

##### **EMPLOYEES RESPONSIBILITY**

1. Perform their work with a safety first attitude.
2. Comply with the Occupational Health & Safety Act as well as this company's Safety Policy.
3. Immediately report any injury or accident, no matter how minor, to their supervisor.

4. Immediately report to their supervisor any condition, practice or hazard which may cause injury to a worker or damage to equipment.
5. Wear, user and properly maintain personal protective equipment wherever required by their supervisor.
6. Be accountable for their own safety and work in a manner so as not to endanger fellow workers.

### **GENERAL SAFE PRACTICES**

1. All employees shall follow safe procedures, render every aid to safe operation and report all unsafe conditions or practices immediately to his foreman or supervisor.
2. Our foremen and supervisors are instructed to insist on employees obeying rules and regulations in order to promote good safety practices for the protection of the employees as is necessary to the safe conduct of the work. They will take such action as is necessary to enforce these instructions.
3. Ask your foreman or supervisor if you do not know how or are in doubt as to the safe way of doing your job.
4. Ignorance of safety rules and practices is no excuse for their violation.
5. Help the new or inexperienced employee by pointing out potential hazards which may arise from electrical sources, gases, chemicals, radiation, heat, slip and fall, etc.
6. Employees are to be alert and report any deficiency in the way of defective tools, equipment, guards or protective devices immediately to the foreman or superintendent.
7. Careful investigation as to possible danger to other persons is necessary before beginning any operation.
8. Horseplay, gambling or fighting will not be tolerated.
9. Anyone known to be under the influence of intoxicating liquor shall not be allowed on the job while in that condition.
10. Intoxicating beverages, firearms or other weapons must not be brought to the job any time.
11. Illegal possession or use of narcotics and/or non-prescribed tranquilizers or pep pills on company premises or project sites are forbidden.
12. Operate only the equipment you are authorized to use.
13. Before doing any climbing, inspect the soles of your shoes and clean them of any slippery substance such as mud or oil.
14. Do not use carbon tetrachloride for any purpose. Carbon TET vapors can be fatal if inhaled.
15. Caution should be used in handling injurious or poisonous substances. Follow special instruction from authorized sources regarding this matter.
16. Unless it's an emergency, running is prohibited.
17. Transistor radios and walkman radios are not to be allowed, used, or carried by any Terrafix personnel while in the field.

### **HOUSEKEEPING**

1. Our working areas are to be kept free from all unnecessary debris and waste material.
2. All scrap is to be removed and deposited in proper containers. Keep all materials piled neatly.

3. Bolts, nuts, etc. should be kept in containers or removed from the work area when no longer needed. During bolting operations continuous policing of the area should be a regular procedure.
4. All tools and other equipment are to be returned to their proper place after use.
5. Special attention is to be given to the removal and disposal of oily rags, paint cans and any container that may have held flammable liquids.
6. Eliminate the slipping and falling hazards caused by oil and liquid spillage by immediately wiping or spreading an absorbing material on the area.
7. Walkways, scaffolds and stairways must be kept clear of welding cords, hoses, small tools and equipment.
8. Change rooms and rest rooms must be kept clean. Place lunch bags, papers, drinking cups and other refuse in the container provided for their disposal.

### **FOR YOUR PERSONAL PROTECTION**

1. Employees should wear suitable personal clothing for the type of work they will be performing.
2. Loose or frayed clothing, finger rings, dangling ties, etc. should not be worn around moving machinery or other sources of entanglement.
3. All site workers must wear approved safety footwear. Unless instructed otherwise by his supervisor.
4. Approved hard hats will be worn by all employees and authorized visitors at all field locations outside the office area. No "bump caps," "baseball bean caps," etc, are allowed.
5. Suitable goggles and/or face shields shall be worn when welding, grinding, buffing, sanding, cutting, chipping, handling acids and caustics, and while working in locations where there is a possibility of injury to eyes or face.
6. Employees are not allowed to ride on running boards, fenders, side rails, tops of vehicles, extend legs over the side of any truck bed or stand up in the bed of any truck or vehicle while machine is in motion.
7. Compressed air is not to be used for blowing dust from body parts or clothing. Never point an open air hose at other persons.
8. When lifting, use the large muscles of your legs rather than the small muscles of your back. Take a firm grip, secure a good footing, place the feet a comfortable distance apart, keep the load close, keep your back straight, bend your knees and lift with your legs.
9. If the load is too heavy, get help. Don't strain.
10. Use safety belts and life lines when working from high places, as required by federal, provincial, or local safety regulations.

### **MATERIAL HANDLING**

1. Remember - in lifting, the safe way is the best and easiest way. The back and stomach muscles are easily injured and they bear most of the strain if lifting is done incorrectly.
2. Never use ropes, chains, or slings that are defective. Make sure all loads are centered in slings before lifting and use extreme care in removing slings from piled stock.
3. Don't stand under loads.

4. Don't ride loads.
5. Stand clear of any taut cables and lifting devices.

### **ELECTRICAL**

1. When working in or on energized substations, transmission lines, power plants, etc., accident prevention rules, procedures and regulations of our client are to be followed by all Terrafix Environmental U.S.A. Inc. employees.
2. Never make repairs to electrical equipment unless you know the proper manner of doing the work.
3. No electrical work should be done "hot" which can be done "cold".
4. Always respect electricity! It takes very little electric current to kill. If the contact is good for only an instant, 110 volts may kill, and there have been many cases where voltage as low as 60 or 70 volts have been fatal.
5. Metal ladders shall not be used for electrical work or where they may contact electrical conductors.

### **LADDERS & SCAFFOLDS**

1. Ladders are to be placed with care. The bottom of the ladder should be away from the wall and never more than one-fourth of the perpendicular height of the ladder.
2. A ladder should not be placed at a blind corner or a doorway where it could be displaced. If it is necessary to use a ladder in such places, the area is to be blocked off.
3. Ladders are not to be placed upon unstable objects such as boxes, loose lumber, etc. This is usually done to obtain additional height. A longer ladder should be obtained for this purpose.
4. Don't use a step ladder as a straight ladder.
5. Metal ladders are not to be used around electrical wiring or while working on or near electrical equipment.
6. Face the ladder when ascending or descending and use both hands.
7. Inspect the scaffolds and ladders on which you are to work to make certain they are safe and that they remain safe.
8. Any damage to scaffolds, false work or other supporting structures must be reported to the foreman.
9. Scaffold planks are to be carefully selected, tested and made secure to prevent slipping by using cleats, toeing or wiring.
10. Suitable handrails for personnel protection should be installed on all scaffolds.
11. As far as safety is concerned, there is no such thing as a "temporary scaffold". Build all scaffolds with safety in mind as the "temporary scaffold" many times is used for a longer time than originally anticipated.
12. Never overload a scaffold. Scaffolds should be designed and built to take the maximum material load that may be placed on them as well as the weight of the workmen.
13. Damaged or broken ladders shall be tagged, "Do Not Use" until the ladder has been repaired and tag removed.
14. Do not work from either of the top two rungs of any portable ladder.
15. All scaffolds must comply with the Provincial Regulations.
16. The ladder must extend at least one meter above the platform or excavation or resting surface.

## **HAND TOOLS**

1. Your job can be made safer and easier if (a) the right tool is selected for the job; (b) used in the right way; (c) properly maintained; (d) properly stored when not in use.
2. All portable electric hand tools should be grounded.
3. Inspect cords of electric tools regularly. Don't lay the cord on oily or chemically saturated floor. Never pull on the cord when it is kinked or pinched. Don't lift or lower the tool with the cord.
4. Don't use defective tools. Turn them in for repair or exchange.
5. All sharp edge tools should be kept sharp. They are safer and more efficient than dull ones.
6. Don't carry sharp or pointed tools in your pocket.
7. Tools are not to be left lying in elevated places, in walkways, aisles or stairways.

## **EQUIPMENT**

1. A piece of equipment is only as safe as the operator and the mechanic. Our equipment is built for safe, economical operation and long life, yet each piece is subject to intelligent use and maintenance.
2. Only experienced men are allowed to operate power equipment. Before being allowed to operate machinery or equipment the employee must prove by actual demonstration that he understands the operation.
3. Do not operate equipment in an unsafe condition. All operators should make a careful inspection of their equipment at the start of each shift.
4. Cleaning, oiling or repairing is not to be done on equipment while it is in operation unless special provisions have been made to do it safely with specific instructions from the supervisor and the complete knowledge of the operator.

## **FIRE PREVENTION**

1. All employees must take every precaution to prevent fire. Do not tamper with fire fighting equipment. Observe "No Smoking" rules. Use extra care when and where smoking is permitted.
2. The use of gasoline or other highly volatile material for starting fires is prohibited.
3. Gasoline is not to be used for cleaning purposes.
4. Appropriate closed containers are to be used for gasoline, kerosene, acids and similar fluids. Containers are to be plainly marked to indicate the character of the contents. The fuel storage area is a "No Smoking" area.
5. Ground all temporary gasoline storage tanks used in construction.
6. In case of fire: Keep calm. Report the fire immediately, giving the location, your name and telephone extension if applicable. Consider first the safety of all personnel, then direct attention to the saving of property.
7. Know where the fire extinguisher are located and how to operate them. After a fire extinguisher has been used, notify your foreman whose duty is to see that proper replacement is made promptly.

## **JOB INJURIES & SICKNESS**

1. All injuries, no matter how slight they may seem, must be reported to the proper representatives of Terrafox Environmental Technology Inc. (your foreman or office manager or preferably the first aid department) so that

arrangements can be made for medical or first aid treatment. If you must leave the job because of illness or injury (either industrial or nonindustrial) be sure to notify your supervisor before leaving.

2. Do not move an injured person unless it is necessary to do so in order to prevent further injury. Keep the injured as comfortable as possible and without delay send for the nurse, first aid attendant or other medical aid.
3. Haste in giving first aid is sometimes harmful. There are two instances when speed is necessary; (a) severe bleeding (b) artificial respiration.
4. Do not attempt to remove foreign particles from your eye or body or from the eye or body of others. Get qualified treatment from First Aid.
5. No one will knowingly be permitted or required to work while his ability or alertness is so impaired by fatigue, illness or other causes that it might necessarily expose himself or others to injury.

### **SITE TRANSPORT RULES**

1. No person shall drive a Site Vehicle unless he has a valid Driver's License and he is authorized to do so.
2. No vehicle shall be used during the hours of darkness unless it has suitable lights or the area is floodlit.
3. No driver shall alight from a vehicle unless he has ensured that it cannot accidentally move.
4. It is an offence to drive any Site Vehicles without due care and attention.
5. All drivers must inspect their vehicles at least once a day and any defects must be reported to the person in charge.
6. No vehicle shall be loaded in such a manner or to such an extent as to interfere with the safe driving and operation of the vehicle.
7. These rules and any signs erected around the site must be adhered to at all times.
8. No passengers are to be carried unless they are seated and in a secured position with no parts of their body protruding the vehicle.

### NOTES

†. Certified properties are tested once per lot, or once every 40,000 lbs of material (18,000 kg), whichever is more frequent. Tensile properties : 1" wide samples, 95 psi line pressure and 360 kgf (809 lbf) clamping force.

††. Index properties are tested once per formulation. A certified statement of the test results for the formulation is to be made available to the customer on request.

†††. Custom panel sizes are available and panel dimensions may vary  $\pm 1\%$ .

††††. Modifications or further details of test are described in PGI 1104 Appendix B or ASTM D 7176 standard.

\* The information contained herein is provided for reference purposes only and is not intended as a warranty of guarantee. Final determination of suitability for use contemplated is the sole responsibility of the user. SOLMAX assumes no liability in connection with the use of this information.

**PRODUCTS**

**HH-66 Vinyl Cement**

**S-18 Neoprene Cement**

**XL-8 Neoprene Cement**

**Duall-88 Neoprene Cement**

**Clear-Tite-HHR Neoprene Cement**

**HH-66 Vinyl Cement "More durable than the fabric itself"**

**HH-66 Vinyl Cement** is a superior quality, fast drying adhesive. It is used extensively for bonding vinyl coated and vinyl laminated fabrics to themselves or to various materials. HH-66 is also used to bond urethanes, vinyl foams and films, rigid plastics, synthetic fabrics, wood, leather, and metals. It is outstanding for sealing or waterproofing stitched seams.

HH-66 dries quickly with a very strong, yet flexible bond. It is not affected by weather and temperature extremes, and is highly resistant to oil, fuel, grease, and many other chemicals.

Application is by brush, roller, or squeeze bottle. Dried films may be reactivated to the tacky state by high heat or solvent.

**HH-66 is used widely in the manufacture and repair of:**

**Technical Data:**

|                    |                           |
|--------------------|---------------------------|
| Base:              | Thermoplasticelastomer    |
| Color:             | Clear                     |
| Solvent:           | MEK-Toluene-Acetone Blend |
| Viscosity:         | Medium, 1100-1300 cps.    |
| Application:       | Brush or Roller           |
| Solids:            | 15% ± 1% (Approximately)  |
| Net Weight:        | 8 Lbs. (Approximately)    |
| Temperature Range: | -30° to 180°F.            |
| Tack Life:         | 2 – 5 minutes             |
| Shelf Life:        | 18 months or longer       |
| Flash Point:       | 22° F.                    |

**Precautions:**

**Danger – Flammable Mixture.**  
**Do Not Use Near Fire or Flame.**  
**Use with Adequate Ventilation.**  
**Vapor May Cause Flash Fire.**  
**Avoid Prolonged Breathing of Vapor and Contact With Eyes and Skin.**

# MATERIAL SAFETY DATA SHEET

NSN: 8040013401575

Manufacturer's CAGE: 25592

Part No. Indicator: C

Part Number/Trade Name: HH-66 VINYL CEMENT

## General Information

Company's Name: R-H PRODUCTS CO INC

Company's Street: 308 OLD HIGH ST

Company's P. O. Box: 2301

Company's City: ACTON

Company's State: MA

Company's Country: US

Company's Zip Code: 01720

Company's Emerg Ph #: 800-535-5053

Company's Info Ph #: 508-897-8000

Record No. For Safety Entry: 002

Tot Safety Entries This Stk#: 002

Status: SMJ

Date MSDS Prepared: 03OCT94

Safety Data Review Date: 18OCT96

MSDS Serial Number: CCQVK

## Ingredients/Identity Information

Proprietary: NO

Ingredient: 2-BUTANONE; (METHYL ETHYL KETONE) (SARA 313) (CERCLA)

Ingredient Sequence Number: 01

Percent: 52

NIOSH (RTECS) Number: EL6475000

CAS Number: 78-93-3

OSHA PEL: 200 PPM

ACGIH TLV: 200 PPM; 300 STEL

Proprietary: NO

Ingredient: ACETONE (SARA 313) (CERCLA) BP: 132F,56C

Ingredient Sequence Number: 02

Percent: 18

NIOSH (RTECS) Number: AL3150000

CAS Number: 67-64-1

OSHA PEL: 1000 PPM

ACGIH TLV: 750 PPM; 1000 STEL

Proprietary: NO

Ingredient: TOLUENE (SARA 313) (CERCLA)

Ingredient Sequence Number: 03  
Percent: 15  
NIOSH (RTECS) Number: XS5250000  
CAS Number: 108-88-3  
OSHA PEL: 200 PPM  
ACGIH TLV: 50 PPM, S

=====

Physical/Chemical Characteristics

=====

Appearance And Odor: CLEAR; FRAGRANT MINT-LIKE ODOR, SHARP.  
Boiling Point: 132F,56C  
Vapor Pressure (MM Hg/70 F): 180 @ 68F  
Vapor Density (Air=1): HVR/AIR  
Specific Gravity: SUPDAT  
Evaporation Rate And Ref: SLOWER (BUTYL ACETATE=1)  
Solubility In Water: INSOLUBLE

=====

Fire and Explosion Hazard Data

=====

Flash Point: 6F,-14C  
Flash Point Method: TCC  
Lower Explosive Limit: 1%  
Upper Explosive Limit: 12%  
Extinguishing Media: FOAM, DRY CHEMICAL, CARBON DIOXIDE.  
Special Fire Fighting Proc: USE NIOSH APPROVED SCBA AND FULL PROTECTIVE EQUIPMENT (FP N).  
Unusual Fire And Expl Hazrds: EXTREMELY FLAMMABLE. OVERHEATED, CLOSED CONTAINER NEAR TO FIRE COULD EXPLODE DUE TO PRESSURE BUILDUP.

=====

Reactivity Data

=====

Stability: YES  
Cond To Avoid (Stability): NOT APPLICABLE.  
Materials To Avoid: STRONG OXIDIZING AGENTS.  
Hazardous Decomp Products: CARBON DIOXIDE AND CARBON MONOXIDE WHEN SUBJECTED TO FLAMES OR EXCESSIVE HEAT.  
Hazardous Poly Occur: NO  
Conditions To Avoid (Poly): NOT RELEVANT

=====

Health Hazard Data

=====

LD50-LC50 Mixture: NONE SPECIFIED BY MANUFACTURER.  
Route Of Entry - Inhalation: YES  
Route Of Entry - Skin: YES  
Route Of Entry - Ingestion: YES  
Health Haz Acute And Chronic: TOLUENE APPEARS ON THE NAVY LIST OF OCCUP

CHEM REPRO HAZS. SEEK CONSULTATION FROM APPROP HLTH PROFESSIONALS CONCERNING LATEST HAZ LIST INFO & SAFE HNDLG & EXPOS INFO (FP N). EYES: LIQ MILDLY IRRIT. OVEREXP MAY ALSO CAUSE IRRIT. REDNESS, TEARING & SWELLING. SKIN: DRYNESS OF SKIN INCLUDING CRACKING. (EFTS OF OVEREXP)

Carcinogenicity - NTP: NO

Carcinogenicity - IARC: NO

Carcinogenicity - OSHA: NO

Explanation Carcinogenicity: NOT RELEVANT

Signs/Symptoms Of Overexp: HLTH HAZ: PRLNGD CNTCT CAN CAUSE DEFATTING & POSS DERMATITIS. INHAL: OVEREXP MAY CAUSE IRRIT TO RESP SYS INCLUDING DIZZINESS, HEADACHE, NAUSEA & LT HEAD. EXTREME OVEREXP TO VAPS COULD RESULT

IN CNS, LIVER & KIDNEY DAMAGE. INGEST: MAY CAUSE GI IRRIT. ASPIRATION INTO LUNGS AS RESULT OF VOMITING MAY CAUSE LUNG DAMAGE.

Med Cond Aggravated By Exp: SKIN:PRLNGD CNTCT WILL DEFAT SKIN & CAUSE DERM. INHAL:EXTREME OVEREXP OF TOLUENE VAPS MAY CAUSE NERVS SYS DMG. INGEST: NAUS, VOMIT & DIARR. ASPIR INTO LUNGS AS RSLT OF VOMIT MAY CAUSE LUNG DMG.

Emergency/First Aid Proc: EYES: FLUSH IMMEDIATELY WITH WATER FOR AT LEAST 15 MINUTES. CALL MD. SKIN: WASH AREA WITH SOAP AND WATER. INHAL: MOVE AFFECTED PERSON TO FRESH AIR AT ONCE. RESTORE BREATHING. CALL MD IF DIFFICULTIES PERSIST. INGEST: DO NOT INDUCE VOMITING. CALL MD. GIVE WATER TO VICTIM. IF VOMITING OCCURS, PREVENT ASPIRATION INTO LUNGS.

=====

#### Precautions for Safe Handling and Use

=====

Steps If Matl Released/Spill: EXTINGUISH ALL SOURCES OF IGNITION IN AREA. COLLECT SPILLED MATERIAL AND PLACE IN A CLOSED CONTAINER FOR DISPOSAL OR SALVAGE.

Neutralizing Agent: NONE SPECIFIED BY MANUFACTURER.

Waste Disposal Method: DISPOSE IN ACCORDANCE WITH FEDERAL, STATE AND LOCAL REGULATIONS. EPA HAZARDOUS WASTE NUMBER: D035 (IGNITABLE).

Precautions-Handling/Storing: KEEP AWAY FROM HEAT, OPEN FLAMES & SPARKS.

USE & STORE WITH ADEQUATE VENTILATION TO PREVENT VAPOR BUILDUP. VAPORS RELEASED BY PROD CAN EASILY IGNITE.

Other Precautions: AVOID CONTACT WITH SKIN AND EYES. AVOID PROLONGED BREATHING OF VAPORS. KEEP CONTAINER CLOSED WHEN NOT IN USE. KEEP OUT OF REACH OF CHILDREN.

=====

#### Control Measures

=====

Respiratory Protection: IF EXPOSURE EXCEEDS OCCUPATIONAL EXPOSURE LIMITS, USE A NIOSH APPROVED RESPIRATOR TO PREVENT OVEREXPOSURE. PER 29 CFR 1910.134. NIOSH APPROVED CCROV OR SA TYPES RECOMMENDED.

Ventilation: LOC EXHST & MECH (GEN) SHOULD BE USED TO MAINTAIN EXPOS BELOW TLV(S). EXPLO PROOF VENT MAY BE REQD TO CTL VAP CONCS.

Protective Gloves: IMPERVIOUS GLOVES (FP N).  
Eye Protection: ANSI APPRVD CHEM WORKERS GOGGLES (FP N).  
Other Protective Equipment: ANSI APPROVED EYE WASH & DELUGE SHOWER (FP N).  
WORK APRON TO AVOID CONTACT WITH PERSONAL CLOTHING AND SKIN.  
Work Hygienic Practices: KEEP AREA CLEAN. WASH HANDS THOROUGHLY AFTER  
WORKING WITH PRODUCT.  
Suppl. Safety & Health Data: SPEC GRAV: 0.78-0.88 (H\*2O=1).

Tom,

NHESP approved the proposed warm season seed mix for the shepley cutoff wall restoration, with one minor exception (delete Lance-leaved coreopsis)

They also had some comments on the standard New England Wetland Plant (NEWP) seed mixes recommended for sloped dry areas and wet areas. Please try to meet these requests, if possible. If NEWP can't supply the modified mixes without a big hassle, just go with their standard mix.

Thanks

Mike.

Subject: RE: Shepley (NHESP 12-31152) - Following Up

Mike,

Great, looks like we have a plan. I have prepared a comment letter memorializing the approach we have discussed, including restoration of upland areas after disturbance (with warm season grasses, to the extent possible) and monitoring of the barrier wall area (so as to inform future restoration phases). We should be able to issue this next week.

Thanks, also, for forwarding along the seed mix for our review. Upon review of the proposed list, our botanist identified the following species as non-native (introduced). If possible, it would be great to adjust the planting list so as to remove these species, or as many of them as practicable; New England Wetland Plants should be able to easily adjust the mixes, but please let me know if this becomes problematic. Would it also be possible to quickly update the restoration plan (noting the deletions, below, or whatever ends up being practicable after speaking with the seed company) and resend? I would like to attach the final restoration plan to our letter, if possible.

Warm Season Grass Mix: Lance-leaved coreopsis. All other species okay.

Mix for Dry Sites: *Lolium multiflorum*, *Lolium perenne*, and *Bouteloua gracilis*. Additionally, it would be great to use the native subspecies of

*Festuca rubra*, if possible. All other species okay.

Mix for Wet Sites: As above, it would be great to use the native subspecies of *Festuca rubra*, if possible. All other species okay.

Thanks again for your help and work on this.

. Jesse

Jesse,

The approach you outline sounds fine. We would be willing to monitor the site post seeding to see how things go. The Plow Shop Pond work is not currently funded...will know in February if it will be done in 2013. The Round House work is on hold. They were unable to dewater the work area. A plan is being developed to address this issue (involves partial draining of the pond) and I will send that along in a separate communication. We would be willing to submit restoration plans for Red Cove and Round House work in advance for your review and approval. A link to the New England Wetland Plants mix is attached.

Thanks

Mike

Hi Mike,

Thanks very much for forwarding this along, and my apologies for the delayed response on my end. We actually moved offices over the last two weeks but are finally up and running after a very hectic period. But generally, the habitat restoration plan looks great. I will need to run the seed mixture by our botanist for review (just to be sure that all are native); toward this end, can you please forward the seed mixture for the dry site mix as soon as possible? I will forward this, plus the plan, directly to our botanist for review.

Additionally, it would be helpful to include the proposed timing for the Round House and Red Cove projects (in the restoration plan you sent). Given that we are looking to assess performance of this initial restoration so as to inform restoration for the future projects/phases, it would also be helpful to explicitly state how/when restoration success will be assessed; this can be qualitative in nature, I think, but I would appreciate your thoughts on how to make this more explicit in the plan.

I would anticipate, in our comment letter, requesting that restoration plans be submitted for review prior to restoration of future phases, which would enable us to incorporate lessons from this restoration into future plans.... does this seem like an appropriate approach from your perspective?

Many thanks,

... Jesse

Jesse,

Please find attached a proposed restoration plan for areas that are being disturbed during installation of the Shepley Landfill cut-off wall. About 1.2 acres along the edge of the landfill need to be restored this fall.

Depending on how it performs, the proposed warm season mix could also be used to restore upland areas disturbed by the other two projects in subsequent years. The round house project is on hold because of construction difficulties and the Red Cove work is currently not funded.

Thanks

Mike

## Shepley Landfill – Cutoff Wall Area Restoration

### Existing Restoration Plan

Based on review of 90% Plans and Specs the contractor is required to install 4" of topsoil (1.5 to 20% organic content) obtained from offsite (Section 2260). The specs don't seem to include a permanent seed mix; Section 2370 mentions use of annual and winter rye for temporary cover. In an email dated September 4, 2012 use of New England Erosion/Restoration Mix (for dry sites) and New England Erosion/Restoration Mix (for detention basins and moist sites) is recommended.

### New England District Recommended Restoration Plan

- 1) Prepare subsoil as described in Section 2260.
- 2) Top-dress with 4 inches of sandy subsoil material already stockpiled on site (a moderate number of small (< 6") rocks can be tolerated). Do not apply topsoil.
- 3) In flat dry areas broadcast warmseason grass seed mix (see below) Track seed into surface soil using a small to medium sized tracked vehicle such as a bobcat (2 passes, 100% coverage each pass). Seed between October 15 and November 15.
- 4) Hydroseed any dry sloped areas which may be prone to erosion with New England Erosion/Restoration Mix (for Dry sites). If slopes are greater than 3:1, install topsoil and use matting. Matting should be wildlife friendly (i.e. free of poly mesh netting).
- 5) Hydroseed or broadcast seed any swales or wet areas with New England Erosion/Restoration Mix (for detention basins and moist sites). Install wildlife friendly matting in swales as needed to control erosion.

Notes:

- 1) Technical Drilling Services of Sterling, M/
- 2) Hollow Stem Auger

Key:

- Cement
- Native Backfill Material
- Grout
- Bentonite
- Sand

Remarks: 1) Stratification lines represent approximate boundaries between soil types and the transition may be gradual. Water level readings have been completed at times and under conditions stated. Fluctuations of groundwater may occur due to factors other than those present at the time measurements were made.  
2) Sample is designated as either "C" for composite or "GS" for a discrete grab sample.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Sand                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                              |                |                                                                                                                                                                                                                                             |            |             |                          |           |           |                 |                |          |            |             |                                                                                |   |                    |       |                                                                                                                         |         |                      |                                           |   |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |  |       |         |    |   |    |  |  |  |  |  |  |    |  |       |       |         |    |   |    |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |       |       |         |    |   |    |  |  |  |  |  |  |    |  |       |       |         |    |   |    |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |  |       |         |    |   |    |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |                                                                        |                                                                                                                                                                                                                                                                |                                                                              |                                                                                                           |                                                              |                                                              |                                                      |  |  |  |  |  |  |  |  |  |  |
| Remarks: 1) Stratification lines represent approximate boundaries between soil types and the transition may be gradual. Water level readings have been completed at times and under conditions stated. Fluctuations of groundwater may occur due to factors other than those present at the time measurements were made.<br>2) Sample is designated as either "C" for composite or "GS" for a discrete grab sample.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                              |                |                                                                                                                                                                                                                                             |            |             |                          |           |           |                 |                |          |            |             |                                                                                |   |                    |       |                                                                                                                         |         |                      |                                           |   |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |  |       |         |    |   |    |  |  |  |  |  |  |    |  |       |       |         |    |   |    |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |       |       |         |    |   |    |  |  |  |  |  |  |    |  |       |       |         |    |   |    |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |  |       |         |    |   |    |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |                                                                        |                                                                                                                                                                                                                                                                |                                                                              |                                                                                                           |                                                              |                                                              |                                                      |  |  |  |  |  |  |  |  |  |  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Sand                                                                |                                                                                                                                                                                                                              |                |                                                                                                                                                                                                                                             |            |             |                          |           |           |                 |                |          |            |             |                                                                                |   |                    |       |                                                                                                                         |          |                      |                                           |   |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |      |       |         |    |   |    |  |  |  |  |  |  |    |  |      |       |          |    |   |    |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |      |       |         |    |   |    |  |  |  |  |  |  |    |  |       |       |         |    |   |    |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |       |       |           |    |   |    |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |                                                                                                                         |  |                                                                                                                |  |                                                                                                              |  |                                                                                           |  |                                                                                |  |                                                                               |  |                                                                                                                                                                                                                                                                                                                                                                                           |  |  |                                                                     |  |                        |  |                    |  |                        |  |                                                                    |
| Remarks: 1) Stratification lines represent approximate boundaries between soil types and the transition may be gradual. Water level readings have been completed at times and under conditions stated. Fluctuations of groundwater may occur due to factors other than those present at the time measurements were made.<br>2) Sample is designated as either "C" for composite or "GS" for a discrete grab sample.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                     |                                                                                                                                                                                                                              |                |                                                                                                                                                                                                                                             |            |             |                          |           |           |                 |                |          |            |             |                                                                                |   |                    |       |                                                                                                                         |          |                      |                                           |   |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |      |       |         |    |   |    |  |  |  |  |  |  |    |  |      |       |          |    |   |    |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |      |       |         |    |   |    |  |  |  |  |  |  |    |  |       |       |         |    |   |    |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |       |       |           |    |   |    |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |                                                                                                                         |  |                                                                                                                |  |                                                                                                              |  |                                                                                           |  |                                                                                |  |                                                                               |  |                                                                                                                                                                                                                                                                                                                                                                                           |  |  |                                                                     |  |                        |  |                    |  |                        |  |                                                                    |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Sand                                                                                                            |                                                                                                                                                                                                                              |                |                                                                                                                                                                                                                                             |            |             |                          |           |           |                 |                |          |            |             |                                                                                |   |                    |      |                                                                                                                         |         |                      |                                           |   |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |      |       |         |    |   |    |  |  |  |  |  |  |    |  |       |       |         |    |   |    |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |      |       |         |    |   |    |  |  |  |  |  |  |    |  |       |       |          |    |   |    |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |       |       |  |    |   |    |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |                                                                                               |  |                                                                                          |  |                                                                      |  |                                                                            |  |                                                                                                                 |  |                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                           |  |  |                                                                     |  |                        |  |                    |  |                        |  |                                                                    |
| Remarks: 1) Stratification lines represent approximate boundaries between soil types and the transition may be gradual. Water level readings have been completed at times and under conditions stated. Fluctuations of groundwater may occur due to factors other than those present at the time measurements were made.<br>2) Sample is designated as either "C" for composite or "GS" for a discrete grab sample.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                 |                                                                                                                                                                                                                              |                |                                                                                                                                                                                                                                             |            |             |                          |           |           |                 |                |          |            |             |                                                                                |   |                    |      |                                                                                                                         |         |                      |                                           |   |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |      |       |         |    |   |    |  |  |  |  |  |  |    |  |       |       |         |    |   |    |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |      |       |         |    |   |    |  |  |  |  |  |  |    |  |       |       |          |    |   |    |  |  |  |  |  |  |    |  |  |  |  |  |  |    |  |       |       |  |    |   |    |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |                                                                                               |  |                                                                                          |  |                                                                      |  |                                                                            |  |                                                                                                                 |  |                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                           |  |  |                                                                     |  |                        |  |                    |  |                        |  |                                                                    |

Notes:

- 1) Technical Drilling Services of Sterling, M/
- 2) Hollow Stem Auger
- 3) Set well at 35' bgs since well casing began to rise as auger casing was pulled out of the ho
- 4) Did not collect a 35-37' split spoon sample to avoid hole collapse, anticipated to set well at 36' bgs

Remarks:

- 1) Stratification lines represent approximate boundaries between soil types and the transition may be gradual. Water level readings have been completed at times and under conditions stated. Fluctuations of groundwater may occur due to factors other than those present at the time measurements were made.
- 2) Sample is designated as either "C" for composite or "GS" for a discrete grab sample.

| Key: |  | Cement                   |
|      |  | Native Backfill Material |
|      |  | Grout                    |
|      |  | Bentonite                |
|      |  | Sand                     |

Remarks: 1) Stratification lines represent approximate boundaries between soil types and the transition may be gradual. Water level readings have been completed at times and under conditions stated. Fluctuations of groundwater may occur due to factors other than those present at the time measurements were made.  
2) Sample is designated as either "C" for composite or "GS" for a discrete grab sample.

| Remarks: 1) Stratification lines represent approximate boundaries between soil types and the transition may be gradual. Water level readings have been completed at times and under condions stated. Fluctuations of groundwater may occur due to factors other than those present at the time measurements were made.<br>2) Sample is designated as either "C" for composite or "GS" for a discrete grab sample. |                    |                                                                                                                                                                                                                                                       |                |                                                                                                                                                                                                              |            |                                                                                                              |                                                                                                                                        |                                                                                      |                                                                     |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |        |    |           |    |

  ## Material Shipping Record & Log

For the shipment of contaminated soil, urban fill, and dredge materials not subject to management under section 310 CMR 40.0035 nor manifesting under 310 CMR 30.000

Tracking Number

### A. Location Information

**Important:**  
When filling out forms on the computer, use only the tab key to move your cursor - do not use the return key.

1. Provide the following information on the location where the waste was generated:

Release name (optional) Shepley's Hill Landfill - Remier Wall Construction

Street Cook Street

City/Town Devens

Location aid

State MA

Zip code 01434

2. Date/Period of generation:

From 8-20-12

To 9-14-12

3. U.S. EPA ID number:

MA7210025154

4. 21E release:

☐ Yes

☒ No

5. List additional tracking documents associated with this document:

### B. Generator Information

1. Provide the following generator information:

Name of organization Department of the Army - Former Ft. Devens Installation

Contact name Robert Simone

Title BRAC Environmental Coordinator

Street address 30 Quebec Street

City/Town Devens

State MA

Zip code 01434

Telephone number(including extension)

(978) 796-2205

### C. Owner and/or Operator Information

1. If the owner and/or operator is different from the generator as indicated in Section B, provide the following information:

Check applicable: ☐ owner ☐ operator

Name of organization

Contact name

Title

Street address

City/Town

State

Zip code

Telephone number

Ext.

**Important:**  
This form is not to be used for the shipment of remediation wastes subject to management under section 310 CMR 40.0035 of the Massachusetts Contingency Plan nor is it to be used in lieu of a hazardous waste manifest for hazardous waste or recyclable materials subject to the Massachusetts Hazardous Waste Regulations 310 CMR 30.000.

Massachusetts Department of Environmental Protection  
Bureau of Waste Prevention

## Material Shipping Record & Log

For the shipment of contaminated soil, urban fill, and dredge materials not subject to management under section 310 CMR 40.0035 nor manifesting under 310 CMR 30.000

Tracking Number \_\_\_\_\_

### D. Transporter/Common Carrier Information

1. Provide the following information:

Goulet Trucking Inc.  
Transporter/Common carrier name

N/A  
Hazardous waste license number (if applicable)

MA  
Licensing state (if applicable)

Paul Jordan  
Contact person

T+D Coordinator  
Title

### F. Description of Material

Check all that apply:

1. a. ☐ soil ☐ dredge material ☐ fill

b. Description: \_\_\_\_\_

c. Classification: ☐ MIT ☐ USDA ☐ USAEC ☐ ASEE

2. ☒ Other(describe): Municipal Solid Waste

3. Type of contamination:

- a. ☐ gasoline ☐ diesel fuel ☐ #2 oil ☐ #4 oil  
☐ #6 oil ☐ waste oil ☐ kerosene ☐ jet fuel

b. ☒ Debris:

☒ demolition ☐ vegetative ☐ inorganic

c. ☐ Other(describe): \_\_\_\_\_

4. Constituents of concern (check all that apply):

- |                                        |                                                 |
|----------------------------------------|-------------------------------------------------|
| <input checked="" type="checkbox"/> As | <input type="checkbox"/> HVOCs                  |
| <input type="checkbox"/> Cd            | <input type="checkbox"/> PATH                   |
| <input checked="" type="checkbox"/> Cr | <input type="checkbox"/> VOCs                   |

## Material Shipping Record & Log

For the shipment of contaminated soil, urban fill, and dredge materials not subject to management under section 310 CMR 40.0035 nor manifesting under 310 CMR 30.000

Tracking Number \_\_\_\_\_

### F. Description of Material (cont.)

7. Estimated volume of materials:

25 Cubic yards      \_\_\_\_\_ Tons      \_\_\_\_\_ Other(specify units)

8. Contaminant source (check one):

- ☐ transportation accident  
☐ lost  
☒ other(describe): Former Landfill

9. Indicate which waste characterization support documentation is attached:

- ☒ site history information  
☐ sampling and analytical methods/procedure  
☒ laboratory data  
☐ field screening data

If supporting documentation is not appended, provide an attachment stating the date and in connection with what document such information was previously submitted to the facility.

### G. Qualified Environmental Professional Opinion

"I have personally examined and am familiar with the information contained on and submitted with this form. Based on this information, it is my opinion that the testing and assessment actions undertaken were adequate to characterize the waste, and that the facility or location can accept wastes with the characteristics described in this submittal. I am aware that significant penalties including, but not limited to, possible fines and imprisonment may result if I willfully submit information which I know to be false, inaccurate, or materially incomplete."

## Hydraulic Conductivity of Saturated Porous Materials Using a Flexible Wall Permeameter by ASTM D 5084 Constant Volume

Sample Type:

Remolded

Permeant Fluid:

De-aired Distilled water

Orientation:

Vertical

Cell #:

16/5/11

Sample Preparation:

Test specimen compacted with moderate effort at the as-received moisture content . Trimmings moisture content = 31.5%

| Parameter               | Initial | Final |
|-------------------------|---------|-------|
| Height, in              | 2.74    | 2.48  |
| Diameter, in            | 2.85    | 2.71  |
| Area, in <sup>2</sup>   | 6.38    | 5.77  |
| Volume, in <sup>3</sup> | 17.5    | 14.3  |
| Mass, g                 | 525     | 483   |
| Bulk Density, pcf       | 114     | 128   |
| Moisture Content, %     | 31.3    | 20.8  |
| Dry Density, pcf        | 86.9    | 106   |
| Degree of Saturation, % | ---     | 99    |

### B COEFFICIENT DETERMINATION

Comments:

Estimate of seam separation visually determined based upon area of separated bond to the nearest 5%.

Shear test halted for HDPE and LMDPE materials once specimen has elongated 50%.

Shear test halted for PVC, fPP, LLDPE, VFPE and VLDPE once specimen has elongated past machine capacity.

Rupture mode for specimens with >50% elongation (HDPE and LMDPE) or > machine capacity (PVC, fPP, LLDPE, VFPE and VLDPE) interpreted as occurring in the membrane that exhibits yielding.

Notes: These results apply only to the sample tested for the specific test conditions. The test procedures employed follow accepted industry practice and the indicated test method. GeoTesting Express has no specific knowledge as to conditioning, origin, sampling procedure or intended use of the material.

| 5               | 18            | 100%               | AD           | ---    | ---                | ---          | 57             | 500%          | both         |
| Average         | 25            | ---                | ---          | ---    | ---                | ---          | 55             | ---           | ---          |

Comments: Estimate of seam separation visually determined based upon area of separated bond to the nearest 5%.

Shear test halted for HDPE and LMDPE materials once specimen has elongated 50%.  
Shear test halted for PVC, fPP, LLDPE, VFPE and VLDPE once specimen has elongated past machine capacity.

Rupture mode for specimens with >50% elongation (HDPE and LMDPE) or > machine capacity (PVC, fPP, LLDPE, VFPE and VLDPE) interpreted as occurring in the membrane that exhibits yielding.

Notes: These results apply only to the sample tested for the specific test conditions. The test procedures employed follow accepted industry practice and the indicated test method. GeoTesting Express has no specific knowledge as to conditioning, origin, sampling procedure or intended use of the material.

Took photo documentation of post abandonment of EPA RSK piezometers along the barrier wall alignment and work platform areas. Photo IDs: 072512-01 through -04.<br><br>Drillex: Condcuted abandonment of EPA piezometers RSK-26,-29,-30 and -33. RSK-26,-30 and -30 were unable to be completely removed from the subsurface. RSK-26 and -30 were cut approximately 1 foot below grade surface. RSK-33 was removed down to 5 feet below grade surface by removing the first 5 feet of casing. RSK-29 was able to be removed completely from the subsurface. All piezometers were grouted to surface with Portalnd Cement.<br><br>Materials Brought on Site:<br><br>Type I/II Portland Cement<br><br><b>Safety Inspection / Safety Meetings:</b><br>Tailgate Safety Meeting held prior to start of day's work activities.
