Underground Storage Tank Closure  
1,000 Gallon No. 2 Fuel Oil - UST No. 0038  
Building 2519  
Fort Devens, Massachusetts  
ATEC File: 37.07.91.07451

Mr. Kruzewski:

Attached is a report by ATEC Associates, Inc. (ATEC), detailing the results of the closure of one (1) 1,000 gallon, single wall, steel Underground Storage Tank (UST) referenced as UST No. 0038, located at property known as Building 2519, Fort Devens, Massachusetts. The purpose of the closure was to excavate the UST and to evaluate the potential for the presence of oil and hazardous material at the site.

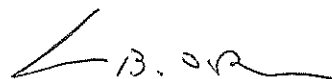

ATEC appreciates the opportunity to be of service in this matter. If you have any questions or comments, please do not hesitate to contact our office.

Sincerely,

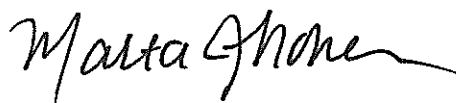

ATEC Associates, Inc.

Division Manager

## **EXECUTIVE SUMMARY**

On January 21, 1992, ATEC closed one (1) 1,000 gallon, single wall, steel Underground Storage Tank (UST) located at property known as Building 2519, Fort Devens, Massachusetts. The purpose of the closure was to excavate the UST and to evaluate the potential for the presence of oil and hazardous material at the site.

ATEC's conclusions are as follows:

1. Upon excavation and removal, the tank was observed to be in good condition with no holes or perforations. Some moderate rusting of the tank was noted, and the fill pipe was observed to be broken at the connection with the tank.
2. Ground water was not encountered within the excavation.
3. All excavated soils required to free the tank were visibly contaminated. Soil within the excavation were observed to be stained and grossly contaminated. A strong petroleum odor was evident.
4. Ten (10) soil samples were obtained from the excavation for field screening and field analysis utilizing a PID and NDIR Analysis respectively. PID readings ranged from 3.4 ppm to 146 ppm. NDIR results ranged from 852.2 ppm to 15,687.6 ppm TPH.
5. Two (2) soil samples were obtained from the excavation for laboratory analysis for TPH utilizing USEPA Extraction Method 9071 and Analysis Method (draft) 9073. Analytical results for LSS-1 obtained from the south wall of the excavation revealed 25,000 ppm TPH. Analytical results for LSS-2 obtained from the bottom of the excavation revealed 23,200 ppm TPH.
6. One (1) composite, soil sample (LSS-3) was obtained from stockpiled soils for laboratory analysis. Analytical results for LSS-3 revealed 4,750 ppm TPH.

ATEC's recommendations are as follows:

1. Conduct remedial excavation until background levels of <100 ppm TPH by laboratory analysis is attained. Field screening of soil should be conducted during excavation utilizing a Photoionizing Detector until background levels of <1 ppm are attained prior to obtaining samples for laboratory analysis.
2. Advance soil borings and install ground water monitoring wells to determine the vertical and horizontal extent of contamination. Continuous split spoon sampling and analysis will be conducted utilizing field analysis techniques, i.e. Photoionization Detector and Non-Dispersive Infrared Analysis, and laboratory analysis to document soil contamination levels as specified in the Hazardous Waste Containment Plan.
3. Stockpiled soils should be laboratory analyzed for Total Petroleum Hydrocarbons, Volatile Organic Compounds, PCBs, 13 TCLP Metals, flashpoint, corrosivity, sulfide reactivity, and cyanide reactivity for disposal classification.

## **POST-REMOVAL REPORT**

### **United States Army Reserve Center**

**Building 2519**

**Fort Devens, Massachusetts**

**ATEC Project No. 37.07.91.07451**

### **1.0 INTRODUCTION**

This Post-Removal Report details the results of the closure of one (1) 1,000 gallon, single wall, steel, Underground Storage Tank (UST) referenced as UST No. 0038, located at property known as Building 2519, Fort Devens, Massachusetts. The purpose of the closure was to excavate the UST, evaluate the potential for the presence of oil and hazardous material at the site. The closure of this UST was conducted on January 21, 1992.

The basic Project Work Scope included:

1. Procurement/administration of all federal, state and local permits, manifests, regulations, etc., associated with UST system closure.
2. Excavating, venting, cleaning, transporting, and disposing of one (1) 1,000 gallon UST by appropriately licensed contractors/facilities.
3. Disposal of UST slops at a licensed facility.
4. Field screening and analysis of soil in the excavations by Photoionizing Detector (PID) and field analyzed with a portable Non-Dispersive Infrared (NDIR) Analyzer, to identify evidence release of oil and hazardous materials from the UST, if any.

5. Laboratory Analysis of soil sampled from the UST excavation by a US EPA certified laboratory for Total Petroleum Hydrocarbons (USEPA Extraction Method 9071 and Analysis Method (draft) 9073).
6. Preparation of a Post-Removal Report, to include assimilation of information gathered; major findings; and conclusions.

## **2.0 SUBSURFACE STORAGE TANK EXCAVATION AND REMOVAL**

On January 21, 1992, one (1), 1,000 gallon, subsurface, No. 2 fuel oil, storage tank was excavated and removed from the site. The UST was located adjacent to the north side of Building 2519. Site topography is level. There is a slight upgradient slope approximately 100 feet to the southeast of the site.

Soils in the excavation consisted primarily of medium brown, fine sand with some medium to coarse gravel, cobbles, and boulders. The tank was covered by approximately 1.5 feet of soil. The bottom of the excavation was approximately 5.5 feet below grade. Ground water was not encountered within the excavation. All excavated soils required to free the tank were visibly contaminated. Soil removed from above the tank were visibly stained. Within the excavation, soil was observed to be grossly contaminated. A strong petroleum odor was evident.

Associated piping was drained, and tank connections were removed. UST No. 0038 was estimated to contain 48 gallons of No. 2 fuel oil and sludges. Approximately 13 gallons of fuel oil was removed on January 7, 1992, and transported to a licensed T.S.D.F. (Beede Waste Oil Corporation). Approximately 35 gallons of fuel oil and sludges were removed and drummed on January 21, 1992 for transportation at a later date. Tank openings were capped, and the tank was removed from the excavation. Upon excavation and removal, the tank was observed to be in good condition with no holes or perforations. Some surficial to moderate rusting of the tank was noted, and the fill pipe was observed to be broken at the connection with the tank. Following venting of the tank, an access way was cut in the end of the tank to allow entry for cleaning. It was then entered and vacuumed/wiped clean of any residual slops.

# **UST LOCATION PLAN**

1,000 gallon UST relative to:  
 Building 2519  
 Fort Devens, Massachusetts

PROJECT: 37.07.91.07451

NOT TO SCALE

FIGURE: 1

The scrap tank was removed from the site on January 21, 1992 and transported to the Contractor's yard, Lake George Street, Fort Devens for temporary storage. The tank was disposed at Tombarello & Sons, a licensed Massachusetts tank yard, on January 28, 1992. A copy of the disposal receipt is included in Appendix G.

### **3.0 SAMPLING AND ANALYSIS PLAN**

Ten (10) soil samples were obtained from the excavation for field screening with a Photoionizing Detector (PID) and field analyzed with a Non-Dispersive Infrared (NDIR) Analyzer. The PID field screening for Volatile Organic Compound (VOC) vapors was conducted with an HNu photoionizer utilizing the jar headspace screening protocol outlined in the Hazardous Materials Containment Plan. The NDIR field screening for Total Petroleum Hydrocarbons (TPH) was conducted with a Horiba OCMA 220, utilizing the procedures outlined in the Hazardous Materials Containment Plan.

Eight (8) of the samples (SS-1 to SS-8) were obtained from the excavation walls at a depth of approximately 2.5 - 3.5 feet below grade. Two (2) of the samples (SS-9 and SS-10) were obtained from the bottom of the excavation at a depth of approximately 5.5 feet below grade. Two (2) composite soil sample (Stock-1 and Stock-2) were obtained from stockpiled soils for PID and NDIR field screening. Sampling locations for the excavation are depicted on the Sampling Schematic attached as Figure 2.

Two (2) soil samples (LSS-1 and LSS-2) were obtained from the excavation for laboratory analysis. Soil Sample LSS-1 was obtained from the south wall of the excavation. Soil sample LSS-2 was obtained from the bottom of the excavation. One (1) composite, soil sample (LSS-3) was obtained from stockpiled soils required to free the tank. These samples were analyzed for TPH utilizing USEPA Extraction Method 9071 and Analysis Method (draft) 9073. Sampling locations are depicted on the Sampling Schematic attached as Figure 2.

The appropriate chain of custodies are included in Appendix E.

#### 4.0 ANALYTICAL RESULTS

The results from analysis with the Photoionization Detector (PID) and the Non-Dispersive Infrared (NDIR) Analyzer of the ten (10) soil samples obtained from the excavation, and the two (2) composite samples obtained from stockpiled soil are as follows:

**TABLE 1 - PID AND NDIR RESULTS**

Sample No.	PID (ppm)	NDIR(ppm)
SS-1	132	13,511.1
SS-2	66.0	15,300.0
SS-3	146	8,674.7
SS-4	60.0	10,541.9
SS-5	31.0	12,240.0
SS-6	3.4	2,544.2
SS-7	61.0	852.2
SS-8	76.0	15,687.6
SS-9	91.0	11,322.0
SS-10	52.0	9,351.4
Stock-1	64.0	5,370.5
Stock-2	75.0	5,105.9

N.D. = None Detected

Laboratory analytical results of the two (2) soil samples obtained from the excavation revealed 25,000 ppm TPH for LSS-1, and 23,200 ppm TPH for LSS-2. Laboratory analysis of the one (1) soil sample obtained from the stockpiled soils revealed 4,750 ppm TPH for LSS-3. See Appendix D.

## **5.0 CONCLUSIONS AND RECOMMENDATIONS**

ATEC's conclusions are as follows:

1. Upon excavation and removal, the tank was observed to be in fair condition with no holes or perforations. Some moderate rusting was noted, and the fill pipe was observed to be broken at the connection with the tank.
2. Ground water was not encountered within the excavation.
3. All excavated soils required to free the tank were visibly contaminated. Soil within the excavation were observed to be stained and grossly contaminated. A strong petroleum odor was evident.
4. Ten (10) soil samples were obtained from the excavation for field screening and field analysis utilizing a PID and NDIR Analysis respectively. PID readings ranged from 3.4 ppm to 146 ppm. NDIR results ranged from 852.2 ppm to 15,687.6 ppm TPH.
5. Two (2) soil samples were obtained from the excavation for laboratory analysis for TPH utilizing USEPA Extraction Method 9071 and Analysis Method (draft) 9073. Analytical results for LSS-1 obtained from the south wall of the excavation revealed 25,000 ppm TPH. Analytical results for LSS-2 obtained from the bottom of the excavation revealed 23,2000 ppm TPH.
6. One (1) composite, soil sample (LSS-3) was obtained from stockpiled soils for laboratory analysis. Analytical results for LSS-3 revealed 4,750 ppm TPH.

ATEC's recommendations are as follows:

1. Conduct remedial excavation until background levels of <100 ppm TPH by laboratory analysis is attained. Field screening of soil should be conducted during excavation utilizing a Photoionizing Detector until background levels of <1 ppm are attained prior to obtaining samples for laboratory analysis.

2. Advance soil borings and install ground water monitoring wells to determine the vertical and horizontal extent of contamination. Continuous split spoon sampling and analysis will be conducted utilizing field analysis techniques, i.e. Photo-ionization Detector and Non-Dispersive Infrared Analysis, and laboratory analysis to document soil contamination levels as specified in the Hazardous Waste Containment Plan.
3. Stockpiled soils should be laboratory analyzed for Total Petroleum Hydrocarbons, Volatile Organic Compounds, PCBs, 13 TCLP Metals, flashpoint, corrosivity, sulfide reactivity, and cyanide reactivity for disposal classification.

## **6.0 CERTIFICATIONS & QUALIFICATIONS**

This report is addressed to Mr. Robert J. Kruzewski, Contracting Officer of Directorate of Contracting, United States Army, Fort Devens with respect to UST No. 0038, located at property known as Building 2519, Fort Devens, Massachusetts (the site).

ATEC certifies that to the best of their professional knowledge, information and belief:

The investigation of the site described in the report was performed by Mark E. Baldi, Quality Control Manager; and James B. O'Brien, Group Manager (site investigators) who are qualified to make the investigations and formulate the opinions herein set forth.

The site investigators are familiar with the current provisions of the State of Massachusetts General Law Chapter 148; 527 CMR 9.00; and 502 CMR 3.00.

The site investigators are knowledgeable regarding the types of industrial, manufacturing, commercial or other processes or operations which might reasonably be expected to generate, use, treat, store or dispose of oil or hazardous material.

The site investigators have reviewed the recent history of the site and have considered the potential for the generation, use, treatment, storage, or disposal of oil or hazardous material by (a) the uses presently associated with the site and (b) to the extent ascertainable by inquiry, as noted.

In January 1992, the site investigators studied the site and, except as herein qualified, the areas in the vicinity of the site to assess the possible presence of oil and hazardous material at the site.

The following qualifications apply to ATEC's opinion:

Our professional services have been performed, our findings obtained and our recommendations prepared in accordance with customary principles and practices in the fields of environmental science and engineering. This warranty is in lieu of all other warranties either expressed or implied. This company is not responsible for the independent conclusions, opinions or recommendations made by others based on the field exploration and laboratory test data presented in this report.

The work performed in conjunction with this assessment and the data developed are intended as a description of available information at the dates and locations given. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.
