UNDERGROUND STORAGE TANK CLOSURE REPORT
UST NO. T-3773

EXECUTIVE SUMMARY

The subject 10,000-gallon fiberglass underground storage tank (UST) T-3773 located adjacent to Building #3773 was utilized to store #2 heating oil and was installed in 1984 by the United States Army. The tank was exposed, cleaned, and removed by Fleet Environmental Services on September 28, 1998. No groundwater, free product, or soil staining was observed in the excavation. Field screening methods, including soil jar headspace screening and Petroflag analysis on soil adjacent to the tank and associated piping indicated limited hydrocarbon impact. One composite confirmatory soil sample consisting of five aliquots was collected from the four tank grave sidewalls and the excavation base and analyzed for Extractable Petroleum Hydrocarbons (EPH) by Massachusetts Department of Environmental Protection (MADEP) Method 98-1. The analytical data was compared to applicable reportable concentrations for soil (RCS-1) which are outlined in the Massachusetts Contingency Plan (MCP) {310 CMR 40.0000}. Hydrocarbon contamination in excess of RCS-1 levels was not identified. Based upon the field screening results and the laboratory data, the tank grave was backfilled, compacted and the grass area restored.

UNDERGROUND STORAGE TANK CLOSURE REPORT
UST NO. T-3773

1.0 INTRODUCTION

This underground storage tank (UST) Closure report has been prepared in accordance with the Commonwealth of Massachusetts UST Closure Assessment Manual, dated April 6, 1996. Project specifications prepared for Mass Development at the Devens Commerce Center (DCC) including the UST Closure Protocol Addendum to Tier 1A Permit dated June 14, 1996, Project Specifications dated March 24, 1998, and the Release Abatement Measure Plan dated June 11, 1998, were also followed for the Multiple UST Removal project at the former United States Army base located in Devens, Massachusetts.

2.0 BACKGROUND

Tank T-3773 was located adjacent to Building #3773 on 78 Barnum Road at the Main Post of the U.S. Army Base in Devens, Massachusetts. Upon the closure of Fort Devens, ownership of the UST was transferred from the U.S. Army to Mass Development at the Devens Commerce Center. Pursuant to the Work Scope outlined in Administrative Consent Order ACO-CE-96-3001 issued by the Massachusetts Executive Office of Environmental Affairs to Mass Development for waste site cleanup in connection with the Fort Devens redevelopment, 99 USTs have been removed under this project.

The subject UST was located north of Building #3773, as illustrated in Figure 1. Global Positioning System (GPS) coordinates for the former tank location are 3024128 northing and 633539 easting. GPS data was collected in order to verify the tank location in the absence of current physical reference points. The United States Army installed the subject 10,000-gallon fiberglass UST in 1984. The tank was used to store #2 heating fuel and was installed with fiberglass straps and anchors. The associated tank piping included one 1-inch PVC insulated pipe containing three ½-inch copper lines leading to a boiler inside of the building.

UNDERGROUND STORAGE TANK CLOSURE REPORT
UST NO. T-3773

3.0 UST REMOVAL

The subject UST was uncovered, cleaned and removed on September 28, 1998. Fleet Environmental Services (Fleet) of Lakeville, Massachusetts removed the top of the tank using a Komatsu Excavator in order to enter and clean the inside of the tank. A vacuum truck was used to remove the remaining #2 fuel oil, tank sludge, and residual water and product generated during tank cleaning activities. After cleaning procedures, the tank was pulled from the excavation and inspected by the Devens Fire Department. The Closure Permit for the subject UST is provided in Appendix A. The tank was stored at Fleet's onsite staging area located in a fenced area on Antietam Street, and subsequently demolished, placed in a roll-off container and hauled for disposal as demolition debris to Browning Ferris Industries (BFI) in Fall River, Massachusetts. Liquid generated during tank closure was transferred from the vacuum truck to a storage tanker located at Fleet's staging area and later hauled for disposal to Global Oil in Revere, Massachusetts. Appendix B includes documentation for oil disposal generated from the subject UST and various other onsite #2 fuel oil USTs. Soil removed during the tank excavation was stockpiled adjacent to the tank grave and the hole was temporarily secured with CAUTION tape. No impacted material that required off-site disposal was generated during the tank removal.

4.0 FIELD OBSERVATIONS

Upon removal, the UST was observed to be in good condition with no holes, external staining or indications of damage. Groundwater, free product or visual evidence of stained soils was not observed in the excavation. In order to better view and screen the entire tank grave, the excavator removed sloughed soil along the excavation base and sidewalls. The tank grave base and four sidewalls were initially screened in at least two different locations using a Photoionization Detector (PID).

UNDERGROUND STORAGE TANK CLOSURE REPORT
UST NO. T-3773

One composite soil sample, consisting of five aliquots from the base of the excavation and four sidewalls at a depth of 8' - 12' below ground surface (bgs), was collected with the excavator bucket. The sample was composited using a stainless steel sample spoon and bowl. Prior to sample collection, the spoon and bowl were decontaminated with non-phosphate soap and water. The composite sample was placed in amber glass soil jars for soil headspace, Petroflag and laboratory analyses. Figure 1 presents PID headspace and Petroflag results as well as confirmatory sample locations.

Soil jar headspace screening analysis was conducted in accordance with Appendix A of the Massachusetts Department of Environmental Protection UST Closure Manual. Two jars for soil headspace were covered with aluminum foil and set aside for a minimum of ten minutes. No jar headspace reading greater than 0.1 parts per million (ppm) was recorded.

Petroflag hydrocarbon analysis was then conducted on ten grams of soil from the initial composite sample. Petroflag analysis consists of a liquid extraction and analysis of soil combined with a chemical reagent. Petroflag is most effective for heavy oils such as #2 and #4 fuel oils and gives an estimate of hydrocarbon concentrations in a given sample. A Petroflag reading of 70 ppm for the composite sample was recorded.

5.0 LABORATORY ANALYTICAL RESULTS

Based on the PID and Petroflag screening results, no further excavation was conducted and the composite sample was sent to AMRO Laboratory in Merrimack, New Hampshire. The composite sample was analyzed by Massachusetts Department of Environmental Protection (MADEP) Method 98-1 for Extractable Petroleum Hydrocarbons (EPH). As outlined in the project specifications, a list of four fuel oil-related polynuclear aromatic hydrocarbons (PAHs), which are specific target analytes of the C₁₁-C₂₂ aromatic hydrocarbon range, are included with the EPH analytical data and presented in Appendix C. Analytical results for the composite sample

UNDERGROUND STORAGE TANK CLOSURE REPORT
UST NO. T-3773

indicated the absence of hydrocarbon impact in excess of the most stringent MADEP Massachusetts Contingency Plan Reportable Concentrations for soil (RCS-1).

6.0 BACKFILLING

Stockpiled soil and off-site backfill material were used to fill the excavation. The hole was backfilled in approximately 18-inch lifts, sprayed with water, and compacted using the excavator bucket and a vibrating roller. No nuclear density compaction tests were completed during backfilling procedures. The excavation was backfilled to grade and the grass area restored.

7.0 CONCLUSIONS

Removal of the subject fiberglass UST was conducted in accordance with the Commonwealth of Massachusetts UST Closure Assessment Manual and the project specifications as outlined for Mass Development at the Devens Commerce Center. The tank was cleaned, removed, inspected, crushed, and hauled in a roll-off container with other fiberglass tanks removed during the course of the project. Residual product, sludge and water was removed with a vacuum truck and was hauled to an oil recycling facility in bulk quantity with other on-site #2 fuel UST liquids. No groundwater, free product, or soil staining was observed in the excavation. Soil screening results including PID headspace and Petroflag analyses indicated limited hydrocarbon impact to soils in the tank grave. One composite soil sample consisting of five aliquots from the four excavation sidewalls and the base was collected and analyzed for EPH by a Massachusetts-certified laboratory. Analytical results indicated the absence of hydrocarbon impact in excess of the MADEP MCP (RCS-1) Reportable Concentrations. Based upon the analytical data and field screening results, the excavation was backfilled, compacted and the grass area restored.

Received, subject to the classifications and tariffs in effect on the date of this Bill of Lading:

at DEVENS, MA

date 12-17-98 from DEVENS, MA

I, the property described below, in apparent good order, except as noted (contents and condition of contents of packages unknown), marked, consigned, and destined as indicated below, which said company (the word company being understood throughout this contract as meaning any person or corporation in possession of the property under the contract) agrees to carry to its usual place of delivery at said destination, if on its own road or its own water line, otherwise to deliver to another carrier on the route to said destination. It is mutually agreed, as to each carrier of all or any of said property over all or any portion of said route to destination, and as to each party at any time interested in all or any of said property, that every service to be performed hereunder shall be subject to all the conditions not prohibited by law, whether printed or written, herein contained, (as specified in Appendix B to Part 1035) which are hereby agreed to by the shipper and accepted for himself and his assigns.

Mr. Brian House
Fleet Environmental Svc., LLC
8 Harding St.
Lakeville, MA 02347

RE Your project: 980340 Devens/Fleet Env.

Dear Brian:

Enclosed please find the results for the above-referenced project, received on September 28, 1998. AMRO operates a Quality Control Program which meets or exceeds EPA and state requirements. A copy of the appropriate State Certificate is attached. The enclosed Sample Receipt Checklist details the condition of your sample upon receipt. No quality control deviations which impact the enclosed results were noted during the analyses associated with this project. This project was assigned AMRO Project Number 20464. If you have any questions regarding this project in the future, please refer to this number.

Please be advised that any unused sample volume and sample extracts will be stored for a period of thirty (30) days from this report date. After this time, AMRO will properly dispose of the remaining sample. If you require further analysis, or need the samples held for a longer period, please contact us immediately.

This letter is an integral part of your data report.

Please do not hesitate to call if you have any questions.

Sincerely,

for/ Richard Ravenelle
Organics Laboratory Manager

Encl.

Laboratory Report Extractable Petroleum Hydrocarbons (EPH)

EPH ANALYTICAL RESULTS

Extraction Method: EPA 3541	Client ID	T-3773	
Method for Ranges: MADEP EPH 98-1			
Method for Target Analytes: MADEP EPH 98-1	AMRO Lab ID	20464-02	
EPH Surrogate Standards - Extraction Aliphatic: 1-Chlorooctadecane Aromatic: o-Terphenyl	Date Collected	09/28/98	
	Date Received	09/28/98	
	Date Extracted	09/29/98	
EPH Surrogate Standards - Analysis 2-Fluorobiphenyl 2-Bromonaphthalene	Date Analyzed	10/02/98	
	Dilution Factor	1	
	% Solids	93.6	
Range/Target Analyte	UNITS	RESULTS	RL
C ₉ -C ₁₈ Aliphatic Hydrocarbons ¹	mg/Kg	ND	51
C ₁₉ -C ₃₆ Aliphatic Hydrocarbons ¹	mg/Kg	ND	51
C ₁₁ -C ₂₂ Aromatic Hydrocarbons ^{1,2,3}	mg/Kg	ND	26
Naphthalene	mg/Kg	ND	0.26
2-Methylnaphthalene	mg/Kg	ND	0.26
Acenaphthene	mg/Kg	ND	0.26
Phenanthrene	mg/Kg	ND	0.26
2-Fluorobiphenyl % Recovery	%	90.1	N/A
2-Bromonaphthalene % Recovery	%	85.9	N/A
o-Terphenyl % Recovery	%	63.9	N/A
1-Chlorooctadecane % Recovery	%	57.1	N/A
Surrogate Acceptance Range	%	40-140%	40-140%

¹ Hydrocarbon Range data exclude concentrations of any surrogate(s) and/or internal standards eluting in that range

² C₁₁-C₂₂ Aromatic Hydrocarbons exclude the concentration of Target PAH Analytes

³ Reporting limit based on calculated MDL, not the prescribed procedure in MADEP EPH Revision 1.0 method.

N/A = Not Applicable

ND = Not Detected at or above the Reporting Limit (RL) indicated.

COMMENTS:

CERTIFICATION

Were all QA/QC procedures REQUIRED by the EPH Method followed?	[X] Yes [] No - See Comments
Were all performance/acceptance standards for required QA/QC procedures achieved?	[X] Yes [] No - See Comments
Were any significant modifications made to the EPH method, as specified in Sect 11.3?	[] No [X] Yes - Details attached

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Volatile Petroleum Hydrocarbons (VPH)
Massachusetts Department of Environmental Protection (MADEP)
Method 1.0 - January 1998
AMRO Modifications

This modification is based on the use of a purge and trap gas chromatography mass spectrometer (GCMS) system to analyze samples for VPH. The hydrocarbon ranges are quantified using predominant mass fragmentation ions which are characteristic for the range being measured. This approach eliminates potential false positives for the target analytes while providing accurate hydrocarbon range data.

The chromatographic column is an HP-624 capillary column which has been validated by GCMS analysis of a gasoline standard to correctly identify the marker compounds and elution order of specific gasoline components. Batch quality control includes, at a minimum, method blank, laboratory control sample, and duplicate analysis. A matrix spike and/or matrix spike duplicate is analyzed if sufficient sample is submitted to the laboratory.

The Reporting Limit (RL) of this method for each of the collective aliphatic and aromatic ranges is approximately 0.6-2.8 mg/kg in soil and 25-110 µg/L in water. The RL of this method for the target analytes ranges from approximately 0.05-0.13 mg/kg in soil and 2.0-5.0 µg/L for water samples.

Extractable Petroleum Hydrocarbons (EPH)
Massachusetts Department of Environmental Protection (MADEP)
Method 1.0 - January 1998
AMRO Modifications

This modification is based on a solvent extraction and gas chromatography mass spectrometer (GCMS) analysis. The hydrocarbon ranges are quantified using predominant mass fragmentation ions which are characteristic for the range being measured. This approach eliminates the silica gel solid-phase fractionation step. False positives for targeted PAH analytes are eliminated by using GCMS as the primary analysis technique.

The chromatographic column is a J&W Scientific DB-5ms capillary column. Internal standard calibration is performed using 5 α -Androstane at a concentration of 40 ng/µL. o-Terphenyl and 1-Chlorooctadecane are added as surrogate compounds at 20 ng/µL in the sample extract. These two surrogates monitor the effects of the sample matrix and extraction efficiency. Two additional surrogates, 2-Fluorobiphenyl and 2-Bromonaphthalene, are added to the finished extract prior to analysis to monitor instrument performance. Batch quality control includes, at a minimum, a procedure blank, laboratory control sample and duplicate sample analysis. A matrix spike is analyzed if sufficient sample is submitted to the laboratory.
