**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Conducted site prep. and mobilization. Continued construction of working platform.

**Activities in Progress (List by Activity Number)**  
 DFW: Mobilization / Site Preparation in progress  
 DFW: Construction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Moretrench conducted on-site preliminary QC testing on slurry being mixed in tanks to ensure correct mixture amounts to ensure all specifications will be met at the commencement of trench excavation activities.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress encountered during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided oversight and on-site QC of Moretrench. Conducted photographic documentation of delivery imported backfill borrow and final lay-down area set-up. Photograph IDs: 081012-01 and 081012-02.

Moretrench: Continued mixing slurry and filling tanks. Milton Cat/Astro Crane began assembly of excavator long stick. Miscellaneous fittings installed on tanks and water line. Continued construction of first 300 feet of working platform. Began stockpiling fill material using excavator to mine existing on-site soil stockpile for use in construction of the working platform.  
 General site clean-up.

Materials Brought on Site:

No additional material brought on-site during the day.

Equipment Brought on Site:

Long stick and boom  
 Terex Crane (T340 -1XL)  
 Northstar Scissor Lift  
 Extra hoses and fittings.

**Verbal Instructions given by Government:**  
 No verbal instruction given by the government during the day.

**Safety Inspection / Safety Meetings:**  
 Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's reviewed prior to start of work activities.

Lift Worksheet completed prior to commencement of crane pick of long stick and boom.  
 All lifting materials and apparatus were inspected prior to use.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 Moretrench - Continued construction of working platform.

**Activities in Progress (List by Activity Number)**  
 DFW: Soil/ Bentonite Wall Construction

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Moretrench continued on-site QC testing on slurry being mixed in tanks to ensure correct mixture amounts to ensure all specifications will be met at the commencement of trench excavation activities. AMEC oversaw all QC testing to confirm it was completed properly and all results were within the acceptable range.

Testins Included:

|                          |                   |
|--------------------------|-------------------|
| Test                     | Time Conducted    |
| Viscosity-Initial        | 819 & 1238        |
| Viscosity- In trench     | 930, 1405 & 1649  |
| Density- Initial         | 824 & 1241        |
| Density- In trench       | 933, 1407 & 1653  |
| Filtrate Loss- Initial   | 905 & 1312        |
| Filtrate Loss- In trench | 1008, 1438 & 1720 |
| PH- Initial              | 826 & 1243        |

All test results were within acceptable ranges laid out in site Quality Control Plans

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress encountered during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided oversight and on-site QC of Moretrench. Photographed progress as trench advanced. Photograph IDs: 081612-01 and 0811612-16.

Moretrench: Continued mixing slurry and filling tanks. Began mixing backfill with mixing excavator. Completed Trench from 0+00 to 0+30.

End of day depths:

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil/ Bentonite Wall Construction  
 Construction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. AMEC provided oversight of all field QC testing to confirm testing was completed properly as per project specification and all results were within the acceptable ranges.

On-site QC Testing Performed:

Bentonite Slurry:

| Test                     | Time Conducted    |
|--------------------------|-------------------|
| Viscosity-Initial        | 0834 & 1239       |
| Viscosity- In trench     | 0934, 1405 & 1650 |
| Density- Initial         | 0837 & 1241       |
| Density- In trench       | 0937, 1406 & 1653 |
| Filtrate Loss- Initial   | 0909 & 1312       |
| Filtrate Loss- In trench | 1008, 1441 & 1721 |
| pH- Initial              | 0826 & 1243       |

All test results were with in acceptable as specified in project specifications and project Quality Controll Plans.

Soil-Bentonite Backfill:

| Test    | Time Conducted |
|---------|----------------|
| Slump   | 0812           |
| Density | 0845 &1334     |

All test results were with in acceptable as specified in project specifications and project Quality Controll Plans.

Sample collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content.

Backfill Slope soundings conducted at stations at the start and end of the work shift.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Oder during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress encountered during the day.

**General Comments:**

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Contruction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within the acceptable ranges.

On-site QC Testing Performed:

Bentonite Slurry:

|                          |                   |
|--------------------------|-------------------|
| Test                     | Time Conducted    |
| Viscosity-Initial        | 1250 & 1454       |
| Viscosity- In trench     | 0849, 1015 & 1530 |
| Density- Initial         | 1253 & 1456       |
| Density- In trench       | 0851, 1018 & 1534 |
| Filtrate Loss- Initial   | 1324 & 1528       |
| Filtrate Loss- In trench | 0921, 1048 & 1605 |
| pH- Initial              | 1256 & 1500       |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

|         |                |
|---------|----------------|
| Test    | Time Conducted |
| Slump   | 0832 & 1145    |
| Density | 0845 & 1245    |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content.

Backfill Slope soundings conducted at stations at the start and end of the work shift.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Oder during the day.

**Were there any Delays in Work Progress today?**  
 No delays in work progress encountered during the day.

**General Comments:**

| <p>Work Completed During the Day:</p> <p>Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mizing as trench advanced. Photo IDs: 082012-01 through 082012-12.</p> <p>AMEC: Provided oversight of on-site QC testing performed by Moretrench and trench exvcavation activities. Also made final determination of trench depths and if refusal criteria had been met at each 10 foot station.</p> <p>Moretrench: Continued mixing slurry and filling tanks. Continued backfill mixing with excavator. Completed excavation of trench from 0+70 to 1+70. Backfilled trench with 2 1/4 batches of backfill (220 cy). Backfill complete at station 0+30 and present at approximately station 1+20 at end of the shift. Performed all required on-site QC testing.</p> <p>Final Trench Depths at 10 foot stations during the day:</p> <table border="1"> <thead> <tr> <th>Station</th> <th>Final Trench Depth</th> </tr> </thead> <tbody> <tr><td>0+70</td><td>30.2'</td></tr> <tr><td>0+80</td><td>23.8'</td></tr> <tr><td>0+90</td><td>22.7'</td></tr> <tr><td>1+00</td><td>20.5'</td></tr> <tr><td>1+10</td><td>21.8'</td></tr> <tr><td>1+20</td><td>22.8'</td></tr> <tr><td>1+30</td><td>23.1'</td></tr> <tr><td>1+40</td><td>24.3'</td></tr> <tr><td>1+50</td><td>25.4'</td></tr> <tr><td>1+60</td><td>25.2'</td></tr> <tr><td>1+70</td><td>27.0'</td></tr> </tbody> </table> <p>Materials Brought on Site:</p> <p>No additional material brought on-site during the day.</p> <p>Equipment Brought on Site:</p> <p>No additional equipment brought on-site during the day.</p> <p><b>Verbal Instructions given by Government:</b></p> <p>No verbal instruction given by the government during the day.</p> <p><b>Safety Inspection / Safety Meetings:</b></p> <p>Tailgate Safety Meeting held prior to start of day's work activities. **QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Contruction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Initial Inspection for DFW: Soil-Bentonite Wall Construction and Preparatory Meeting for DFW: On-site Stockpiling of Excess Soil Materials held during the day.

All imported borrow backfill material brought on site during the day inspected upon arrival. No physical defecencies noted.

Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges.

On-site QC Testing Performed:

Bentonite Slurry:

| Test                     | Time Conducted    |
|--------------------------|-------------------|
| Viscosity-Initial        | 0845 & 1454       |
| Viscosity- In trench     | 0849, 1106 & 1540 |
| Density- Initial         | 0853 & 1456       |
| Density- In trench       | 0853, 1108 & 1544 |
| Filtrate Loss- Initial   | 0924 & 1528       |
| Filtrate Loss- In trench | 0931, 1140 & 1607 |
| pH- Initial              | 0900 & 1500       |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

| Test    | Time Conducted     |
|---------|--------------------|
| Slump   | 0834, 1145, & 1439 |
| Density | 0853, 1200, & 1451 |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content.

Backfill Slope soundings conducted at stations at the start and end of the work shift.  
 Current trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Oder during the day.

| <p><b>Were there any Delays in Work Progress today?</b><br/>         No delays in work progress encountered during the day.</p> <p><b>General Comments:</b><br/>         Work Completed During the Day:</p> <p>Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mizing as trench advanced. Photo IDs: 082112-01 through 082112-14.</p> <p>AMEC: Provided oversight of on-site QC testing performed by Moretrench and trench exvcavation activities. Also made final determination of trench depths and if refusal criteria had been met at each 10 foot station.</p> <p>Moretrench: Continued mixing slurry and filling tanks. Continued backfill mixing with excavator. Completed excavation of trench from 1+70 to 2+40. Backfilled trench with 2 3/4 batches of backfill (248 cy). Backfill complete at station 1+00. Backfill quantities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing.</p> <p>Final Trench Depths at 10 foot stations during the day:</p> <table border="1"> <thead> <tr> <th>Station</th> <th>Final Trench Depth</th> </tr> </thead> <tbody> <tr> <td>1+80</td> <td>27.3'</td> </tr> <tr> <td>1+90</td> <td>26.7'</td> </tr> <tr> <td>2+00</td> <td>28.7'</td> </tr> <tr> <td>2+10</td> <td>29.1'</td> </tr> <tr> <td>2+20</td> <td>31.0'</td> </tr> <tr> <td>2+30</td> <td>30.2'</td> </tr> <tr> <td>2+40</td> <td>30.1'</td> </tr> </tbody> </table> <p>Materials Brought on Site:</p> <p>200 cys of Imported Clay Borrow for use in Backfill Mix brought on site during the day (W.J. Graves)</p> <p>Equipment Brought on Site:</p> <p>No additional equipment brought on-site during the day.</p> <p>Additional Note:</p> <p>Landfill liner encountered at station 2+55. Liner did not appear to be continuous, only a small patch.</p> <p><b>Verbal Instructions given by Government:</b><br/>         Randy LeCuyer (USACE Construction Representative) asked that the secondary containment around the fuel cell and generator be tightened up in the two front corners. This was completed by Moretrench during the day.</p> <p><b>Safety Inspection / Safety Meetings:</b><br/>         Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviuewed prior to start of work activties.</p> |                    |                                          |             | Station | Final Trench Depth | 1+80 | 27.3' | 1+90 | 26.7' | 2+00 | 28.7' | 2+10 | 29.1' | 2+20 | 31.0' | 2+30 | 30.2' | 2+40 | 30.1' |

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Contruction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 All imported borrow backfill material brought on site during the day inspected upon arrival. No physical defecencies noted.

Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges.

On-site QC Testing Performed:

Bentonite Slurry:

|                          |                   |
|--------------------------|-------------------|
| Test                     | Time Conducted    |
| Viscosity-Initial        | 1100 & 1513       |
| Viscosity- In trench     | 0920, 1330 & 1434 |
| Density- Initial         | 1105 & 1516       |
| Density- In trench       | 0922, 1333 & 1436 |
| Filtrate Loss- Initial   | 1135 & 1546       |
| Filtrate Loss- In trench | 0954, 1404 & 1508 |
| pH- Initial              | 1108 & 1518       |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

|         |                    |
|---------|--------------------|
| Test    | Time Conducted     |
| Slump   | 0833, 1115, & 1530 |
| Density | 0840, 1150, & 1539 |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content. AMEC started running Materials Fines Content in the field on backfill mix.

Backfill Slope soundings conducted at stations at the start and end of the work shift.  
 Current trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Oder during the day.

**Were there any Delays in Work Progress today?**

| <p>No delays in work progress encountered during the day.</p> <p><b>General Comments:</b><br/>         Work Completed During the Day:</p> <p>Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mizing as trench advanced. Photo IDs: 082212-01 through 08212-07.</p> <p>AMEC: Provided oversight of on-site QC testing performed by Moretrench and trench exvcavation activities. Also made final determination of trench depths and if refusal criteria had been met at each 10 foot station. Started performing in field Materials Fine Content testing on backfill mix.</p> <p>Moretrench: Continued mixing slurry and filling tanks. Continued backfill mixing with excavator. Completed excavation of trench from 2+40 to 3+10. Backfilled trench with 2 1/2 batches of backfill (220 cy). Backfill complete at station 1+70. Backfill quanities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing.</p> <p>Final Trench Depths at 10 foot stations during the day:</p> <table border="1"> <thead> <tr> <th>Station</th> <th>Final Trench Depth</th> </tr> </thead> <tbody> <tr><td>2+50</td><td>29.0'</td></tr> <tr><td>2+60</td><td>30.0'</td></tr> <tr><td>2+70</td><td>32.8'</td></tr> <tr><td>2+80</td><td>36.7'</td></tr> <tr><td>2+90</td><td>37.2'</td></tr> <tr><td>3+00</td><td>36.4*</td></tr> <tr><td>3+10</td><td>36.3*</td></tr> </tbody> </table> <p>* Depth reameasured and recorded at start of shift on 8-23-12.</p> <p>Materials Brought on Site:</p> <p>175 cys of Imported Clay Borrow for use in Backfill Mix brought on site during the day (W.J. Graves)</p> <p>Equipment Brought on Site:</p> <p>No additional equipment brought on-site during the day.</p> <p><b>Verbal Instructions given by Government:</b><br/>         No verbal instruction given by the government during the day.</p> <p><b>Safety Inspection / Safety Meetings:</b><br/>         Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviuewed prior to start of work activties.</p> <p><b>Safety: (Inspections made, Deficiencies noted):</b><br/>         Kane Turmellel (USACE Safety Specialist) on site during the morning to perform inspection.</p> <p>Mr. Turmellel recommended that the laborer mixing slurry wear hearing protection as he is working the vicinity of the main mixing pump ans noise levels in his work hear may be close to 85 db.</p> |                    |                                          |             | Station | Final Trench Depth | 2+50 | 29.0' | 2+60 | 30.0' | 2+70 | 32.8' | 2+80 | 36.7' | 2+90 | 37.2' | 3+00 | 36.4* | 3+10 | 36.3* |

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Contruction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges.

On-site QC Testing Performed:

Bentonite Slurry:

|                          |                   |
|--------------------------|-------------------|
| Test                     | Time Conducted    |
| Viscosity-Initial        | 1004 & 1502       |
| Viscosity- In trench     | 0850, 1330 & 1434 |
| Density- Initial         | 1007 & 1504       |
| Density- In trench       | 0927, 1404 & 1436 |
| Filtrate Loss- Initial   | 1039 & 1546       |
| Filtrate Loss- In trench | 0927, 1404 & 1508 |
| pH- Initial              | 1011 & 1508       |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

|         |                    |
|---------|--------------------|
| Test    | Time Conducted     |
| Slump   | 0902, 1245, & 1545 |
| Density | 0912, 1300, & 1600 |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content. AMEC completed field Materials Fines Content testing on backfill mix for batches 1 through 11. Results of Fine Content % ranged from 37% in Batch 4 to 52% in Batch 5. Average for all 11 batches was 45%.

Backfill Slope soundings conducted at stations at the start and end of the work shift.  
 Current trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Oder during the day.

**Were there any Delays in Work Progress today?**

| <p>No major delays in work progress during the day.<br/>         Moretrech only completed excavation from station 3+10 to 3+30 during the day as very dense material was encountered during the excavation at station 3+40.</p> <p><b>General Comments:</b><br/>         Work Completed During the Day:</p> <p>Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mizing as trench advanced. Photo IDs: 082312-01 through 082312-10.</p> <p>AMEC: Provided oversight of on-site QC testing performed by Moretrench and trench exvcavation activities. Also made final determination of trench depths and if refusal criteria had been met at each 10 foot station. Performed in field Materials Fine Content testing on backfill mix.</p> <p>Moretrench: Continued mixing slurry and filling tanks. Continued backfill mixing with excavator. Completed excavation of trench from 3+10 to 3+30. Backfilled trench with 2 1/2 batches of backfill (220 cy). Backfill complete up to station 2+30. Backfill quanities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing.</p> <p>General site clean-up at end of the shift.</p> <p>Final Trench Depths at 10 foot stations during the day:</p> <table border="1"> <thead> <tr> <th>Station</th> <th>Final Trench Depth</th> </tr> </thead> <tbody> <tr> <td>3+20</td> <td>34.5'</td> </tr> <tr> <td>3+30</td> <td>35.9'</td> </tr> </tbody> </table> <p>Materials Brought on Site:</p> <p>No additional equipment brought on-site during the day.</p> <p>Equipment Brought on Site:</p> <p>No additional equipment brought on-site during the day.</p> <p>Additional Notes:</p> <p>At 1645 a small section of the sidewall of the trench, between station 3+00 and 3+20 sloughed at the crest of the working platform. Long stick excavator was able to remove most of the sloughed material.</p> <p>At the end of the work shift a hose on the diesel powered slurry plant pump broke. The small amount of leaked diesel fuel was contained within the secondary containmnet area and clean with absorbent pads. Hose to be repaired first thing the following day.</p> <p><b>Verbal Instructions given by Government:</b><br/>         No verbal instruction given by the government during the day.</p> <p>Marcus Madison (USACE) on site during the late afternoon.</p> <p><b>Safety Inspection / Safety Meetings:</b><br/>         Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's viewed prior to start of work activties.</p> |                    |                                          |             | Station | Final Trench Depth | 3+20 | 34.5' | 3+30 | 35.9' |

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Contruction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 No on-site QC tests performed during the day as trenching and slurry operations did not occur.

Backfill Slope soundings conducted at stations at the start of the shift.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Oder during the day.

**Were there any Delays in Work Progress today?**  
 No major delays in work progress during the day.

**General Comments:**  
 Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of continuation of construction of the working platform. Photo IDs: 082412-01 through 082312-17.

AMEC: Completed soundings of trench at beginning of shift.

Moretrench: Constructed working platform from 4+50 to 6+25. Cleaned up mixing area and adjacent areas along the trench. General site clean-up at end of the shift.

Materials Brought on Site:

No additional equipment brought on-site during the day.

Equipment Brought on Site:

No additional equipment brought on-site during the day.

Additional Notes:

At the end of the work shift on 8-23-12 a hose on the diesel powered slurry plant pump broke. Hose was repaired first thing in the morning. Pump back in good working order.

**Verbal Instructions given by Government:**  
 Ellen Iorio and Zach Mothershed (USACE) on site during the late morning.

Ellen asked that the height of the berm in the area of the drainage swale be increased to ensure slurry mixed with temporarily stockpiled excavation cuttings did not impact the road.

This has been completed by Moretrench.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Contruction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges.

On-site QC Testing Performed:

Bentonite Slurry:

|                          |                   |
|--------------------------|-------------------|
| Test                     | Time Conducted    |
| Viscosity-Initial        | 0850 & 1315       |
| Viscosity- In trench     | 1130, 1415 & 1510 |
| Density- Initial         | 0854 & 1316       |
| Density- In trench       | 1133, 1418 & 1515 |
| Filtrate Loss- Initial   | 0925 & 1347       |
| Filtrate Loss- In trench | 1204, 1449 & 1550 |
| pH- Initial              | 0900 & 1508       |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

|         |                     |
|---------|---------------------|
| Test    | Time Conducted      |
| Slump   | 1005, 1345, & 1550  |
| Density | 1020, 14000, & 1620 |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content. AMEC completed field Materials Fines Content testing on backfill mix for batches 12 through 14. Results of Fine Content % ranged from 42% in Batch 13 to 44% in Batch 14. Average for all 3 batches was 43%.

Backfill Slope soundings conducted at stations at the start and end of the work shift.  
 Current trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Oder during the day.

**Were there any Delays in Work Progress today?**

| <p>No major delays in work progress during the day.</p> <p><b>General Comments:</b><br/> Work Completed During the Day:</p> <p>Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 082712-01 through 082712-08.</p> <p>AMEC: Provided oversight of on-site QC testing performed by Moretrench and trench exvcavation activities. Also made final determination of trench depths and if refusal criteria had been met at each 10 foot station. Performed in field Materials Fine Content testing on backfill mix.</p> <p>Moretrench: Continued mixing slurry and filling tanks. Continued backfill mixing with excavator. Completed excavation of trench from 3+30 to 3+80. Backfilled trench with 2 1/2 batches of backfill (220 cy). Backfill complete up to station 2+60. Backfill quantities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing.</p> <p>General site clean-up at end of the shift.</p> <p>Final Trench Depths at 10 foot stations during the day:</p> <table border="1"> <thead> <tr> <th>Station</th> <th>Final Trench Depth</th> </tr> </thead> <tbody> <tr> <td>3+40</td> <td>40.1'</td> </tr> <tr> <td>3+50</td> <td>42.0'</td> </tr> <tr> <td>3+60</td> <td>42.0'</td> </tr> <tr> <td>3+70</td> <td>44.0'</td> </tr> <tr> <td>3+80</td> <td>43.5'</td> </tr> </tbody> </table> <p>Materials Brought on Site:</p> <p>75cys of Imported Clay Borrow for backfill mix (W.J. Graves)</p> <p>Equipment Brought on Site:</p> <p>No additional equipment brought on-site during the day.</p> <p>Additional Notes:</p> <p>It was observed that some sloughing had occured over the weekend between station 2+60 and 2+80. Slough did not fall into the trench. At was determined by AMEC and Moretrench it would create more problems if the excavator operator tried to move mats back up the trench to remove the slough as more material would get knocked into the trench.</p> <p><b>Verbal Instructions given by Government:</b><br/> No verbal instruction given by the government during the day.</p> <p>Zach Mothershed (USACE) on site during the morning.</p> <p>Marcus Madison (USACE) on site during the late afternoon.</p> <p><b>Safety Inspection / Safety Meetings:</b><br/> Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviued prior to start of work activties.</p> |                    |                                          |             | Station | Final Trench Depth | 3+40 | 40.1' | 3+50 | 42.0' | 3+60 | 42.0' | 3+70 | 44.0' | 3+80 | 43.5' |

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Contruction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Follow-up inspection held for DFW: Soil-Bentonite Wall Construction

All imported borrow material used for backfill mix was visually inspected upon arrival.

Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges. As excavation activties were only conducted for half the work only half the amount of required field QC for a full work shift was completed during the day.

On-site QC Testing Performed:

Bentonite Slurry:

| Test                     | Time Conducted |
|--------------------------|----------------|
| Viscosity-Initial        | 1250           |
| Viscosity- In trench     | 1420 &1535     |
| Density- Initial         | 1255           |
| Density- In trench       | 1423 &1538     |
| Filtrate Loss- Initial   | 1326           |
| Filtrate Loss- In trench | 1455 & 1610    |
| pH- Initial              | 1258           |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

| Test    | Time Conducted |
|---------|----------------|
| Slump   | 1045 & 1545    |
| Density | 1100 & 1600    |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content. AMEC completed field Materials Fines Content testing on backfill mix for batch 15. Results of Fine Content % from Batch 15 was 52%..

Backfill Slope soundings conducted at stations at the start and end of the work shift. Current trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim ?**

| <p>No developments that may lead to a Change Oder during the day.</p> <p><b>Were there any Delays in Work Progress today?</b><br/>         No major delays in work progress during the day.</p> <p><b>General Comments:</b><br/>         Work Completed During the Day:</p> <p>Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 082812-01 through 082728-16.</p> <p>AMEC: Provided oversight of on-site QC testing performed by Moretrench and trench exvcavation activities. Also made final determination of trench depths and if refusal criteria had been met at each 10 foot station. Performed in field Materials Fine Content testing on backfill mix.</p> <p>Moretrench: Continued mixing slurry and filling tanks. Continued backfill mixing with excavator. Excavation activites only conducted during second half of the work shift. During the first half of the work shift Moretrench worked on cutting out of the bank to the east of the barrier wall alignment from approximately station 7+00 to 8+50 to allow room more the excvator and crane mats. Berm comprised of all sand with a 6 inch to 1 foot layer of topsoil and vegetation. Completed excavation of trench from 3+80 to 4+00. Backfilled trench with 1 1/2 batches of backfill. Backfill complete up to station 2+80. Backfill quantities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing.<br/>         General site clean-up at end of the shift.</p> <p>Final Trench Depths at 10 foot stations during the day:</p> <table border="1"> <thead> <tr> <th>Station</th> <th>Final Trench Depth</th> </tr> </thead> <tbody> <tr> <td>3+90</td> <td>45.0'</td> </tr> <tr> <td>4+00</td> <td>44.1'</td> </tr> </tbody> </table> <p>Materials Brought on Site:</p> <p>250 cys of Imported Clay Borrow for backfill mix (W.J. Graves)</p> <p>Equipment Brought on Site:</p> <p>No additional equipment brought on-site during the day.</p> <p>Additional Notes:</p> <p>During monring trench soundings it was observed that the sounding at station 3+20 was approximately 2 feet shallower than the end of the day sound on 8-27-10 at the same station. However, stations 3+00 and 3+10 were measured 1 to 2 feet deeper. It is probable that backfill slid from stations 3+00 and 3+10 and settled at station 3+20 overnight. There was no evidence of slough or cave in at these stations.</p> <p>Landfill liner was encountered at approximately station 4+15 at a depth of approximately 2 feet below exsisting grade and has continued as excavation activites proceed down the alignment.</p> <p><b>Verbal Instructions given by Government:</b><br/>         No verbal instruction given by the government during the day.</p> <p>Zach Mothershed (USACE Project Engineer) and John Kollberg (USACE Geo-tech Eng.) on site during the afternoon.</p> <p><b>Safety Inspection / Safety Meetings:</b><br/>         Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviuewed prior to start of work activties.</p> |                    |                                          |             | Station | Final Trench Depth | 3+90 | 45.0' | 4+00 | 44.1' |

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Contruction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Initial Inspection for DFW: Stockpiling of Soil Materails held during the day.

All imported clay borrow used for backfill mix inspected upon deliveries.

Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges.

On-site QC Testing Performed:

Bentonite Slurry:

|                          |                   |
|--------------------------|-------------------|
| Test                     | Time Conducted    |
| Viscosity-Initial        | 0830 & 1450       |
| Viscosity- In trench     | 0910, 1030 & 1530 |
| Density- Initial         | 0832 & 1453       |
| Density- In trench       | 0915, 1034 & 1533 |
| Filtrate Loss- Initial   | 0905 & 1525       |
| Filtrate Loss- In trench | 0950, 1105 & 1604 |
| pH- Initial              | 0840 & 1456       |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

|         |                |
|---------|----------------|
| Test    | Time Conducted |
| Slump   | 1115 & 1438    |
| Density | 1134 & 1500    |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content. AMEC completed field Materials Fines Content testing on backfill mix for batch 16. Results of Fine Content % in Batch 16 was 41%.

Backfill Slope soundings conducted at stations at the start and end of the work shift. Current trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim ?**

**CONTRACTORS QUALITY CONTROL REPORT (QCR)**  
**DAILY LOG OF CONSTRUCTION**

REPORT NUMBER  
852 Page 2 of 4

DATE  
29 Aug 2012 - Wednesday

PROJECT  
Shepley's Landfil, Devens Cutoff Wall

CONTRACT NUMBER  
W912WJ-10-D-0003 0002

No developments that may lead to a Change Oder during the day.

**Were there any Delays in Work Progress today?**

No major delays in work progress during the day.

**General Comments:**

Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 082912-01 through 082912-07.

AMEC: Geotechnical Engineer and Principi Geotechnical Engineer provided oversight of on-site QC testing performed by Moretrench and trench exvavation activities. Due to high degree of concern of ensuring contact with compontent bedrock at station 4+00 and 5+00 AMEC Principi Geotechnical Engineer made all final determination of trench depths and if refusal criteria had been met at each 10 foot station. Performed in field Materials Fine Content testing on backfill mix.

Moretrench: Continued mixing slurry and filling tanks. Cleaned-up working platform from station 5+00 to station 6+00. Continued backfill mixing with excavator. Completed excavation of trench from 4+00 to 4+50. Backfilled trench with 1 1/2 batches of backfill. Backfill complete up to station 3+10. Backfill quantities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing.  
General site clean-up at end of the shift.

Final Trench Depths at 10 foot stations during the day:

| Station | Final Trench Depth |
|---------|--------------------|
| 4+10    | 42.8'              |
| 4+20    | 42.1'              |
| 4+30    | 41.2'              |
| 4+40    | 40.0'              |

Materials Brought on Site:

50 cys of Imported Clay Borrow for backfill mix (W.J. Graves)

Equipment Brought on Site:

No additional equipment brought on-site during the day.

Additional Notes:

A lengthy discussion was held between Sovereign, AMEC and the USACE (Ellen Iorio) about the refusal depth of station 4+50 due to bedrock being found at shallower depth than anticipated. Borings logs and working platform elevations were reviewed in detail. It was concured that the area of weathered bedrock shown on the specification drawings was an interpatation from two boring logs in the vicinity of of station 4+50. Boring SHL 11-02 had shown evidence of weathered bedrock which has and approximate off-set of 20 feet. Boring SHL 12-06 which was approximately on the proposed alignment of the trench showed no weathered bedrock and a depth of 42 feet. Moretrench was not able to excavated deeper than 39.4 feet at station 4+50. This was after two and half hrs of working on the station from both ways of the cross at the vertex of the trench. It was agreeded that Moretrench will try to excavate a little more in the area the morning of the following day and if no progress in a downward trend was shown then it would be determined that refusal had been met.

Representatives of MassDEP and US EPA on-site throughout the day. All regulators were given periodic updates on the status of work.

**Verbal Instructions given by Government:**

Numerous USACE representatives on site through-out the day.

Zach Mothershed (USACE)  
Marcus Madison (USACE)  
Ellen Iorio (USACE)

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Contruction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 All imported borrow for backfill mix inspected upon delivery.

Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges.

Bentonite Slurry:

|                          |                   |
|--------------------------|-------------------|
| Test                     | Time Conducted    |
| Viscosity-Initial        | 0815 & 1400       |
| Viscosity- In trench     | 1020, 1115 & 1316 |
| Density- Initial         | 0810 & 1403       |
| Density- In trench       | 1025, 1119 & 1320 |
| Filtrate Loss- Initial   | 0849 & 1435       |
| Filtrate Loss- In trench | 1057, 1151 & 1352 |
| pH- Initial              | 0821 & 1406       |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

|         |                |
|---------|----------------|
| Test    | Time Conducted |
| Slump   | 1030 & 1545    |
| Density | 1046 & 1600    |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content.

Backfill Slope soundings conducted at stations at the start and end of the work shift.  
 Current trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim?**  
 No developments that may lead to a Change Oder during the day.

**Were there any Delays in Work Progress today?**  
 No major delays in work progress during the day.

**CONTRACTORS QUALITY CONTROL REPORT (QCR)**  
**DAILY LOG OF CONSTRUCTION**

REPORT NUMBER  
853 Page 2 of 3

DATE  
30 Aug 2012 - Thursday

PROJECT  
Shepley's Landfil, Devens Cutoff Wall

CONTRACT NUMBER  
W912WJ-10-D-0003 0002

**General Comments:**

Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 083012-01 through 083012-18.

AMEC: Geotechnical Engineer and Principi Geotechnical Engineer provided oversight of on-site QC testing performed by Moretrench and trench exvavation activities. Due to high degree of concern of ensuring contact with compontent bedrock at station 4+00 and 5+00 AMEC Principi Geotechnical Engineer made all final determination of trench depths and if refusal criteria had been met at each 10 foot station.

Moretrench: Continued mixing slurry and filling tanks. Continued backfill mixing with excavator. Completed excavation of trench from 4+50 to 5+20. Backfilled trench with 1 1/2 batches of backfill. Backfill complete up to station 3+80. Backfill quanities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing.  
General site clean-up at end of the shift.

Final Trench Depths at 10 foot stations during the day:

| Station | Final Trench Depth |
|---------|--------------------|
| 4+50    | 39.4'              |
| 4+60    | 37.7'              |
| 4+70    | 36.6'              |
| 4+80    | 34.7'              |
| 4+90    | 35.0'              |
| 5+00    | 39.1'              |
| 5+10    | 39.9'              |
| 5+20    | 39.5'              |

Materials Brought on Site:

50 cys of Imported Clay Borrow for backfill mix (W.J. Graves)

Equipment Brought on Site:

No additional equipment brought on-site during the day.

Additional Notes:

Sovereign and AMEC verified the elevation of the working platform using a survey level. Based on the survey results, the verified elevation of the working platform at station 4+50 was within 0.1' of the measured elevation. This check was performed because of the discrepancy between the anticipated depth to competent rock and final trench depth.

Representatives of MassDEP and US EPA on-site throughout the day. All regulators were given periodic updates on the status of work.

**Verbal Instructions given by Government:**

Numerous USACE representatives on site through-out the day.

Zach Mothershed (USACE)  
Marcus Madison (USACE)  
Ellen Iorio (USACE)

No verbal instruction given by the government during the day.

**Safety Inspection / Safety Meetings:**

Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviewed prior to start of work activties.

Due to the high number of visitors to the site during the day caution tape was strung of the tented site sign-in area along the west side of the haul road to approximately station 8+50. All visitors were checked-in, given a safety briefing on all the hazards of the site and escorted on the inside of the caution tape to the viewing area marked with cones, barricones, and flags.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Contruction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Initial Inspection held for DFW: Penetration of Landfill Liner

All imported borrow material used for backfill mix was visually inspected upon arrival.  
 Condition of bentonite supersacks and 50 lb bags inspected upon arrival.

Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specifications. Only half the required on-site QC testing performed on the slurry as excavation activities were only conducted for half a shift during the day.

On-site QC Testing Performed:

Bentonite Slurry:

|                          |                |
|--------------------------|----------------|
| Test                     | Time Conducted |
| Viscosity-Initial        | 1000           |
| Viscosity- In trench     | 0850 & 1300    |
| Density- Initial         | 1013           |
| Density- In trench       | 0854 & 1304    |
| Filtrate Loss- Initial   | 1044           |
| Filtrate Loss- In trench | 0927 & 1336    |
| pH- Initial              | 1015           |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

|         |                |
|---------|----------------|
| Test    | Time Conducted |
| Slump   | 1115 & 1318    |
| Density | 1119 & 1321    |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content. AMEC completed field Materials Fines Content testing on backfill mix for batches 17 through 19. Results of Fine Content % ranged from 37% in Batch 17 to 50% in Batch 19. Average Fine Content % was 44%.

Backfill Slope soundings conducted at stations at the start and end of the work shift.  
 Current trench profile emailed under seperate cover to USACE representatives.

**CONTRACTORS QUALITY CONTROL REPORT (QCR)  
DAILY LOG OF CONSTRUCTION**

REPORT NUMBER  
854 Page 2 of 3

DATE  
31 Aug 2012 - Friday

PROJECT  
Shepley's Landfil, Devens Cutoff Wall

CONTRACT NUMBER  
W912WJ-10-D-0003 0002

**Did anything develop that may lead to a Change Order/Claim?**

No developments that may lead to a Change Oder during the day.

**Were there any Delays in Work Progress today?**

No major delays in work progress during the day.

**General Comments:**

Work Completed During the Day:

Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 083112-01 through 083112-11.

AMEC: Provided oversight of on-site QC testing performed by Moretrench and trench exvcavation activities. Also made final determination of trench depths and if refusal criteria had been met at each 10 foot station. Performed in field Materials Fine Content testing on backfill mix.

Moretrench: Continued mixing slurry and filling tanks. Continued backfill mixing with excavator. Excavation activites only conducted during first half of the work shift. Completed excavation of trench from 5+20 to 5+60. Backfilled trench with 1 1/2 batches of backfill. Backfill complete up to station 4+40. Backfill quantities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing. General site clean-up at end of the shift.

Final Trench Depths at 10 foot stations during the day:

| Station | Final Trench Depth |
|---------|--------------------|
| 5+30    | 39.8'              |
| 5+40    | 40.0'              |
| 5+50    | 40.6'              |
| 5+60    | 40.5'              |

Materials Brought on Site:

300 cys of Imported Clay Borrow for backfill mix (W.J. Graves)

Bentonite (Hydrogel):

17 Bulk Bags

900 (50 lb) Bags

Equipment Brought on Site:

No additional equipment brought on-site during the day.

Additional Notes:

It appeared that slough occured overnight at station 4+30. Morning soundings of trench were in range and slough did not likely fall in the trench.

**Verbal Instructions given by Government:**

No verbal instruction given by the government during the day.

Marcus Madison (USACE) on site during the afternoon.

**Safety Inspection / Safety Meetings:**

Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviuewed prior to start of work activties.

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Contruction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 All imported borrow for backfill mix inspected upon delivery.

Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges.

Bentonite Slurry:

|                          |                   |
|--------------------------|-------------------|
| Test                     | Time Conducted    |
| Viscosity-Initial        | 1134 & 1535       |
| Viscosity- In trench     | 1100, 1350 & 1615 |
| Density- Initial         | 1138 & 1540       |
| Density- In trench       | 1104, 1353 & 1621 |
| Filtrate Loss- Initial   | 1209 & 1611       |
| Filtrate Loss- In trench | 1136, 1425 & 1652 |
| pH- Initial              | 1135 & 1537       |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

|         |                |
|---------|----------------|
| Test    | Time Conducted |
| Slump   | 1020 & 1549    |
| Density | 1119 & 1621    |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content. AMEC conducted on-site Materials Fines Content for backfill batches 20 through 25. Fines Content % ranged from 38% in batch 22 to 50% in batch 21. Average Fines Content % was 46%.

Backfill Slope soundings conducted at stations at the start and end of the work shift.  
 Current trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**

| <p>No was a minor 1.5 hour delays in work progress during the day as the boom of the long-stick excavator was making inspected after making loud noises. Excavation was halted to inspect pins and bushings on the end of the stick. Only general wear detected on stick pin.</p> <p><b>General Comments:</b></p> <p>Work Completed During the Day:</p> <p>Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 090412-01 through 090412-14.</p> <p>AMEC: Geotechnical Engineer provided oversight of on-site QC testing performed by Moretrench and trench exvavation activities. Geotechnical Engineer made all final determination of trench depths and if refusal criteria had been met at each 10 foot station. Geotechnical Engineer completed on site Fine Content % of backfill mixes.</p> <p>Moretrench: Continued mixing slurry and filling tanks. Continued backfill mixing with excavator. Completed excavation of trench from 5+60 to 6+10. Backfilled trench with 1 1/2 batches of backfill. Backfill complete up to station 4+90. Backfill quantities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing. Completed construction working platform out to station 7+40. General site clean-up at end of the shift.</p> <p>Final Trench Depths at 10 foot stations during the day:</p> <table> <tr> <th>Station</th> <th>Final Trench Depth</th> </tr> <tr> <td>5+70</td> <td>39.0'</td> </tr> <tr> <td>5+80</td> <td>39.2'</td> </tr> <tr> <td>5+90</td> <td>36.6'</td> </tr> <tr> <td>6+00</td> <td>36.6'</td> </tr> <tr> <td>6+10</td> <td>36.6'</td> </tr> </table> <p>Materials Brought on Site:</p> <p>400 cys of Imported Clay Borrow for backfill mix (W.J. Graves)</p> <p>Equipment Brought on Site:</p> <p>No additional equipment brought on-site during the day.</p> <p>Additional Notes:</p> <p>Moretrench went back and scraped bottom of trench back to bedrock from station 5+20 to 5+60 before continuing with trench excavations to station 5+70 due the fact no excavation activities occured over the long three day weekend. This was followed my morning sounding of the trench being conducted again.</p> <p>It was noted that a very limited amount of trench cuttings are being made available for use in backfill due to large amounts of trash being encountered in excavated material in stations being excavated during the day. Sovereign, AMEC, and Moretrench are scheduled to have a confernece call on the issue the morning of the following day to discuss a possible other backfill mixture using a higher percentage of the imported fines borrow in the backfill mix batches.</p> <p><b>Verbal Instructions given by Government:</b></p> <p>Randy LeCuyer and Marcus Madison (USACE Construction Representitives) on site during the morning. Conducted walk-through and inspection of the site.</p> <p>No verbal instruction given by the government during the day.</p> <p><b>Safety Inspection / Safety Meetings:</b></p> <p>Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviuewed prior to start of work activties.</p> |                    |                                                                | Station | Final Trench Depth | 5+70 | 39.0' | 5+80 | 39.2' | 5+90 | 36.6' | 6+00 | 36.6' | 6+10 | 36.6' |

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Contruction of Working Platform

**Quality Control Inspections and Activities (List by Feature of Work)**  
 All imported borrow for backfill mix inspected upon delivery.

Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges. Limited amount of QC on slurry has excavation ativities were only conducted for a quater of a shift.

Bentonite Slurry:

| Test                     | Time Conducted |
|--------------------------|----------------|
| Viscosity-Initial        | 0950           |
| Viscosity- In trench     | 1415           |
| Density- Initial         | 0954           |
| Density- In trench       | 1418           |
| Filtrate Loss- Initial   | 1027           |
| Filtrate Loss- In trench | 1450           |
| pH- Initial              | 1008           |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

| Test    | Time Conducted |
|---------|----------------|
| Slump   | 1040           |
| Density | 1119           |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content. AMEC conducted on-site Materials Fines Content for backfill batches 26 through 28. Fines Content % ranged from 45% in batch 26 to 56% in batch 28. Average Fines Content % was 52%.

Backfill Slope soundings conducted at stations at the start and end of the work shift.  
 Current trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**

| <p>Excavation activities were only conducted for a quarter of a shift as the H-Link pin and the H-Link itself was it need of replacing on the long-stick of 374 excavator. Parts to arrive the next morning at 0700 to make all needed repairs. Moretrench completed the remainder of the working platform construction during the down excavation time.</p> <p><b>General Comments:</b><br/>         Work Completed During the Day:</p> <p>Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC.</p> <p>AMEC: Geotechnical Engineer provided oversight of on-site QC testing performed by Moretrench and trench exvavation activities. Geotechnical Engineer made all final determination of trench depths and if refusal criteria had been met at each 10 foot station. Geotechnical Engineer completed on site Fine Content % of backfill mixes.</p> <p>Moretrench: Continued mixing slurry and filling tanks. Continued backfill mixing with excavator. Completed excavation of trench from 6+10 to 6+20. Backfilled trench with a 1/2 batche of backfill. Backfill complete up to station 5+00. Backfill quantities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing. Completed the remainder of the construction of working platform. General site clean-up at end of the shift.</p> <p>Final Trench Depths at 10 foot stations during the day:</p> <table border="1"> <thead> <tr> <th>Station</th> <th>Final Trench Depth</th> </tr> </thead> <tbody> <tr> <td>6+20</td> <td>38.4'</td> </tr> </tbody> </table> <p>Materials Brought on Site:</p> <p>No additional material brought on-site during the day.</p> <p>Equipment Brought on Site:</p> <p>No additional equipment brought on-site during the day.</p> <p>Additional Notes:</p> <p>It was noted that a very limited amount of trench cuttings were being made available for use in backfill due to large amounts of trash being encountered in excavated material in stations being excavated the last few days. Sovereign, AMEC, and Moretrench condcuted a confernece call on the issue. It was determined to use a 75 % imported fines to 25% trench cuttings backfill mix. A sample was taken of this mixutre in afternoon and sent to the lab for a rush turn on permeability analysis.</p> <p><b>Verbal Instructions given by Government:</b><br/>         Randy LeCuyer, Marcus Madison (USACE Construction Representitives), and Zach Mothersed (Project Eng.) on site during the morning. Conducted walk-through and inspection of the site.</p> <p>No verbal instruction given by the government during the day.</p> <p><b>Safety Inspection / Safety Meetings:</b><br/>         Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviuewed prior to start of work activties.</p> |                    |                                          |             | Station | Final Trench Depth | 6+20 | 38.4' |

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Penetration of Landfill Liner

**Quality Control Inspections and Activities (List by Feature of Work)**  
 All imported borrow for backfill mix inspected upon delivery.

Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges.

Bentonite Slurry:

| Test                     | Time Conducted    |
|--------------------------|-------------------|
| Viscosity-Initial        | 0850 & 1400       |
| Viscosity- In trench     | 1020, 1236 & 1500 |
| Density- Initial         | 0854 & 1406       |
| Density- In trench       | 1023, 1240 & 1510 |
| Filtrate Loss- Initial   | 0927 & 1438       |
| Filtrate Loss- In trench | 1054, 1311 & 1542 |
| pH- Initial              | 0856 & 1404       |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

| Test    | Time Conducted |
|---------|----------------|
| Slump   | 1100 & 1300    |
| Density | 1119 & 1315    |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content. AMEC conducted on-site Materials Fines Content for backfill batch 28 (75/25 mixutre of Fines/Trench Cuttings). Fines Content % of batch 28 was 61%.

Backfill Slope soundings conducted at stations at the start and end of the work shift.  
 Current trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**

| <div> <div> <div>Minor delays in work progress during the day as mechanical problems with the boom and long-stick of the 374 excavator were encountered. Did not start excavation activities in the morning untill 0900 as a new H-Link and Pin were installed.</div> <div>Excavation activties were ceased at 1530 as it was determined the bushing in the stick were crushed. New parts to arrive the next morning at 0700.</div> </div> <div> <div>General Comments:</div> <div>Work Completed During the Day:</div> <div> <div>Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 090612-01 through 090612-04.</div> <div>AMEC: Principal Geotechnical Engineer provided oversight of on-site QC testing performed by Moretrench and trench exvcavation activities. Principal Geotechnical Engineer made all final determination of trench depths and if refusal criteria had been met at each 10 foot station. Principal Geotechnical Engineer completed on site Fine Content % of backfill mixes.</div> <div>Moretrench: Continued mixing slurry and filling tanks. Continued backfill mixing with excavator. Completed excavation of trench from 6+20 to 6+60. Backfilled trench with 1 1/2 batches of backfill. Backfill complete up to station 5+40. Backfill quantities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing. General site clean-up at end of the shift.</div> <div>Final Trench Depths at 10 foot stations during the day:</div> <table> <tr> <th>Station</th> <th>Final Trench Depth</th> </tr> <tr> <td>6+30</td> <td>38.5'</td> </tr> <tr> <td>6+40</td> <td>40.2'</td> </tr> <tr> <td>6+50</td> <td>40.6'</td> </tr> <tr> <td>6+60</td> <td>39.5'</td> </tr> </table> <div>Materials Brought on Site:</div> <div>25 cys of Imported Clay Borrow for backfill mix (W.J. Graves)</div> <div>Equipment Brought on Site:</div> <div>No additional equipment brought on-site during the day.</div> <div>Additional Notes:</div> <div>Bill Brandon (US EPA) on site during the day. Given periodic status updates by Sovereign and AMEC Principal Engineer. No major comments or concerns noted from EPA representative.</div> <div>Backfill mixes are now being mixed with 75% Imported Fines and 25% Trench cuttings. New mixes started around station 5+10.</div> </div> <div> <div>Verbal Instructions given by Government:</div> <div>Randy Lecuyer and Marcus Madison (USACE Construction Representative) on site during the morning. Conducted walk-through and inspection of the site.</div> <div>No verbal instruction given by the government during the day.</div> </div> <div> <div>Safety Inspection / Safety Meetings:</div> <div>Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviewed prior to start of work activties.</div> </div> </div> <tr> <td colspan="3"> <div>PREP/INITIAL DATES (Preparatory and initial dates held and advance notice)</div> <div>No preparatory or initial inspections were held today</div> </td> </tr> <tr> <td colspan="3"></td> </tr> </div> |                    |                                                                | Station | Final Trench Depth | 6+30 | 38.5' | 6+40 | 40.2' | 6+50 | 40.6' | 6+60 | 39.5' | <div>PREP/INITIAL DATES (Preparatory and initial dates held and advance notice)</div> <div>No preparatory or initial inspections were held today</div> |  |  |  |  |  |

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Penetration of Landfill Liner

**Quality Control Inspections and Activities (List by Feature of Work)**  
 Follow-up Inspection conducted for DFW: Construction of Working Platform.

All imported borrow for backfill mix inspected upon delivery.

Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges. Limited amount of on-site QC testing conducted as excavation activities were only conducted for half a shift.

Bentonite Slurry:

|                          |                |
|--------------------------|----------------|
| Test                     | Time Conducted |
| Viscosity-Initial        | 1126           |
| Viscosity- In trench     | 1240 & 1430    |
| Density- Initial         | 1130           |
| Density- In trench       | 1245 & 1434    |
| Filtrate Loss- Initial   | 1200           |
| Filtrate Loss- In trench | 1316 & 1504    |
| pH- Initial              | 1134           |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

|         |                |
|---------|----------------|
| Test    | Time Conducted |
| Slump   | 1300 & 1330    |
| Density | 1310 & 1345    |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content. AMEC conducted on-site Materials Fines Content for backfill batch 29. Fines Content % of batch 29 was 51%.

Backfill Slope soundings conducted at stations at the start and end of the work shift.  
 Current trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

| <p><b>Were there any Delays in Work Progress today?</b><br/>         Minor delays in work progress during the day. Excavation activities did not start until 1000 as a new bushings were installed the bottom of the 374 excavator long-stick.</p> <p><b>General Comments:</b><br/>         Work Completed During the Day:</p> <p>Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 090712-01 through 090712-05.</p> <p>AMEC: Principal Geotechnical Engineer provided oversight of on-site QC testing performed by Moretrench and trench exvcavation activities. Principal Geotechnical Engineer made all final determination of trench depths and if refusal criteria had been met at each 10 foot station. Principal Geotechnical Engineer completed on site Fine Content % of backfill mixes.</p> <p>Moretrench: Continued mixing slurry and filling tanks. Continued backfill mixing with excavator. Completed excavation of trench from 6+60 to 7+10. Backfilled trench with 1 1/2 batches of backfill. Backfill complete up to station 5+80. Backfill quantities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing. General site clean-up at end of the shift.</p> <p>Final Trench Depths at 10 foot stations during the day:</p> <table border="1"> <thead> <tr> <th>Station</th> <th>Final Trench Depth</th> </tr> </thead> <tbody> <tr> <td>6+70</td> <td>45.8'</td> </tr> <tr> <td>6+80</td> <td>45.2'</td> </tr> <tr> <td>6+90</td> <td>44.4'</td> </tr> <tr> <td>7+00</td> <td>44.0'</td> </tr> <tr> <td>7+10</td> <td>43.0'</td> </tr> </tbody> </table> <p>Materials Brought on Site:</p> <p>350 cys of Imported Clay Borrow for backfill mix (W.J. Graves)</p> <p>Equipment Brought on Site:</p> <p>No additional equipment brought on-site during the day.</p> <p>Additional Notes:</p> <p>Bill Brandon (US EPA) on site during in the late afternoon. Given project status update by Sovereign and AMEC Principal Engineer. No major comments or concerns noted from EPA representative.</p> <p><b>Verbal Instructions given by Government:</b><br/>         Randy Lecuyer and Marcus Madison (USACE Construction Representative) on site during the morning. Conducted walk-through and inspection of the site.</p> <p>No verbal instructions given by the government during the day.</p> <p><b>Safety Inspection / Safety Meetings:</b><br/>         Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviuewed prior to start of work activties.</p> |                    |                                          |             | Station | Final Trench Depth | 6+70 | 45.8' | 6+80 | 45.2' | 6+90 | 44.4' | 7+00 | 44.0' | 7+10 | 43.0' |

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
 Penetration of Landfill Liner

**Quality Control Inspections and Activities (List by Feature of Work)**  
 All imported borrow for backfill mix inspected upon delivery.

Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges.  
 Bentonite Slurry:

|                          |                   |
|--------------------------|-------------------|
| Test                     | Time Conducted    |
| Viscosity-Initial        | 0955 & 135        |
| Viscosity- In trench     | 1030, 1205 & 1410 |
| Density- Initial         | 1000 & 1338       |
| Density- In trench       | 1034, 1215 & 1416 |
| Filtrate Loss- Initial   | 1034 & 1408       |
| Filtrate Loss- In trench | 1105, 1243 & 1449 |
| pH- Initial              | 1002 & 1345       |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

|         |                   |
|---------|-------------------|
| Test    | Time Conducted    |
| Slump   | 1100, 1313 & 1512 |
| Density | 1114, 1345 & 1532 |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content.

Backfill Slope soundings conducted at stations at the start and end of the work shift.  
 Current trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**  
 Minor delays in work progress during the day. Excavation activities did not ceased at 1630 to inspect top bin of stick cylinder of the 374 excavator. Bushings seem to be worn and may be repalced the following morning.

| <b>CONTRACTORS QUALITY CONTROL REPORT (QCR)</b><br><b>DAILY LOG OF CONSTRUCTION</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                    | REPORT NUMBER<br>864                     | Page 2 of 3 |         |                    |      |       |      |       |      |       |      |       |      |       |      |      |      |      |

| <p><b>General Comments:</b></p> <p>Work Completed During the Day:</p> <p>Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 091012-01 through 091012-05.</p> <p>AMEC: Geotechnical Engineer provided oversight of on-site QC testing performed by Moretrench and trench exvcavation activities. Geotechnical Engineer made all final determination of trench depths and if refusal criteria had been met at each 10 foot station. Geotechnical Engineer completed on site Fine Content % of backfill mixes.</p> <p>Moretrench: Continued mixing slurry and filling tanks. Continued backfill mixing with excavator. Completed excavation of trench from 7+10 to 7+80. Backfilled trench with 3 1/2 batches of backfill. Backfill complete up to station 6+60. Backfill quantities summarized on Trench Profile submitted under seperate cover the USACE representatives. Performed all required on-site QC testing. General site clean-up at end of the shift.</p> <p>Final Trench Depths at 10 foot stations during the day:</p> <table border="1"> <thead> <tr> <th>Station</th> <th>Final Trench Depth</th> </tr> </thead> <tbody> <tr><td>7+20</td><td>43.2'</td></tr> <tr><td>7+30</td><td>39.1'</td></tr> <tr><td>7+40</td><td>38.7'</td></tr> <tr><td>7+50</td><td>38.8'</td></tr> <tr><td>7+60</td><td>38.0'</td></tr> <tr><td>7+70</td><td>38.0</td></tr> <tr><td>7+80</td><td>38.9</td></tr> </tbody> </table> <p>Materials Brought on Site:</p> <p>175 cys of Imported Clay Borrow for backfill mix (W.J. Graves)</p> <p>Equipment Brought on Site:</p> <p>No additional equipment brought on-site during the day.</p> <p><b>Verbal Instructions given by Government:</b></p> <p>Marcus Madison (USACE Construction Representative), Zach Mothershed (USACE Project Eng.) and Christine Johnson (USACE Construction Department) on site during the day. Conducted walk-through and inspection of the site.</p> <p>No verbal instructions given by the government during the day.</p> <p><b>Safety Inspection / Safety Meetings:</b></p> <p>Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviued prior to start of work activties.</p> |                    |                                          |             | Station | Final Trench Depth | 7+20 | 43.2' | 7+30 | 39.1' | 7+40 | 38.7' | 7+50 | 38.8' | 7+60 | 38.0' | 7+70 | 38.0 | 7+80 | 38.9 |

**QC NARRATIVES**

**Contractor/Subcontractor & Area of Responsibility for work:**  
 Sovereign - Provided oversight of Moretrench and AMEC. Provided on-site QC and documentation.  
 AMEC - Provided on-site engineering services and oversight of all field QC testing.  
 Moretrench - Excavation and Barrier Wall Construction Contractor

**Activities in Progress (List by Activity Number)**  
 DFW: Soil-Bentonite Wall Construction  
     Penetration of Landfill Liner  
     Stockpiling Excess Soils

**Quality Control Inspections and Activities (List by Feature of Work)**  
 All imported borrow for backfill mix inspected upon delivery.

Moretrench completed on-site QC testing of slurry being mixed in tanks prior to placement in trench along with on-site QC testing of slurry within the trench. Moretrech and AMEC also conducted on-site QC testing of backfill batches. Samples of backfill batches also collected for off-site QC testing. AMEC provided oversight of all Moretrench field QC testing to confirm testing was completed properly as per project specification and all results were within acceptable ranges. Limited amount of on-site QC testing performed as excavation activites were conducted under a short shift.

Bentonite Slurry:

|                          |                |
|--------------------------|----------------|
| Test                     | Time Conducted |
| Viscosity-Initial        | 1235           |
| Viscosity- In trench     | 1115 & 1430    |
| Density- Initial         | 1240           |
| Density- In trench       | 1121 & 1433    |
| Filtrate Loss- Initial   | 1312           |
| Filtrate Loss- In trench | 1153 & 1504    |
| pH- Initial              | 1243           |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Soil-Bentonite Backfill:

|         |                  |
|---------|------------------|
| Test    | Time Conducted   |
| Slump   | 1015, 1300, 1510 |
| Density | 1045, 1332, 1534 |

All results of on-site QC tests were emailed under seperate cover to USACE representatives.

Samples collected of Soil-Bentonite Backfill for off-site analysis of Permeability, Gradation, and Materials Fines Content.

Backfill Slope soundings conducted at stations at the start and end of the work shift.  
 Current trench profile emailed under seperate cover to USACE representatives.

**Did anything develop that may lead to a Change Order/Claim ?**  
 No developments that may lead to a Change Order during the day.

**Were there any Delays in Work Progress today?**

| <p>Minor delays in work progress during the day. Excavation activities did not start until 0830 as Moretrench was waiting for replacement parts for the 374 excavator long-stick to be delivered to site. Moretrench made the determination that excavation activities could be completed without having to change the top stick cylinder bushing resulting in less down time.</p> <p><b>General Comments:</b><br/>         Work Completed During the Day:</p> <p>Sovereign: Provided project oversight and on-site QC of Moretrench and AMEC. Photographed progress of excavation and backfill mixing as trench advanced. Photo IDs: 091112-01 through 091012-02.</p> <p>AMEC: Geotechnical Engineer provided oversight of on-site QC testing performed by Moretrench and trench exvavation activities. Geotechnical Engineer made all final determination of trench depths and if refusal criteria had been met at each 10 foot station. Geotechnical Engineer completed on site Fine Content % of backfill mixes.</p> <p>Moretrench: Continued mixing slurry and filling tanks as needed. Continued backfill mixing with excavator. Completed excavation of trench from 7+80 to 8+20. Backfilled trench with 2 1/2 batches of backfill. Backfill complete up to station 7+00. Backfill quantities summarized on Trench Profile submitted under separte cover the USACE representatives. Performed all required on-site QC testing. Isolated slurry into tnaks 1 and 2 and began cleaning tank 3. General site clean-up at end of the shift.</p> <p>Final Trench Depths at 10 foot stations during the day:</p> <table border="1"> <thead> <tr> <th>Station</th> <th>Final Trench Depth</th> </tr> </thead> <tbody> <tr> <td>7+90</td> <td>37.7'</td> </tr> <tr> <td>8+00</td> <td>39.6'</td> </tr> <tr> <td>8+10</td> <td>39.2'</td> </tr> <tr> <td>8+20</td> <td>39.1'</td> </tr> </tbody> </table> <p>Materials Brought on Site:</p> <p>75 cys of Imported Clay Borrow for backfill mix (W.J. Graves)</p> <p>Equipment Brought on Site:</p> <p>No additional equipment brought on-site during the day.</p> <p>Additional Notes:</p> <p>Bill Brandon with US EPA on site during the day. Give a site walk-through and updated on progress of the project.</p> <p>No major comments or conerns noted.</p> <p><b>Verbal Instructions given by Government:</b><br/>         No verbal instructions given by the government during the day.</p> <p><b>Safety Inspection / Safety Meetings:</b><br/>         Tailgate Safety Meeting held prior to start of day's work activities. Site HASP and applicable AHA's eviuewed prior to start of work activties.</p> |                    |                                          |             | Station | Final Trench Depth | 7+90 | 37.7' | 8+00 | 39.6' | 8+10 | 39.2' | 8+20 | 39.1' |
