Were samples preserved properly and received in good condition?	•			
Were holding times met?		•		Following samples were analyzed outside of testing hold time and results were qualified with UJ/H1 flags/codes if non-detect and J/H1 flag/codes if detected: --002RA2. Note: sample -001RA and -003RA H1 flags were removed since they were analyzed on the 14th day of a 14 day holding time.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		1 of 4 surrogates biased low in client sample -001RA. All results qualified as estimated with I reason code.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG285867-2, WG286120-2 and WG285324-2 method blanks had detections below the LOQ for methylene chloride. Client samples -001RA, -003RA, -002RA2, -004 methylene chloride results were qualified as non-detect at the LOD or LOQ and qualified with U flags and L reason codes.
Were target analytes in the field blank less than MDL?		•		Trip blank was non-detect but equipment blank methylene chloride detection was qualified as non-detect at the LOD due to method blank detection noted above.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS ONLY
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		Internal standard and calibration outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data rejected during the verification process?		•		

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Samples -004 and -004RE had 1 of 3 acid fraction surrogates biased low so all acid fraction analytes were qualified as estimated with UJ/I flags/reason codes. Base-neutral flags were removed from data base for both samples since all BN surrogate recoveries were acceptable.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batches WG285330-1 and WG28454-1 haddetections above the LOQ for bis-2-ethylhexylphthalate. Client samples -001, -002,-003, -004RE results for this analyte were qualified as estimated with J+.
Were target analytes in the field blank less than MDL?		•		Diethyl phthalate was detected in equipment blank.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batches WG285387-2 and WG285454-2 had high bias recoveries for benzaldehyde. Qualification was not required based on this high bias outlier. QC batch WG285330-2 has a high bias for 3,3-dichlorobenzidine and bis-2-ethylhexylphthalate. Client samples -001, -002 and -003 results for this analyte were qualified with C reason code but flagged non-detect at LOQ due to method blank detection noted above.
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICV and calibration outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data rejected during the verification process?		•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN7314. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 226 results (27.63%) out of the 818 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

REVISION SUMMARY - Narrative Comments

REVISION SUMMARY: Database field duplicate linked samples issues for associations -001/-003 and -002/-004 have been corrected in database and flagging and DVR revised accordingly. Flagging changes as follows: Samples -001 and -003 J/D3 flag reason code removed for beryllium and added for calcium.

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW3-B-AUG2020 (N)/ SN7314-3	Indeno(1,2,3-c,d)pyrene	100.0	< 50	< 50	rpd	J/UJ	D3	
NHFLA-MW3-B-AUG2020 (N)/ SN7314-3	Benzo (g,h,i)perylene	114.3	< 50	< 50	rpd	J/UJ	D3	
NHFLA-MW3-B-AUG2020 (N)/ SN7314-3	Phenanthrene	59.26	< 50	< 50	rpd	J/UJ	D3	
NHFLA-MW3-B-AUG2020 (N)/ SN7314-3	Fluoranthene	80.00	< 50	< 50	rpd	J/UJ	D3	
NHFLA-MW3-B-AUG2020 (N)/ SN7314-3	Dibenz (a,h)anthracene	83.00	< 19	< 19	ug/kg	J/UJ	D3	
NHFLA-MW3-B-AUG2020 (N)/ SN7314-3	Benzo (a)anthracene	85.00	< 50	< 50	rpd	J/UJ	D3	
NHFLA-MW3-B-AUG2020 (N)/ SN7314-3	Pyrene	85.71	< 50	< 50	rpd	J/UJ	D3	
NHFLA-MW3-B-AUG2020 (N)/ SN7314-3	Benzo (k)fluoranthene	87.18	< 50	< 50	rpd	J/UJ	D3	
NHFLA-MW3-B-AUG2020 (N)/ SN7314-3	Benzo (b)fluoranthene	88.00	< 50	< 50	rpd	J/UJ	D3	
NHFLA-MW3-B-AUG2020 (N)/ SN7314-3	Chrysene	90.11	< 50	< 50	rpd	J/UJ	D3	
NHFLA-MW3-B-AUG2020 (N)/ SN7314-3	Benzo(a)pyrene	96.91	< 50	< 50	rpd	J/UJ	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285464-1 (LB)/ WG285464-1	Chrysene	1.800	< 1.7	< 20	ug/kg	U/None	L	
WG285464-1 (LB)/ WG285464-1	Phenanthrene	1.800	< 1.8	< 20	ug/kg	U/None	L	
WG285464-1 (LB)/ WG285464-1	Pyrene	2.300	< 2.1	< 20	ug/kg	U/None	L	
WG285464-1 (LB)/ WG285464-1	Fluoranthene	2.500	< 1.8	< 20	ug/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285452-2 (BS)/ WG285452-2	Dibenz (a,h)anthracene	40.90	44 - 131	10 - 131	percent	J/UJ	C	
WG285452-2 (BS)/ WG285452-2	Indeno(1,2,3-c,d)pyrene	45.40	48 - 130	10 - 130	percent	J/UJ	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB9-AUG2020	EB	Dibenz(a,h)anthracene	0.190	0.0960 UL	0.0960 UJ		ug/l	C
NHFLA-EB9-AUG2020	EB	Indeno(1,2,3-c,d)pyrene	0.190	0.0960 UL	0.0960 UJ		ug/l	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method BNASIM, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS3-AUG2020 (MS)/ WG285464-4	Anthracene	125.4	50 - 114	10 - 114	percent	J/None	M	
NHFLA-MS3-AUG2020 (MS)/ WG285464-4	Benzo (k)fluoranthene	145.2	56 - 123	10 - 123	percent	J/None	M	
NHFLA-MS3-AUG2020 (MS)/ WG285464-4	Dibenz (a,h)anthracene	146.0	50 - 129	10 - 129	percent	J/None	M	
NHFLA-MS3-AUG2020 (MS)/ WG285464-4	Fluoranthene	1667	55 - 119	10 - 119	percent	J/None	M	Spike amount Insignificant
NHFLA-MS3-AUG2020 (MS)/ WG285464-4	Pyrene	1750	55 - 117	10 - 117	percent	J/None	M	Spike amount Insignificant
NHFLA-MS3-AUG2020 (MS)/ WG285464-4	Chrysene	227.3	57 - 118	10 - 118	percent	J/None	M	Spike amount Insignificant
NHFLA-MS3-AUG2020 (MS)/ WG285464-4	Benzo (b)fluoranthene	2500	53 - 128	10 - 128	percent	J/None	M	Spike amount Insignificant
NHFLA-MS3-AUG2020 (MS)/ WG285464-4	Benzo(a)pyrene	318.2	50 - 125	10 - 125	percent	J/None	M	Spike amount Insignificant
NHFLA-MS3-AUG2020 (MS)/ WG285464-4	Benzo (a)anthracene	363.6	54 - 122	10 - 122	percent	J/None	M	Spike amount Insignificant
NHFLA-MS3-AUG2020 (MS)/ WG285464-4	Phenanthrene	761.9	49 - 113	10 - 113	percent	J/None	M	Spike amount Insignificant
NHFLA-MSD3-AUG2020 (SD)/ WG285464-5	Indeno(1,2,3-c,d)pyrene	-130.7	49 - 130	10 - 130	percent	J/X	M	
NHFLA-MSD3-AUG2020 (SD)/ WG285464-5	Benzo (k)fluoranthene	165.6	56 - 123	10 - 123	percent	J/None	M	
NHFLA-MSD3-AUG2020 (SD)/ WG285464-5	Fluoranthene	1731	55 - 119	10 - 119	percent	J/None	M	Spike amount Insignificant
NHFLA-MSD3-AUG2020 (SD)/ WG285464-5	Benzo (g,h,i)perylene	182.1	49 - 127	10 - 127	percent	J/None	M	
NHFLA-MSD3-AUG2020 (SD)/ WG285464-5	Pyrene	2692	55 - 117	10 - 117	percent	J/None	M	Spike amount Insignificant
NHFLA-MSD3-AUG2020 (SD)/ WG285464-5	Phenanthrene	297.0	49 - 113	10 - 113	percent	J/None	M	Spike amount Insignificant
NHFLA-MSD3-AUG2020 (SD)/ WG285464-5	Benzo (b)fluoranthene	47500	53 - 128	10 - 128	percent	J/None	M	Spike amount Insignificant
NHFLA-MSD3-AUG2020 (SD)/ WG285464-5	Chrysene	637.3	57 - 118	10 - 118	percent	J/None	M	Spike amount Insignificant
NHFLA-MSD3-AUG2020 (SD)/ WG285464-5	Benzo(a)pyrene	735.3	50 - 125	10 - 125	percent	J/None	M	Spike amount Insignificant
NHFLA-MSD3-AUG2020 (SD)/ WG285464-5	Benzo (a)anthracene	833.3	54 - 122	10 - 122	percent	J/None	M	Spike amount Insignificant

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method BNASIM, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS3-AUG2020 (SD)/ WG285464-5	Indeno(1,2,3-c,d)pyrene	152.0	< 22	< 22	ug/kg	J/UJ	D	
NHFLA-MS3-AUG2020 (SD)/ WG285464-5	Benzo (g,h,i)perylene	21.28	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS3-AUG2020 (SD)/ WG285464-5	Benzo(a)pyrene	22.22	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS3-AUG2020 (SD)/ WG285464-5	Chrysene	23.53	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS3-AUG2020 (SD)/ WG285464-5	Benzo (a)anthracene	25.35	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS3-AUG2020 (SD)/ WG285464-5	Benzo (b)fluoranthene	29.79	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS3-AUG2020 (SD)/ WG285464-5	Phenanthrene	48.78	< 20	< 20	rpd	J/UJ	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS RPD for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP4-AUG2020	FD	Benzo(a)anthracene	20.0	180 MM	180 J		ug/kg	D/M
NHFLA-DUP4-AUG2020	FD	Benzo(a)pyrene	20.0	200 MM	200 J		ug/kg	D/M
NHFLA-DUP4-AUG2020	FD	Benzo(b)fluoranthene	20.0	280 MM	280 J		ug/kg	D/M
NHFLA-DUP4-AUG2020	FD	Benzo(g,h,i)perylene	20.0	140 M	140 J	+	ug/kg	M/D
NHFLA-DUP4-AUG2020	FD	Chrysene	20.0	200 MM	200 J		ug/kg	D/M
NHFLA-DUP4-AUG2020	FD	Indeno(1,2,3-c,d)pyrene	20.0	140 M	140 J	-	ug/kg	M/D
NHFLA-DUP4-AUG2020	FD	Phenanthrene	20.0	160 MM	160 J		ug/kg	D/M
NHFLA-MW3-B-AUG2020	N	Benzo(a)anthracene	19.0	230	230 J		ug/kg	D/M
NHFLA-MW3-B-AUG2020	N	Benzo(a)pyrene	19.0	250	250 J		ug/kg	D/M
NHFLA-MW3-B-AUG2020	N	Benzo(b)fluoranthene	19.0	350	350 J		ug/kg	D/M
NHFLA-MW3-B-AUG2020	N	Benzo(g,h,i)perylene	19.0	150	150 J	+	ug/kg	M/D
NHFLA-MW3-B-AUG2020	N	Chrysene	19.0	250	250 J		ug/kg	D/M
NHFLA-MW3-B-AUG2020	N	Indeno(1,2,3-c,d)pyrene	19.0	140	140 J	-	ug/kg	M/D
NHFLA-MW3-B-AUG2020	N	Phenanthrene	19.0	190	190 J		ug/kg	D/M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method LYDKHN, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS3-AUG2020 (MS)/ WG285821-4	Total Organic Carbon	-40.40	75 - 125	30 - 150	percent	J/X	M	Spike amount Insignificant
NHFLA-MSD3-AUG2020 (SD)/ WG285821-5	Total Organic Carbon	11.78	75 - 125	30 - 150	percent	J/X	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for LYDKHN

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP4-AUG2020	FD	Total Organic Carbon	950	18000	18000 J	-	ug/g	M
NHFLA-MW3-B-AUG2020	N	Total Organic Carbon	680	23000	23000 J	-	ug/g	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method LYDKHN, Prep Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of extraction found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP3-AUG2020 (FD)/ SN7314-3		10.17	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-DUP4-AUG2020 (FD)/ SN7314-4		7.960	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-MW3-A-AUG2020 (N)/ SN7314-1		7.980	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-MW3-B-AUG2020 (N)/ SN7314-2		7.960	< 0	< 0	days	J/X	H2	Prep Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6010, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW3-B-AUG2020 (N)/ SN7314-3	Lead	68.74	< 50	< 50	rpd	J/UJ	D3	
NHFLA-MW3-B-AUG2020 (N)/ SN7314-4	Calcium	62.62	< 50	< 50	rpd	J/UJ	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Field Duplicate RPD for SW6010

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP3-AUG2020	FD	Calcium	22.0	62600	62600 J		mg/kg	D3
NHFLA-DUP4-AUG2020	FD	Calcium	9.60	29400 NEA	29400 J		mg/kg	D3
NHFLA-MW3-A-AUG2020	N	Calcium	49.0	196000	196000 J		mg/kg	D3
NHFLA-MW3-B-AUG2020	N	Calcium	17.0	56200	56200 J		mg/kg	D3

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6010, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBSNI02ICS1 (LB)/ PBSNI02ICS1	Nickel	0.04500	< 0.044	< 1	mg/kg	U/None	L	
PBSNI02ICS1 (LB)/ PBSNI02ICS1	Chromium	0.05800	< 0.026	< 1	mg/kg	U/None	L	
PBSNI02ICS1 (LB)/ PBSNI02ICS1	Magnesium	1.600	< 0.68	< 10	mg/kg	U/None	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6010, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS3-AUG2020 (SD)/ SN7314-004P	Aluminum	22.93	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS3-AUG2020 (SD)/ SN7314-004P	Potassium	29.63	< 20	< 20	rpd	J/UJ	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS RPD for SW6010

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP4-AUG2020	FD	Aluminum	29.0	13200 N*EA	13200 J		mg/kg	D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
LCSWNI02IMW2 (BS)/ LCSWNI02IMW2	Thallium	119.0	82 - 116	30 - 150	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7196, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB9-AUG2020 (EB)/ SN7314-5	Chromium, Hexavalent	0.003400	< 0.00076	< 0.025	mg/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7196, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285497-1 (LB)/ WG285497-1	Chromium, Hexavalent	0.002400	< 0.00076	< 0.025	mg/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB9-AUG2020	EB	Chromium, Hexavalent	0.0250	0.00340 J	0.0125 U		mg/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS3-AUG2020 (MS)/ WG286124-3	Chromium, Hexavalent	83.19	84 - 110	30 - 125	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP4-AUG2020	FD	Chromium, Hexavalent	0.560	0.340 U	0.340 UJ		mg/kg	M
NHFLA-MW3-B-AUG2020	N	Chromium, Hexavalent	0.550	0.330 U	0.330 UJ		mg/kg	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP3-AUG2020 (FD)/ SN7314-3		9.090	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-DUP4-AUG2020 (FD)/ SN7314-4		9.070	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-MW3-A-AUG2020 (N)/ SN7314-1		3.250	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-MW3-B-AUG2020 (N)/ SN7314-2		9.070	< 1	< 2	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7470, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBWNI02HGW1 (LB)/ PBWNI02HGW1	Mercury	0.01300	< 0.013	< 0.2	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7471, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MSD3-AUG2020 (SD)/ SN7314-004P	Mercury	78.54	80 - 124	30 - 125	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW7471

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP4-AUG2020	FD	Mercury	0.0310	0.0518 NA	0.0518 J	-	mg/kg	M
NHFLA-MW3-B-AUG2020	N	Mercury	0.0310	0.0450	0.0450 J	-	mg/kg	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB9-AUG2020 (EB)/ SN7314-5	Toluene	0.3000	< 0.27	< 1	ug/l	U/None	V	
NHFLA-EB9-AUG2020 (EB)/ SN7314-5	Methylene chloride	1.400	< 1.1	< 5	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG286120-2 (LB)/ WG286120-2	Methylene chloride	11.00	< 7.9	< 25	ug/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP3-AUG2020	FD	Methylene chloride	25.0	14.0 J	25.0 U		ug/kg	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS3-AUG2020 (SD)/ WG286120-7	Bromoform	20.51	< 20	< 20	rpd	J/UJ	D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW3-A-AUG2020 (N)/ SN7314-1	1-Bromo-4-fluorobenzene (4-Bromofluorobenzene)	70.80	79 - 119	10 - 119	percent	J/UJ	I	
NHFLA-MW3-B-AUG2020 (N)/ SN7314-2	1-Bromo-4-fluorobenzene (4-Bromofluorobenzene)	76.20	79 - 119	10 - 119	percent	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP3-AUG2020 (FD)/ SN7314-3		14.23	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-DUP4-AUG2020 (FD)/ SN7314-4		14.23	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW3-A-AUG2020 (N)/ SN7314-1		14.18	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW3-B-AUG2020 (N)/ SN7314-2		14.18	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, Trip Blank

The purpose of trip blanks is to determine the existence and magnitude of cross-contamination problems resulting from the shipping of samples. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in trip blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-TB10-AUG2020 (TB)/ SN7314-6	Methylene chloride	1.200	< 1.1	< 5	ug/l	U/None	T	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB9-AUG2020 (EB)/ SN7314-5	Bis(2-ethylhexyl)phthalate	13.00	< 1.6	< 9.6	ug/l	U/None	V	
NHFLA-EB9-AUG2020 (EB)/ SN7314-5	Diethyl phthalate	4.400	< 1.9	< 9.6	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285454-1 (LB)/ WG285454-1	Bis(2-ethylhexyl)phthalate	14.00	< 1.7	< 10	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB9-AUG2020	EB	Bis(2-ethylhexyl)phthalate	13.0	13.0 B	13.0 UJ		ug/l	L/I

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285465-1 (LB)/ WG285465-1	Bis(2-ethylhexyl)phthalate	2700	< 98	< 330	ug/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP3-AUG2020	FD	Bis(2-ethylhexyl)phthalate	1500	1500 BL	1500 U		ug/kg	L/C
NHFLA-DUP4-AUG2020	FD	Bis(2-ethylhexyl)phthalate	1400	1400 BL	1400 U		ug/kg	L/C
NHFLA-MW3-A-AUG2020	N	Bis(2-ethylhexyl)phthalate	760	760 BL	760 U		ug/kg	L/C
NHFLA-MW3-B-AUG2020	N	Bis(2-ethylhexyl)phthalate	1000	1000 BL	1000 U		ug/kg	L/C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285454-2 (BS)/ WG285454-2	Benzaldehyde	314.0	10 - 189	10 - 189	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285465-2 (BS)/ WG285465-2	Bis(2-ethylhexyl)phthalate	137.1	51 - 133	10 - 133	percent	J/None	C	
WG285465-2 (BS)/ WG285465-2	3,3'-Dichlorobenzidine	138.3	22 - 121	10 - 121	percent	J/None	C	
WG285465-2 (BS)/ WG285465-2	Benzaldehyde	268.3	10 - 134	10 - 134	percent	J/None	C	
WG285465-3 (BD)/ WG285465-3	Benzaldehyde	277.8	10 - 134	10 - 134	percent	J/None	C	
WG285465-3 (BD)/ WG285465-3	Caprolactam	40.24	46 - 117	10 - 117	percent	J/UJ	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP3-AUG2020	FD	Bis(2-ethylhexyl)phthalate	1500	1500 BL	1500 U		ug/kg	L/C
NHFLA-DUP3-AUG2020	FD	Caprolactam	310	240 UL	240 UJ		ug/kg	C
NHFLA-DUP4-AUG2020	FD	Bis(2-ethylhexyl)phthalate	1400	1400 BL	1400 U		ug/kg	L/C
NHFLA-DUP4-AUG2020	FD	Caprolactam	330	250 UL	250 UJ		ug/kg	C
NHFLA-MW3-A-AUG2020	N	Bis(2-ethylhexyl)phthalate	760	760 BL	760 U		ug/kg	L/C
NHFLA-MW3-A-AUG2020	N	Caprolactam	340	250 UL	250 UJ		ug/kg	C
NHFLA-MW3-B-AUG2020	N	Bis(2-ethylhexyl)phthalate	1000	1000 BL	1000 U		ug/kg	L/C
NHFLA-MW3-B-AUG2020	N	Caprolactam	320	240 UL	240 UJ		ug/kg	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS3-AUG2020 (MS)/ WG285465-4	Benzaldehyde	214.7	10 - 34	10 - 134	percent	J/None	M	
NHFLA-MSD3-AUG2020 (SD)/ WG285465-5	Benzaldehyde	225.8	10 - 34	10 - 134	percent	J/None	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB9-AUG2020 (EB)/ SN7314-5	2,4,6-Tribromophenol	42.60	43 - 140	10 - 140	percent	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Surrogate for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB9-AUG2020	EB	2,4,5-Trichlorophenol	24.0	18.0 U	18.0 UJ		ug/l	I
NHFLA-EB9-AUG2020	EB	2,4,6-Trichlorophenol	9.60	7.20 U	7.20 UJ		ug/l	I

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

SN7314					
Chromium, Hexavalent (Colorimetric) (SW7196/SW3060)	**Recovery Limit**	**RPD Limit**	**MS Percent Recovery**		
Chromium, Hexavalent (mg/kg)	84-110	20	83.2	0.550 UJ	

Notes:
Shaded cells identify any compounds that were outside the acceptable MS/MSD recovery limit.
Bold = Bolded result indicates positively identified compounds in the parent sample

µg/L = micrograms per liter
%R = percent recovery
ID = Identification
MS = Matrix Spike
MSD = Matrix Spike Duplicate
NA = Not Applicable
RPD = Relative Percent Difference
U = Compound was not detected and was reported at the limit of quantitation (LOQ).
VOC = volatile organic compound

UJ = The analyte was analyzed for, but was not detected. The reported LOQ is approximate.
J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

Notes:
Shaded cells identify any compounds that were outside the acceptable MS/MSD recovery limit.
Bold = Bolded result indicates positively identified compounds in the parent sample

µg/L = micrograms per liter
%R = percent recovery
ID = Identification
MS = Matrix Spike
MSD = Matrix Spike Duplicate
NA = Not Applicable
RPD = Relative Percent Difference
U = Compound was not detected and was reported at the limit of quantitation (LOQ).
VOC = volatile organic compound

UJ = The analyte was analyzed for, but was not detected. The reported LOQ is approximate.
J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

Automated Data Review Detail Report for SN7314
C02NY0079-02, Nike BU 51/52, Launch Area
Nike BU 51/52 Quality Assurance Project Plan

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
BNASIM/SW3550/NONE	1	1
SW6010/SW3050/NONE	4	25
SW7196/SW3060/NONE	4	4
SW8260/SW5035/NONE	1	2
SW8270/SW3510/NONE	1	1
SW8270/SW3550/NONE	4	33

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
BNASIM/SW3550/NONE	NHFLA-DUP3-AUG2020	FD	4	Benzo(a)pyrene	720	12.0	38.0	76.0	36.666666	ug/kg

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D	MS RPD
D3	Field Duplicate RPD
H1	Test Hold Time
H2	Prep Hold Time
I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
T	Trip Blank
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?	•			QC LCS WG285464-1 had 1 of 3 surrogates biased high which did not require qualification. Not reflected in data tables.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC WG285464-1 detections below the LOQ for phenanthrene, fluoranthene, pyrene, chrysene. Qualifications not required based on these method blank detections.
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		QC WG285452-2 low bias recoveries for indeno (123cd)pyrene and dibenzo(ah)anthracene. Sample -005 qualified as estimated with UJ/C flags/reason codes for these analytes. WG285464 RERUN QC was not used to qualify field sample results.
Was the LCS/LCSD RPD within project acceptance limits?		•		
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -004 MS recoveries were outliers biased high for multiple analytes, biased low for indeno (123cd)pyrene and had RPD outliers for multiple analytes. See MS QC outlier table for SIM analysis for details of M/D reason code flags. NOTE: sample -004 was field duplicate for parent sample -002 so both samples were qualified based on these sample -004 MS outliers.
Was the MS/MSD RPD within project acceptance limits?		•		Almost all target analytes had RPD outliers. Please reference MS QC outlier table for details.
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			Samples -001/-003 and -002/-004 were processed as parent/field duplicate pairs. All field duplicate flags were removed - see comments in SDG for details.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•		

Review Questions

Method: LYDKHN (Lloyd Kahn Method for the Determination of Total Organic Carbon in Sediment, USEPA Region II Method)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			Soil H2 qualifiers were removed since analysis was performed within project required holding times.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -004 MS/MSD recoveries biased low. Sample -004 and -002 qualified with J/C flags/reason codes.
Was the MS/MSD RPD within project acceptance limits?	•			
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•		

Review Questions

Method: SW6010 (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC NI02ICS1 detections below LOQ for aluminum, calcium, chromium, magnesium, nickel, potassium, sodium and QC NI04ICS1 detections below LOQ for aluminum, calcium, chromium, magnesium, potassium, sodium did not require qualification for associated field results.
Were target analytes in the field blank less than MDL?		•		See method 6020 narrative for equipment blank detections.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -004 recoveries were biased low for antimony, arsenic, nickel, zinc, copper and biased high for lead, chromium, potassium and vanadium. Sample -004 and -002 results were qualified for these analytes with J/M flags/reason codes. MS recoveries for aluminum, calcium, iron, manganese and magnesium were not used to qualify data based on the 4X rule criteria. NOTE: qualifier tables did not include iron 4X status.
Was the MS/MSD RPD within project acceptance limits?		•		Sample -004 aluminum, potassium MS/MSD RPD was outside project criteria so samples -002 and -004 results for this analyte were qualified with D reason codes.
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?		•		Parent/field duplicate pairs -002/-004 results for calcium were qualified D3 due to field duplicate RPD outliers and pairs -001/-003 results for aluminum, barium, calcium, chromium, cobalt, potassium, vanadium, zinc were qualified D3. NOTE: database sample pairing issues corrected and qualifiers updated as required.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•

Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC NI02IMW2 and NI11IMW1 had detections above the LOQ for barium and below the LOQ for aluminum, antimony, beryllium, cadmium, cobalt, chromium, copper, iron, lead, magnesium, manganese and socium. Sample -005 was qualified U/L for copper, iron, manganese, aluminum, antimony, chromium, magnesium, sodium. NOTE: QC batch PBNWI02IMW1 which was associated with sample -005 re-analysis data was not included in the pdf lab report and did not effect qualification of field sample results.
Were target analytes in the field blank less than MDL?		•		Sample -005 was equipment blank and included detections below the LOQ including flagged metals noted in method blank narration above.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?		•		QC NI021MW2 recovery was biased high for thallium. Qualification was not required based on this high bias result.
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			H1 qualifiers removed for soil samples since they were analyzed within project criteria hold time for soils.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC WG284597 had a detection below LOQ. Sample -005 result for this parameter was qualified non-detect at LOQ with U/L flag/reason code.
Were target analytes in the field blank less than MDL?		•		See above for detection qualified as non-detect due to method blank.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only.
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -004 low level spike was biased low so client samples -002 and -004 were qualified as estimated with UJ/M flags/reason codes. NOTE: high level MS recovery was acceptable for sample -004.
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?	•

Review Questions

Method: SW8260 (Volatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			Removed H flags since all soil samples were analyzed on the 14th day (project criteria limit).
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Samples -001 and -002 surrogates were biased low for 1 of 4 surrogate recoveries. These results were qualified as estimated with UJ/I flags/reason codes. NOTE: sample -001RA and -002RA re-analyses also had surrogate outliers so were not considered for final results.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC WG286120-2 had a detection below the LOQ for methylene chloride. Field samples -001, -002, -003, -004 methylene chloride results were qualified as non-detect at the LOQ and qualified U/L flags/reason codes.
Were target analytes in the field blank less than MDL?		•		Trip blank had a detection below the LOQ for methylene chloride and equipment blank had detections below the LOQ for methylene chloride and toluene. Qualifications were not made based on these field blank detections.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -004 MS recoveries were outliers biased low for chlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichlorobenzene, 1,2,4-trichlorobenzene, 1,2,3-trichlorobenzene and biased high for trichlorofluoromethane. Analytes associated with low bias recoveries were qualified with M reason codes and considered estimated for samples -004 and -002.
Was the MS/MSD RPD within project acceptance limits?		•		Sample -004 MS/MSD RPD were outliers for 2-hexanone, 1,2-dibromo-3-chloropropane, methyl acetate and methylcyclohexane. Analytes associated with these RPD outliers were qualified with D reason codes and considered estimated if detected for samples -004 and -002.
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•		

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Sample -005 acid fraction surrogates were biased low for 1 of 3 surrogates (not identified in lab report). Sample -005 acid fraction results were qualified estimated with UJ/I flags and flags assigned to base-neutral fraction analytes were removed.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC WG285454-1 and WG285465-1 had detections ABOVE the LOQ for bis-2-ethylhexylphthalate. All client sample results for this target analyte were qualified as non-detect at a modified RL (RL raised to level of detected analyte in each sample) with U/L flags/reason codes.
Were target analytes in the field blank less than MDL?		•		See above for equipment blank detection that was qualified based on method blank detection.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only.
Were LCS/LCSD recoveries within project acceptance limits?		•		QC WG285454-2 recovery was biased high for benzaldehyde and WG285465-2 recoveries were biased high for benzaldehyde, bis-2-ethylhexylphthalate and 3,3-dichlorobenzidine and biased low for caprolactam. Client samples -001, -002, -003, -004 caprolactam results were qualified estimated with UJ/C flags/reason codes.
Was the LCS/LCSD RPD within project acceptance limits?		•		LCS/LCSD RPD's were outliers for caprolactam, pentachlorophenol, n-nitrosodiphenylamine, atrazine. D reason codes were assigned to these results in samples -001, -002, -003, -004 but since associated field results were non-detect they were not flagged based on this QC outlier alone.
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		MS/MSD recoveries in client sample -004 were outliers biased high for benzaldehyde. Qualification was not required based on this high bias recovery outlier.
Was the MS/MSD RPD within project acceptance limits?	•			
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•		

Review Questions

Method: SW9045 (Soil pH)

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?			•	
Were target analytes in the method blank less than MDL?			•	
Were target analytes in the field blank less than MDL?			•	
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN7357. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 146 results (16.04%) out of the 910 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

REVISION SUMMARY - Narrative Comments

GENERAL COMMENTS: Hydrazine field sample results and QC are included in this SDG but electronic data is in separate SDG (13059-1). Please reference validation report 13059-1 for data qualification summary.

REVISION SUMMARY: Database field duplicate linked samples issues for association -002/-003 have been corrected in database. Flagging corrections were not required so only FDUP summary tables have been updated in this DVR.

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285632-2 (BS)/ WG285632-2	Indeno(1,2,3-c,d)pyrene	46.00	48 - 130	10 - 130	percent	J/UJ	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB10-SEP2020	EB	Indeno(1,2,3-c,d)pyrene	0.200	0.0990 UL	0.0990 UJ		ug/l	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method BNASIM, Prep Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of extraction found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW8-A-SEP2020 (N)/ SN7357-1		40.50	< 40	< 80	days	J/UJ	H2	Prep to Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method LYDKHN, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW8-A-SEP2020 (MS)/ WG285821-6	Total Organic Carbon	25.68	75 - 125	30 - 150	percent	J/X	M	Spike amount Insignificant

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method LYDKHN, Prep Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of extraction found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP5-SEP2020 (FD)/ SN7357-3		6.940	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-MW4OB-A-SEP2020 (N)/ SN7357-4		6.750	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-MW4OB-B-SEP2020 (N)/ SN7357-5		6.730	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-MW8-A-SEP2020 (N)/ SN7357-1		6.970	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-MW8-A-SEP2020 (N)/ WG285821-6		6.970	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-MW8-B-SEP2020 (N)/ SN7357-2		6.940	< 0	< 0	days	J/X	H2	Prep Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6010, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBSNI03ICS1 (LB)/ PBSNI03ICS1	Chromium	0.04200	< 0.026	< 1	mg/kg	U/None	L	
PBSNI03ICS1 (LB)/ PBSNI03ICS1	Barium	0.06600	< 0.025	< 0.5	mg/kg	U/None	L	
PBSNI03ICS1 (LB)/ PBSNI03ICS1	Nickel	0.09300	< 0.044	< 1	mg/kg	U/None	L	
PBSNI03ICS1 (LB)/ PBSNI03ICS1	Manganese	0.2200	< 0.16	< 0.5	mg/kg	U/None	L	
PBSNI03ICS1 (LB)/ PBSNI03ICS1	Zinc	0.2800	< 0.17	< 2	mg/kg	U/None	L	
PBSNI03ICS1 (LB)/ PBSNI03ICS1	Potassium	14.00	< 2.9	< 100	mg/kg	U/None	L	
PBSNI03ICS1 (LB)/ PBSNI03ICS1	Magnesium	2.100	< 0.68	< 10	mg/kg	U/None	L	
PBSNI03ICS1 (LB)/ PBSNI03ICS1	Iron	2.200	< 1.4	< 10	mg/kg	U/None	L	
PBSNI03ICS1 (LB)/ PBSNI03ICS1	Calcium	6.800	< 1.8	< 10	mg/kg	U/None	L	
PBSNI03ICS1 (LB)/ PBSNI03ICS1	Sodium	7.100	< 1.5	< 100	mg/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6020, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB10-SEP2020 (EB)/ SN7357-6	Cadmium	0.1100	< 0.059	< 2	ug/l	U/None	V	
NHFLA-EB10-SEP2020 (EB)/ SN7357-6	Cobalt	0.1700	< 0.12	< 2	ug/l	U/None	V	
NHFLA-EB10-SEP2020 (EB)/ SN7357-6	Antimony	0.4200	< 0.22	< 4	ug/l	U/None	V	
NHFLA-EB10-SEP2020 (EB)/ SN7357-6	Manganese	1.500	< 0.7	< 4	ug/l	U/None	V	
NHFLA-EB10-SEP2020 (EB)/ SN7357-6	Copper	1.600	< 0.37	< 6	ug/l	U/None	V	
NHFLA-EB10-SEP2020 (EB)/ SN7357-6	Aluminum	17.00	< 8.8	< 200	ug/l	U/None	V	
NHFLA-EB10-SEP2020 (EB)/ SN7357-6	Barium	2.800	< 1.1	< 8	ug/l	U/None	V

NHFLA-EB10-SEP2020 (EB)/ SN7357-6	Sodium	240.0	< 37	< 2000	ug/l	U/None	V	
NHFLA-EB10-SEP2020 (EB)/ SN7357-6	Calcium	68.00	< 41	< 200	ug/l	U/None	V	
NHFLA-EB10-SEP2020 (EB)/ SN7357-6	Iron	90.00	< 26	< 200	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6020, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBWNI09IMW3 (LB)/ PBWNI09IMW3	Lead	0.2200	< 0.074	< 1	ug/l	U/None	L	
PBWNI09IMW3 (LB)/ PBWNI09IMW3	Copper	0.6600	< 0.18	< 3	ug/l	U/None	L	
PBWNI09IMW3 (LB)/ PBWNI09IMW3	Magnesium	14.00	< 7.8	< 100	ug/l	U/None	L	
PBWNI09IMW3 (LB)/ PBWNI09IMW3	Aluminum	8.500	< 4.4	< 100	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW6020

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB10-SEP2020	EB	Aluminum	200	17.0 J	80.0 U		ug/l	L
NHFLA-EB10-SEP2020	EB	Copper	6.00	1.60 J	4.00 U		ug/l	L
NHFLA-EB10-SEP2020	EB	Magnesium	200	24.0 J	160 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB10-SEP2020 (EB)/ SN7357-6	Chromium, Hexavalent	0.001400	< 0.00076	< 0.025	mg/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7196, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285553-1 (LB)/ WG285553-1	Chromium, Hexavalent	0.0009200	< 0.00076	< 0.025	mg/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB10-SEP2020	EB	Chromium, Hexavalent	0.0250	0.00140 J	0.0125 U		mg/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP5-SEP2020 (FD)/ SN7357-3		8.040	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-MW4OB-A-SEP2020 (N)/ SN7357-4		7.860	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-MW4OB-B-SEP2020 (N)/ SN7357-5		7.840	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-MW8-A-SEP2020 (N)/ SN7357-1		8.080	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-MW8-B-SEP2020 (N)/ SN7357-2		8.040	< 1	< 2	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7470, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB10-SEP2020 (EB)/ SN7357-6	Mercury	0.05800	< 0.013	< 0.2	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7470, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBWNI09HGW2 (LB)/ PBWNI09HGW2	Mercury	0.08000	< 0.013	< 0.2	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7470

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB10-SEP2020	EB	Mercury	0.200	0.0580 J	0.100 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW4OB-A-SEP2020 (N)/ SN7357-4	Dibromofluoromethane	139.0	78 - 119	10 - 119	percent	J/None	I	
NHFLA-MW4OB-A-SEP2020 (N)/ SN7357-4	1,2-Dichloroethane-d4	172.0	71 - 136	10 - 136	percent	J/None	I	
NHFLA-MW4OB-A-SEP2020 (N)/ SN7357-4	1-Bromo-4-fluorobenzene (4-Bromofluorobenzene)	74.40	79 - 119	10 - 119	percent	J/UJ	I	
NHFLA-MW4OB-B-SEP2020 (N)/ SN7357-5	Dibromofluoromethane	123.0	78 - 119	10 - 119	percent	J/None	I	
NHFLA-MW8-A-SEP2020 (N)/ SN7357-1	Dibromofluoromethane	124.0	78 - 119	10 - 119	percent	J/None	I	
NHFLA-MW8-B-SEP2020 (N)/ SN7357-2	1-Bromo-4-fluorobenzene (4-Bromofluorobenzene)	76.60	79 - 119	10 - 119	percent	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Surrogate for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW4OB-A-SEP2020	N	1,1,1-Trichloroethane	5.30	2.60 U	2.60 UJ		ug/kg	I

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW8-A-SEP2020 (N)/ SN7357-1		14.14	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB10-SEP2020 (EB)/ SN7357-6	Bis(2-ethylhexyl)phthalate	16.00	< 1.7	< 9.9	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285631-1 (LB)/ WG285631-1	Bis(2-ethylhexyl)phthalate	4.800	< 1.7	< 10	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB10-SEP2020	EB	Bis(2-ethylhexyl)phthalate	16.0	16.0	16.0 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285545-1 (LB)/ WG285545-1	Bis(2-ethylhexyl)phthalate	510.0	< 98	< 330	ug/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP5-SEP2020	FD	Bis(2-ethylhexyl)phthalate	2000	2000 B	2000 U		ug/kg	L
NHFLA-MW4OB-A-SEP2020	N	Bis(2-ethylhexyl)phthalate	1200	1200 B	1200 U		ug/kg	L
NHFLA-MW4OB-B-SEP2020	N	Bis(2-ethylhexyl)phthalate	660	660 B	660 U		ug/kg	L
NHFLA-MW8-B-SEP2020	N	Bis(2-ethylhexyl)phthalate	1400	1400 B	1400 U		ug/kg	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285631-2 (BS)/ WG285631-2	Benzaldehyde	316.0	10 - 189	10 - 189	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285545-2 (BS)/ WG285545-2	Caprolactam	36.17	46 - 117	10 - 117	percent	J/UJ	C	
WG285545-3 (BD)/ WG285545-3	3,3'-Dichlorobenzidine	135.9	22 - 121	10 - 121	percent	J/None	C	
WG285545-3 (BD)/ WG285545-3	Benzaldehyde	216.8	10 - 134	10 - 134	percent	J/None	C	
WG285545-3 (BD)/ WG285545-3	Caprolactam	36.35	46 - 117	10 - 117	percent	J/UJ	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP5-SEP2020	FD	Caprolactam	380	290 ULL	290 UJ		ug/kg	C
NHFLA-MW4OB-A-SEP2020	N	Caprolactam	380	280 ULL	280 UJ		ug/kg	C
NHFLA-MW4OB-B-SEP2020	N	Caprolactam	400	300 ULL	300 UJ		ug/kg	C
NHFLA-MW8-A-SEP2020	N	Caprolactam	320	240 ULL	240 UJ		ug/kg	C
NHFLA-MW8-B-SEP2020	N	Caprolactam	370	280 ULL	280 UJ		ug/kg	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, LCS RPD

The objective of laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. LCS/LCSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Laboratory control sample/laboratory control sample duplicate RPD results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285545-3 (BD)/ WG285545-3	Benzaldehyde	58.11	< 20	< 20	rpd	J/UJ	Z	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS RPD for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP5-SEP2020	FD	Benzaldehyde	380	290 UL	290 UJ		ug/kg	Z
NHFLA-MW4OB-A-SEP2020	N	Benzaldehyde	380	280 UL	280 UJ		ug/kg	Z
NHFLA-MW4OB-B-SEP2020	N	Benzaldehyde	400	300 UL	300 UJ		ug/kg	Z
NHFLA-MW8-A-SEP2020	N	Benzaldehyde	320	240 UL	240 UJ		ug/kg	Z
NHFLA-MW8-B-SEP2020	N	Benzaldehyde	370	280 UL	280 UJ		ug/kg	Z

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Prep Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of extraction found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP5-SEP2020 (FD)/ SN7357-3		40.73	< 40	< 80	days	J/UJ	H2	Prep to Test Exceeds UWL
NHFLA-MW4OB-A-SEP2020 (N)/ SN7357-4		40.75	< 40	< 80	days	J/UJ	H2	Prep to Test Exceeds UWL
NHFLA-MW4OB-B-SEP2020 (N)/ SN7357-5		40.77	< 40	< 80	days	J/UJ	H2	Prep to Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Prep Hold Time for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP5-SEP2020	FD	1,4-Dioxane (p-Dioxane)	380	290 U	290 UJ		ug/kg	H2
NHFLA-MW4OB-A-SEP2020	N	1,4-Dioxane (p-Dioxane)	380	280 U	280 UJ		ug/kg	H2
NHFLA-MW4OB-B-SEP2020	N	1,4-Dioxane (p-Dioxane)	400	300 U	300 UJ		ug/kg	H2

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB10-SEP2020 (EB)/ SN7357-6	2,4,6-Tribromophenol	38.20	43 - 140	10 - 140	percent	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Surrogate for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB10-SEP2020	EB	1,2,4,5-Tetrachlorobenzene	9.90	7.40 U	7.40 U		ug/l	I
NHFLA-EB10-SEP2020	EB	2,4,5-Trichlorophenol	25.0	19.0 U	19.0 UJ		ug/l	I
NHFLA-EB10-SEP2020	EB	2,4,6-Trichlorophenol	9.90	7.40 U	7.40 UJ		ug/l	I
NHFLA-EB10-SEP2020	EB	2,4-Dichlorophenol	9.90	7.40 U	7.40 UJ		ug/l	I

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D3	Field Duplicate RPD
H1	Test Hold Time
H2	Prep Hold Time
I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
TR	Trace Level Detect
V	Equipment Blank
Z	LCS RPD

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			Removed H qualifiers for sample -001. Sample analyzed in 40 days same as project required maximum holding time.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG285632-2 LCS recoveries biased low for indeno(123cd)pyrene. Client sample -006 qualified with UJ flag and C reason code for this analyte.
Was the LCS/LCSD RPD within project acceptance limits?			•	LCS only
Was a MS/MSD pair prepared with each batch?		•		
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			Field duplicate associated issues corrected in database so no qualifications required.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		Internal standard and calibration outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data rejected during the verification process?		•		

Review Questions

Method: LYDKHN (Lloyd Kahn Method for the Determination of Total Organic Carbon in Sediment, USEPA Region II Method)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			Hold time flags were removed - sample analyzed in 7 days versus 14 days project requirement.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?			•	Sample -001 MS/MSD spike amounts were considered insignificant due to 4X rule so were not used to qualify data.
Was the MS/MSD RPD within project acceptance limits?	•			
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?		•		Samples -002 and -003 qualified as estimated with J flags and D3 qualifier codes due to field dup RPD on 63.8 vs upper warning criteria of 50.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•		

Review Questions

Method: SW6010 (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch PBSNI03ICS1 method blank detections below LOQ for barium, calcium, chromium, iron, magnesium, manganese, nickel, potassium, sodium, zinc. No qualifications required. Removed U/L flag/code for sample - 004 since result of 156J was greater than 5X blank detect of 7.1J.
Were target analytes in the field blank less than MDL?			•	Equipment blank detections were not used to qualify soil field sample detections
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			Field duplicate association issues corrected in database so no qualifications required.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary

Review Questions

Method: SW8260 (Volatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			Removed H qualifiers for sample -001 since analyzed on 14th day of 14 day hold time requirement.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Samples -002 and -004 qualified with UJ/J I flags and reason codes since both had at least one surrogate outlier biased low. Samples -001RA and -005 had 1 of 4 surrogate outliers biased high so detects were qualified J/I flag/reason codes and non-detects did not require qualification
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			Field duplicate association issues corrected in database so no flags required.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		Internal standard outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data rejected during the verification process?		•		

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?		•		Sample -003, -004, -005 H2 flags were required for 1,4-dioxane results only.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Sample -006RA 1 of 3 acid surrogates were outliers biased low so acid only results were qualified (BN flags removed in database).
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG285545-1 detection for bis-2-ethylhexylphthalate resulted in qualification of U/L flag/reason codes for samples -002, -003, -004, -005. QC batch WG285631 detection for bis-2-ethylhexylphthalate resulted in qualification of U/L flag/reason codes for sample -006.
Were target analytes in the field blank less than MDL?		•		bis-2-ethylhexylphthalate detection was qualified as noted above.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG285545-2 recovery biased high for benzaldehyde and 3,3-dichlorobenzidine for just one LCS and biased low for both LCS/LCSD for caprolactam. Client samples -001, -002, -003, -004, -005 benzaldehyde results qualified UJ/E due to RPD outlier for benzaldehyde and caprolactam qualified UJ/C due to low bias recoveries.
Was the LCS/LCSD RPD within project acceptance limits?		•		QC batch WG285545-2 benzaldehyde outlier as noted above and also 2,2-oxybis(1-chloropropane) RPD outleir which did not require qualification.
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		Internal standard, ICV, CCV and ICAL outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data rejected during the verification process?		•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN7404. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 95 results (19.79%) out of the 480 results (sample and field QC samples) reported are qualified based on review and 14 results (2.92%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
BNASIM	No additional comments; see Checklist for detail.
LYDKHN	No additional comments; see Checklist for detail.
SW6010	No additional comments; see Checklist for detail.

Jim Tomalia

February 11, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285634-1 (LB)/ WG285634-1	Benzo (g,h,i)perylene	4.000	< 2	< 20	ug/kg	U/None	L	
WG285634-1 (LB)/ WG285634-1	Dibenz (a,h)anthracene	4.100	< 1.8	< 20	ug/kg	U/None	L	
WG285634-1 (LB)/ WG285634-1	Indeno(1,2,3-c,d)pyrene	4.200	< 1.9	< 20	ug/kg	U/None	L	
WG285634-1 (LB)/ WG285634-1	Benzo (k)fluoranthene	4.500	< 3.1	< 20	ug/kg	U/None	L	
WG285634-1 (LB)/ WG285634-1	Benzo(a)pyrene	4.500	< 3.3	< 20	ug/kg	U/None	L	
WG285634-1 (LB)/ WG285634-1	Benzo (b)fluoranthene	7.200	< 2.4	< 20	ug/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285632-2 (BS)/ WG285632-2	Indeno(1,2,3-c,d)pyrene	46.00	48 - 130	10 - 130	percent	J/UJ	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB11-SEP2020	EB	Indeno(1,2,3-c,d)pyrene	0.190	0.0950 UL	0.0950 UJ		ug/l	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method LYDKHN, Prep Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of extraction found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW14-A-SEP2020 (N)/ SN7404-1		5.920	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-MW14-B-SEP2020 (N)/ SN7404-2		5.900	< 0	< 0	days	J/X	H2	Prep Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6010, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBSNI04ICS1 (LB)/ PBSNI04ICS1	Chromium	0.05300	< 0.026	< 1	mg/kg	U/None	L	
PBSNI04ICS1 (LB)/ PBSNI04ICS1	Aluminum	1.300	< 0.71	< 30	mg/kg	U/None	L	
PBSNI04ICS1 (LB)/ PBSNI04ICS1	Magnesium	1.500	< 0.68	< 10	mg/kg	U/None	L	
PBSNI04ICS1 (LB)/ PBSNI04ICS1	Potassium	17.00	< 2.9	< 100	mg/kg	U/None	L	
PBSNI04ICS1 (LB)/ PBSNI04ICS1	Sodium	2.800	< 1.5	< 100	mg/kg	U/None	L	
PBSNI04ICS1 (LB)/ PBSNI04ICS1	Calcium	3.500	< 1.8	< 10	mg/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6020, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	Manganese	0.9300	< 0.7	< 4	ug/l	U/None	V	
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	Copper	1.100	< 0.37	< 6	ug/l	U/None	V	
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	Sodium	1280	< 37	< 2000	ug/l	U/None	V	
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	Calcium	150.0	< 41	< 200	ug/l	U/None	V	
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	Aluminum	17.00	< 8.8	< 200	ug/l	U/None	V	
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	Potassium	200.0	< 61	< 2000	ug/l	U/None	V

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW6020

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB11-SEP2020	EB	Aluminum	200	17.0 J	80.0 U		ug/l	L
NHFLA-EB11-SEP2020	EB	Barium	4.00	1.70 JB	2.00 U		ug/l	L
NHFLA-EB11-SEP2020	EB	Calcium	200	150 J	160 U		ug/l	L
NHFLA-EB11-SEP2020	EB	Copper	6.00	1.10 J	4.00 U		ug/l	L
NHFLA-EB11-SEP2020	EB	Lead	2.00	0.380 J	1.00 U		ug/l	L
NHFLA-EB11-SEP2020	EB	Magnesium	200	74.0 J	160 U		ug/l	L
NHFLA-EB11-SEP2020	EB	Manganese	4.00	0.930 JB	2.00 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285589-1 (LB)/ WG285589-1	Chromium, Hexavalent	0.01200	< 0.00076	< 0.025	mg/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7196, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW14-A-SEP2020 (N)/ SN7404-1		7.020	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-MW14-B-SEP2020 (N)/ SN7404-2		7.000	< 1	< 2	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7470, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	Mercury	0.04400	< 0.013	< 0.2	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7470, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBWNI09HGW2 (LB)/ PBWNI09HGW2	Mercury	0.08000	< 0.013	< 0.2	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7470

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB11-SEP2020	EB	Mercury	0.200	0.0440 J	0.100 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	1,2-Dichloroethane	0.2100	< 0.2	< 1	ug/l	U/None	V	
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	Toluene	0.3300	< 0.27	< 1	ug/l	U/None	V	
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	Methylene chloride	1.400	< 1.1	< 5	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW14-A-SEP2020 (N)/ SN7404-1	Dibromofluoromethane	129.0	78 - 119	10 - 119	percent	J/None	I	
NHFLA-MW14-A-SEP2020 (N)/ SN7404-1	1,2-Dichloroethane-d4	142.0	71 - 136	10 - 136	percent	J/None	I	
NHFLA-MW14-A-SEP2020 (N)/ SN7404-1	1-Bromo-4-fluorobenzene (4-Bromofluorobenzene)	65.60	79 - 119	10 - 119	percent	J/UJ	I	
NHFLA-MW14-B-SEP2020 (N)/ SN7404-2	Dibromofluoromethane	120.0	78 - 119	10 - 119	percent	J/None	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Surrogate for SW8260

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Trip Blank

The purpose of trip blanks is to determine the existence and magnitude of cross-contamination problems resulting from the shipping of samples. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in trip blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-TB13-SEP2020 (TB)/ SN7404-4	Methylene chloride	1.600	< 1.1	< 5	ug/l	U/None	T	
NHFLA-TB13-SEP2020 (TB)/ SN7404-4	Acetone	3.800	< 2.2	< 5	ug/l	U/None	T	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	Bis(2-ethylhexyl) phthalate	17.00	< 1.6	< 9.5	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285631-1 (LB)/ WG285631-1	Bis(2-ethylhexyl) phthalate	4.800	< 1.7	< 10	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB11-SEP2020	EB	Bis(2-ethylhexyl) phthalate	17.0	17.0 B	17.0 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285635-1RA (LB)/ WG285635-1RA	Bis(2-ethylhexyl) phthalate	4100	< 98	< 330	ug/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW14-A-SEP2020	N	Bis(2-ethylhexyl) phthalate	3600	3600 BL	3600 U		ug/kg	L
NHFLA-MW14-B-SEP2020	N	Bis(2-ethylhexyl) phthalate	6200	6200 BL	6200 U		ug/kg	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285631-2 (BS)/ WG285631-2	Benzaldehyde	316.0	10 - 189	10 - 189	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285635-2RA (BS)/ WG285635-2RA	Benzaldehyde	321.0	10 - 134	10 - 134	percent	J/None	C	
WG285635-2RA (BS)/ WG285635-2RA	Bis(2-ethylhexyl) phthalate	350.9	51 - 133	10 - 133	percent	J/None	C	
WG285635-2RA (BS)/ WG285635-2RA	Caprolactam	36.83	46 - 117	10 - 117	percent	J/UJ	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW14-A-SEP2020	N	Caprolactam	360	270 UL	270 UJ		ug/kg	C
NHFLA-MW14-B-SEP2020	N	Caprolactam	380	290 UL	290 UJ		ug/kg	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	2-Fluorophenol	11.40	19 - 119	10 - 119	percent	J/UJ	I	
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	2,4,6-Tribromophenol	28.80	43 - 140	10 - 140	percent	J/UJ	I	
NHFLA-EB11-SEP2020 (EB)/ SN7404-3	Phenol-d6	8.360	10 - 90	10 - 90	percent	J/X	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Surrogate for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB11-SEP2020	EB	2,4,5-Trichlorophenol	24.0	18.0 U	18.0 X		ug/l	I
NHFLA-EB11-SEP2020	EB	2,4,6-Trichlorophenol	9.50	7.10 U	7.10 X		ug/l	I
NHFLA-EB11-SEP2020	EB	2,4-Dichlorophenol	9.50	7.10 U	7.10 X		ug/l	I

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Automated Data Review Detail Report for SN7404
C02NY0079-02, Nike BU 51/52, Launch Area
Nike BU 51/52 Quality Assurance Project Plan

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
BNASIM/SW3550/NONE	1	10
SW6010/SW3050/NONE	2	12
SW6020/SW3010/NONE	1	8
SW7196/SW3060/NONE	2	2
SW7471/METHOD/NONE	2	2
SW8270/SW3510/NONE	1	1
SW8270/SW3550/NONE	2	60

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
H1	Test Hold Time
H2	Prep Hold Time
I	Surrogate recovery outside project limits.
L	Lab Blank
T	Trip Blank
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: BNASIM

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?	•			Sample -001DL surrogates diluted to below statistically reliable levels so were not used to qualify results.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		WG285634-1 Method blank detections below LOQ for benzo(b)fluoranthene, benzo(k)flouranthene, benzo(a)pyrene, indeno(123cd)pyrene, dibenzo (ah)anthracene, benzo(ghi)perylene. Qualifications of field results not required based on these method blank detections.
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			QC batch WG285632 low bias for INDENO(123cd)PYRENE. Equipment blank result for this analyte qualified estimated with UJ/C flag/reason codes.
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		Internal standard and calibration outliers (8260, 8270-SIM, 8270D) as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		NI04IMW2 detections below the LOQ for aluminum, barium, calcium, chromium, copper, lead, magnesium, manganese, nickel, thallium. Client sample -003 results qualified as non-detect at LOD with U/L flags/reason codes for aluminum, barium, calcium, copper, lead, magnesium, manganese.
Were target analytes in the field blank less than MDL?		•		Detections qualified as noted above in addition to detections for potassium and sodium.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary

Review Questions

Method: SW8270

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Sample -03RA surrogates biased low for 3 of 3 acid fraction surrogates with 1 of 3 acid fraction surrogates below reject criteria. Sample -003 acid fraction field results qualified rejected with X/I flags/reason codes (base-neutral flags and qualifiers removed from database for this sample). Sample-02RA surrogates were biased low for 2 of 3 acid fraction surrogates - acid fraction target analytes were qualified with UJ/I flags/reason codes and base-neutral fraction flags were removed.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		WG285635-04RA, -01RA2 and WG285631-1 detections below LOQ for bis-2-ethylhexylphthalate. Field samples -001, -002, -003 bis-2-ethylhexylphthalate results qualified as non-detect at LOQ with U/L flags/reason codes.
Were target analytes in the field blank less than MDL?		•		Bis-2-ethylhexylphthalate detection in equipment blank was qualified non-detect as noted above due to method blank detection.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?		•		WG285631-2 high bias for benzaldehyde and WG285635-2RA high bias for bis-2-ethylhexylphthalate and low bias for caprolactam. Client samples -001 and -002 caprolactam results qualified as estimated with UJ/C flags/reason codes.
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?				Internal standard and calibration outliers (8260, 8270-SIM, 8270D) as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?	•			Sample -003 acid fraction analytes qualified rejected due to low bias surrogate recoveries.

NHFLA-TB14-SEP2020	SN7436-4	Water	Trip Blank/TB									X		

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN7436. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 103 results (16.35%) out of the 630 results (sample and field QC samples) reported are qualified based on review and 26 results (4.13%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
BNASIM	No additional comments; see Checklist for detail.
LYDKHN	No additional comments; see Checklist for detail.
SW6010	No additional comments; see Checklist for detail.
SW6020	No additional comments; see Checklist for detail.
SW7196	No additional comments; see Checklist for detail.
SW7470	No additional comments; see Checklist for detail.
SW7471	No additional comments; see Checklist for detail.
SW8082	No additional comments; see Checklist for detail.
SW8260	No additional comments; see Checklist for detail.
SW8270	No additional comments; see Checklist for detail.
SW9045	No additional comments; see Checklist for detail.

Jim Tomalia

February 11, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB12-SEP2020 (EB)/ SN7436-5	Benzo (k)fluoranthene	0.05500	< 0.047	< 0.19	ug/l	U/None	V	
NHFLA-EB12-SEP2020 (EB)/ SN7436-5	Benzo(a)pyrene	0.08200	< 0.063	< 0.19	ug/l	U/None	V	
NHFLA-EB12-SEP2020 (EB)/ SN7436-5	Benzo (g,h,i)perylene	0.1400	< 0.062	< 0.19	ug/l	U/None	V	
NHFLA-EB12-SEP2020 (EB)/ SN7436-5	Indeno(1,2,3-c,d)pyrene	0.2100	< 0.05	< 0.19	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285744-1 (LB)/ WG285744-1	Benzo (k)fluoranthene	0.08000	< 0.049	< 0.2	ug/l	U/None	L	
WG285744-1 (LB)/ WG285744-1	Benzo(a)pyrene	0.08500	< 0.066	< 0.2	ug/l	U/None	L	
WG285744-1 (LB)/ WG285744-1	Benzo (g,h,i)perylene	0.1600	< 0.065	< 0.2	ug/l	U/None	L	
WG285744-1 (LB)/ WG285744-1	Indeno(1,2,3-c,d)pyrene	0.2300	< 0.052	< 0.2	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB12-SEP2020	EB	Benzo(a)pyrene	0.190	0.0820 J	0.0950 U		ug/l	L
NHFLA-EB12-SEP2020	EB	Benzo(g,h,i)perylene	0.190	0.140 JB	0.190 U		ug/l	L
NHFLA-EB12-SEP2020	EB	Benzo(k)fluoranthene	0.190	0.0550 J	0.0950 U		ug/l	L
NHFLA-EB12-SEP2020	EB	Indeno(1,2,3-c,d)pyrene	0.190	0.210 B	0.210 J	+	ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method BNASIM, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285751-1 (LB)/ WG285751-1	Dibenz (a,h)anthracene	1.800	< 1.8	< 20	ug/kg	U/None	L	
WG285751-1 (LB)/ WG285751-1	Benzo (a)anthracene	1.900	< 1.9	< 20	ug/kg	U/None	L	
WG285751-1 (LB)/ WG285751-1	Benzo(a)pyrene	4.200	< 3.3	< 20	ug/kg	U/None	L	
WG285751-1 (LB)/ WG285751-1	Benzo (k)fluoranthene	5.700	< 3.1	< 20	ug/kg	U/None	L	
WG285751-1 (LB)/ WG285751-1	Benzo (g,h,i)perylene	6.500	< 2	< 20	ug/kg	U/None	L	
WG285751-1 (LB)/ WG285751-1	Indeno(1,2,3-c,d)pyrene	8.700	< 1.9	< 20	ug/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW11-B-SEP2020	N	Benzo(g,h,i)perylene	33.0	33.0	33.0 U		ug/kg	L

NHFLA-MW12-B-SEP2020	N	Dibenz(a,h)anthracene	22.0	4.50 J	11.0 U		ug/kg	L
NHFLA-MW12-B-SEP2020	N	Indeno(1,2,3-c,d)pyrene	24.0	24.0	24.0 U		ug/kg	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method BNASIM, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285751-2 (BS)/ WG285751-2	Benzo (k)fluoranthene	124.6	56 - 123	10 - 123	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW11-B-SEP2020	N	Benzo(k)fluoranthene	26.0	26.0 L	26.0 U		ug/kg	L/C
NHFLA-MW11-C-SEP2020	N	Benzo(k)fluoranthene	24.0	11.0 JL	12.0 U		ug/kg	L/C
NHFLA-MW12-B-SEP2020	N	Benzo(k)fluoranthene	22.0	7.40 JL	11.0 U		ug/kg	L/C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method LYDKHN, Prep Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of extraction found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW11-B-SEP2020 (N)/ SN7436-1		5.370	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-MW11-C-SEP2020 (N)/ SN7436-2		5.350	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-MW12-B-SEP2020 (N)/ SN7436-3		5.190	< 0	< 0	days	J/X	H2	Prep Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6010, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBSNI08ICS1 (LB)/ PBSNI08ICS1	Beryllium	0.01400	< 0.0068	< 0.5	mg/kg	U/None	L	
PBSNI08ICS1 (LB)/ PBSNI08ICS1	Nickel	0.06200	< 0.044	< 1	mg/kg	U/None	L	
PBSNI08ICS1 (LB)/ PBSNI08ICS1	Vanadium	0.07200	< 0.037	< 1	mg/kg	U/None	L	
PBSNI08ICS1 (LB)/ PBSNI08ICS1	Chromium	0.09500	< 0.026	< 1	mg/kg	U/None	L	
PBSNI08ICS1 (LB)/ PBSNI08ICS1	Arsenic	0.1200	< 0.068	< 0.8	mg/kg	U/None	L	
PBSNI08ICS1 (LB)/ PBSNI08ICS1	Antimony	0.1300	< 0.07	< 0.8	mg/kg	U/None	L	
PBSNI08ICS1 (LB)/ PBSNI08ICS1	Zinc	0.2400	< 0.17	< 2	mg/kg	U/None	L	
PBSNI08ICS1 (LB)/ PBSNI08ICS1	Potassium	12.00	< 2.9	< 100	mg/kg	U/None	L	
PBSNI08ICS1 (LB)/ PBSNI08ICS1	Magnesium	2.100	< 0.68	< 10	mg/kg	U/None	L	
PBSNI08ICS1 (LB)/ PBSNI08ICS1	Calcium	4.200	< 1.8	< 10	mg/kg	U/None	L	
PBSNI08ICS1 (LB)/ PBSNI08ICS1	Sodium	8.400	< 1.5	< 100	mg/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW6010

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW11-B-SEP2020	N	Antimony	1.60	0.380 J	0.970 U		mg/kg	L

NHFLA-EB12-SEP2020	EB	Magnesium	200	20.0 J	160 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB12-SEP2020 (EB)/ SN7436-5	Chromium, Hexavalent	0.005500	< 0.00076	< 0.025	mg/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7196, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG285645-1 (LB)/ WG285645-1	Chromium, Hexavalent	0.001500	< 0.00076	< 0.025	mg/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB12-SEP2020	EB	Chromium, Hexavalent	0.0250	0.00550 J	0.0125 U		mg/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW11-B-SEP2020 (N)/ SN7436-1		6.070	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-MW11-C-SEP2020 (N)/ SN7436-2		6.030	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-MW12-B-SEP2020 (N)/ SN7436-3		5.860	< 1	< 2	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7470, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB12-SEP2020 (EB)/ SN7436-5	Mercury	0.04300	< 0.013	< 0.2	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7470, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBWNI09HGW2 (LB)/ PBWNI09HGW2	Mercury	0.08000	< 0.013	< 0.2	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7470

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB12-SEP2020	EB	Mercury	0.200	0.0430 J	0.100 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB12-SEP2020 (EB)/ SN7436-5	Phenol-d6	0.000	10 - 90	10 - 90	percent	J/X	I	
NHFLA-EB12-SEP2020 (EB)/ SN7436-5	2-Fluorophenol	0.000	19 - 119	10 - 119	percent	J/X	I	
NHFLA-EB12-SEP2020 (EB)/ SN7436-5	Terphenyl-d14	28.60	50 - 134	10 - 134	percent	J/UJ	I	
NHFLA-EB12-SEP2020 (EB)/ SN7436-5	Nitrobenzene-d5	43.50	44 - 120	10 - 120	percent	J/UJ	I	
NHFLA-EB12-SEP2020 (EB)/ SN7436-5	2,4,6-Tribromophenol	8.160	43 - 140	10 - 140	percent	J/X	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Table of All Qualified Results

Test Method: SW8270 Extraction Method: SW3550								
FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW12-B-SEP2020	N	N-Nitrosodiphenylamine	360	270 UL	270 X		ug/kg	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
C	LCS Recovery
H1	Test Hold Time
H2	Prep Hold Time
I	Surrogate recovery outside project limits.
L	Lab Blank
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: LYDKHN

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			Hold time flags were removed - sample analyzed in 5 days versus 28 days project requirement.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•

Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC NI08ICS1 had detections below the LOQ for antimony, arsenic, beryllium, calcium, chromium, magnesium, nickel, potassium, sodium, vanadium, zinc. Client samples-001, -002 and -003 antimony results were qualified as non-detect at LOD with U/L flags/reason codes.
Were target analytes in the field blank less than MDL?		•		See method 6020 narration for equipment blank detections and qualification.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•

Review Questions

Method: SW7196

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			H1 code removed for soil sample since they were analyzed less than 28 day project criteria.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		Batch WG285645 detection below LOQ resulted in qualification of client sample -005 with U flag and L reason code - non-detect at LOD.
Were target analytes in the field blank less than MDL?		•		See above for equipment blank detection qualification.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?			•	MS only
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?	•			
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			NOTE: sample -005RA re-extracted out of hold but data not used for final reporting.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Sample -005 (equipment blank) acid fraction surrogates biased low below lower rejection criteria for all 3 surrogates and biased low but above rejection criteria for 2 of 3 base-neutral fraction surrogates. Field sample -005 acid fraction results qualified rejected with X/L flags/reason codes and base-neutral fraction results qualified with J flags if detected and UJ flags if non-detect with L reason codes. NOTE: base-neutral fraction results flags were changed from X to UJ/J in database.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC WG285743-1 detect above LOQ for bis-2-ethylhexylphthalate. Sample -005 result for this analyte qualified as non-detect at revised LOQ (changed from 9.5 to detected amount of 120) with U/L flag/reason code. QC WG285752-1 detections above LOQ for bis-2-ethylhexylphthalate and phenol. Sample -001, -002 and -003 bis-2-ethylhexylphthalate results and sample -002 phenol results qualified as non-detect at revised LOQ's (elevated to detected levels) with U/L flags/reason codes
Were target analytes in the field blank less than MDL?		•		See above for equipment blank (-005) detections qualified due to method blank detections.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?		•		QC WG285743-2 recoveries biased low for 2,4,6-trichlorophenol and biased high for benzaldehyde and bis-2-ethylhexylphthalate. Sample -005 bis-2-ethylhexylphthalate already qualified as non-detect due to method blank detection but C reason code added to U/L/I flags.QC WG286781-2 had a high bias recovery for benzaldehyde and QC WG285752-2 had high bias for benzaldehyde, bis-2-ethylhexylphthalate, di-n-octylphthalate and low bias for 4-chloroaniline, caprolactam and carbazole and low bias below reject criteria for 4-nitroaniline, n-nitrosodinpropylamine, atrazine and 3,3-dichlorobenzidine. Sample -001, -002, -003 field results associated with analytes below reject criteria were qualified as rejected with X/C flag/reason codes. Sample -001, -002, -003 field results associated with analytes with low bias but above reject criteria were qualified UJ with C reason codes. Sample -002 benzaldehyde and samples -001,-002, -003 bis-2-ethylhexylphthalate results were qualified estimated with J/C flags/reason codes unless already qualified as non-detect due to method blank detections noted above.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN7601. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 31 results (8.40%) out of the 369 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

TRIP BLANK RESULTS NOT REPORTED - VOC only.

Analytical Method	Data Reviewer Comment
BNASIM	No additional comments; see Checklist for detail.
SW6010	No additional comments; see Checklist for detail.
SW6020	No additional comments; see Checklist for detail.
SW7196	No additional comments; see Checklist for detail.
SW7470	No additional comments; see Checklist for detail.
SW7471	No additional comments; see Checklist for detail.

Jim Tomalia

February 11, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB13-SEP2020 (EB)/ SN7601-9	Benzo(a)pyrene	0.06800	< 0.062	< 0.19	ug/l	U/None	V	
NHFLA-EB13-SEP2020 (EB)/ SN7601-9	Benzo (g,h,i)perylene	0.1200	< 0.061	< 0.19	ug/l	U/None	V	
NHFLA-EB13-SEP2020 (EB)/ SN7601-9	Indeno(1,2,3-c,d)pyrene	0.2000	< 0.049	< 0.19	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG286127-1 (LB)/ WG286127-1	Benzo(a)pyrene	0.06700	< 0.066	< 0.2	ug/l	U/None	L	
WG286127-1 (LB)/ WG286127-1	Benzo (g,h,i)perylene	0.1200	< 0.065	< 0.2	ug/l	U/None	L	
WG286127-1 (LB)/ WG286127-1	Indeno(1,2,3-c,d)pyrene	0.2100	< 0.052	< 0.2	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB13-SEP2020	EB	Benzo(a)pyrene	0.190	0.0680 J	0.0940 U		ug/l	L
NHFLA-EB13-SEP2020	EB	Benzo(g,h,i)perylene	0.190	0.120 JB	0.190 U		ug/l	L
NHFLA-EB13-SEP2020	EB	Indeno(1,2,3-c,d)pyrene	0.200	0.200 B	0.200 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method BNASIM, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG286000-1 (LB)/ WG286000-1	Benzo (g,h,i)perylene	5.300	< 2	< 20	ug/kg	U/None	L	
WG286000-1 (LB)/ WG286000-1	Indeno(1,2,3-c,d)pyrene	8.600	< 1.9	< 20	ug/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-BH44-A-SEP2020	N	Benzo(g,h,i)perylene	22.0	11.0 J	11.0 U		ug/kg	L
NHFLA-BH44-A-SEP2020	N	Indeno(1,2,3-c,d)pyrene	22.0	13.0 J	22.0 U		ug/kg	L
NHFLA-BH45-A-SEP2020	N	Benzo(g,h,i)perylene	24.0	9.40 J	12.0 U		ug/kg	L

NHFLA-BH45-A-SEP2020	N	Sodium	110	76.3 J	110 U		mg/kg	L
NHFLA-BH45-B-SEP2020	N	Sodium	100	65.1 J	100 U		mg/kg	L
NHFLA-BH49-A-SEP2020	N	Sodium	130	72.7 J	130 U		mg/kg	L
NHFLA-BH49-B-SEP2020	N	Sodium	93.0	64.2 J	93.0 U		mg/kg	L
NHFLA-BH51-A-SEP2020	N	Sodium	95.0	60.5 J	95.0 U		mg/kg	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB13-SEP2020 (EB)/ SN7601-9	Chromium, Hexavalent	0.002800	< 0.00076	< 0.025	mg/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7196, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG286004-1 (LB)/ WG286004-1	Chromium, Hexavalent	0.002900	< 0.00076	< 0.025	mg/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB13-SEP2020	EB	Chromium, Hexavalent	0.0250	0.00280 J	0.0125 U		mg/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-BH44-A-SEP2020 (N)/ SN7601-5		5.870	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-BH44-B-SEP2020 (N)/ SN7601-6		5.860	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-BH45-A-SEP2020 (N)/ SN7601-7		5.830	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-BH45-B-SEP2020 (N)/ SN7601-8		5.830	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-BH49-A-SEP2020 (N)/ SN7601-1		5.950	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-BH49-B-SEP2020 (N)/ SN7601-2		5.940	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-BH51-A-SEP2020 (N)/ SN7601-3		5.920	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-BH51-B-SEP2020 (N)/ SN7601-4		5.920	< 1	< 2	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7470, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB13-SEP2020 (EB)/ SN7601-9	Mercury	0.02100	< 0.013	< 0.2	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7470, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBWNI14HGW1 (LB)/ PBWNI14HGW1	Mercury	0.07000	< 0.013	< 0.2	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7470

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB13-SEP2020	EB	Mercury	0.200	0.0210 J	0.100 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Automated Data Review Detail Report for SN7601
C02NY0079-02, Nike BU 51/52, Launch Area
Nike BU 51/52 Quality Assurance Project Plan

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
SW7471/METHOD/NONE	NHFLA-BH51-B-SEP2020	N	1	Mercury	0.0618	0.00600	0.0200	0.0390	0.033	mg/Kg

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
L	Lab Blank
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG286000-1 detections below LOQ for indeno(123cd)pyrene and benzo (ghi)perylene. These results qualified in samples -001, -002, -003, -004, -005, -007, -008 with U flags and L reason codes. QC batch WG286127-1 detections below LOQ for benzo(a)pyrene, benzo(ghi)perylene and above LOQ for indeno(12cd)pyrene (0.21ug/l). Client sample -009 results for benzo(a)pyrene and benzo(ghi)perylene qualified U/L flags/reason codes and indeno(123cd)pyrene qualified U/L and raised LOQ to 0.2ug/l from 0.19ug/l.
Were target analytes in the field blank less than MDL?		•		All equipment blank detections qualified as non-detect based on method blank detections noted above.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICV outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data rejected during the verification process?		•		

Review Questions

Method: SW6010 (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch NI11ICS1 detections below LOQ for aluminum, chromium, magnesium, potassium and sodium. QC batch NI15ICS1 detections below LOQ for aluminum, arsenic, barium, calcium, chromium, magnesium, nickel, potassium and silver. SODIUM results for all samples were qualified as non-detect at the LOD and qualified with U/L flags/reason codes.
Were target analytes in the field blank less than MDL?			•	Equipment blank detections were not used to qualify soil field sample detections
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•

Review Questions

Method: SW7196 (Chromium, Hexavalent (Colorimetric))				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			H1 flags removed for soil samples - samples analyzed in 6 days versus project criteria of 28 days.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG detection below the LOQ resulted in qualification of sample -009 with U/L flag/reason codes.
Were target analytes in the field blank less than MDL?		•		See above for EB detection (0.0028J) that was qualified non-detect based on method blank detection.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?		•		Only one MS reported. QAPP requires pre-digestion spikes for both soluble and insoluble. Method requirements not met.
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?	•			
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN7636. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 35 results (21.34%) out of the 164 results (sample and field QC samples) reported are qualified based on review and 3 results (1.83%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Trip blank not reported.

Analytical Method	Data Reviewer Comment
BNASIM	No additional comments; see Checklist for detail.
SW6010	No additional comments; see Checklist for detail.
SW6020	No additional comments; see Checklist for detail.
SW7196	No additional comments; see Checklist for detail.
SW7470	No additional comments; see Checklist for detail.
SW7471	No additional comments; see Checklist for detail.

Jim Tomalia

February 11, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB14-SEP2020 (EB)/ SN7636-6	Benzo (g,h,i)perylene	0.1300	< 0.061	< 0.19	ug/l	U/None	V	
NHFLA-EB14-SEP2020 (EB)/ SN7636-6	Indeno(1,2,3-c,d)pyrene	0.2000	< 0.049	< 0.19	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG286127-1 (LB)/ WG286127-1	Benzo(a)pyrene	0.06700	< 0.066	< 0.2	ug/l	U/None	L	
WG286127-1 (LB)/ WG286127-1	Benzo (g,h,i)perylene	0.1200	< 0.065	< 0.2	ug/l	U/None	L	
WG286127-1 (LB)/ WG286127-1	Indeno(1,2,3-c,d)pyrene	0.2100	< 0.052	< 0.2	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB14-SEP2020	EB	Benzo(g,h,i)perylene	0.190	0.130 JB	0.190 U		ug/l	L
NHFLA-EB14-SEP2020	EB	Indeno(1,2,3-c,d)pyrene	0.200	0.200 B	0.200 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method BNASIM, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS4-SEP2020 (MS)/ WG286962-3	Indeno(1,2,3-c,d)pyrene	40.04	49 - 130	10 - 130	percent	J/UJ	M	
NHFLA-MS4-SEP2020 (MS)/ WG286962-3	Chrysene	55.50	57 - 118	10 - 118	percent	J/UJ	M	
NHFLA-MSD4-SEP2020 (SD)/ WG286962-4	Indeno(1,2,3-c,d)pyrene	40.36	49 - 130	10 - 130	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-BH46-A-SEP2020	N	Chrysene	24.0	12.0 JM	12.0 J	-	ug/kg	M/TR
NHFLA-BH46-A-SEP2020	N	Indeno(1,2,3-c,d)pyrene	24.0	9.20 JMM	9.20 J	-	ug/kg	M/TR
NHFLA-DUP6-SEP2020	FD	Chrysene	25.0	19.0 J	19.0 J	-	ug/kg	M/TR
NHFLA-DUP6-SEP2020	FD	Indeno(1,2,3-c,d)pyrene	25.0	9.80 J	9.80 J	-	ug/kg	M/TR

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6010, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-BH46-A-SEP2020 (N)/ SN7636-3	Cobalt	71.51	< 50	< 50	rpd	J/UJ	D3	
NHFLA-BH46-A-SEP2020 (N)/ SN7636-3	Manganese	93.05	< 50	< 50	rpd	J/UJ	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Field Duplicate RPD for SW6010

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-BH46-A-SEP2020	N	Cobalt	1.20	9.56	9.56 J		mg/kg	D3
NHFLA-BH46-A-SEP2020	N	Manganese	0.600	327 NA	327 J		mg/kg	D3
NHFLA-DUP6-SEP2020	FD	Cobalt	2.60	20.2	20.2 J		mg/kg	D3
NHFLA-DUP6-SEP2020	FD	Manganese	1.30	896	896 J		mg/kg	D3

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6010, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBSNI15ICS1 (LB)/ PBSNI15ICS1	Barium	0.03800	< 0.025	< 0.5	mg/kg	U/None	L	
PBSNI15ICS1 (LB)/ PBSNI15ICS1	Chromium	0.06700	< 0.026	< 1	mg/kg	U/None	L	
PBSNI15ICS1 (LB)/ PBSNI15ICS1	Nickel	0.06700	< 0.044	< 1	mg/kg	U/None	L	
PBSNI15ICS1 (LB)/ PBSNI15ICS1	Arsenic	0.1300	< 0.068	< 0.8	mg/kg	U/None	L	
PBSNI15ICS1 (LB)/ PBSNI15ICS1	Magnesium	1.700	< 0.68	< 10	mg/kg	U/None	L	
PBSNI15ICS1 (LB)/ PBSNI15ICS1	Aluminum	4.800	< 0.71	< 30	mg/kg	U/None	L	
PBSNI15ICS1 (LB)/ PBSNI15ICS1	Calcium	4.800	< 1.8	< 10	mg/kg	U/None	L	
PBSNI15ICS1 (LB)/ PBSNI15ICS1	Sodium	5.000	< 1.5	< 100	mg/kg	U/None	L	
PBSNI15ICS1 (LB)/ PBSNI15ICS1	Potassium	8.500	< 2.9	< 100	mg/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW6010

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-BH46-A-SEP2020	N	Sodium	120	89.1 J	120 U		mg/kg	L
NHFLA-DUP6-SEP2020	FD	Sodium	130	94.6 J	130 U		mg/kg	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6010, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS4-SEP2020 (MS)/ SN7636-001S	Iron	-1500	81 - 118	30 - 125	percent	J/X	M	Spike amount Insignificant

NHFLA-EB14-SEP2020	EB	Manganese	2.00	0.470 J	1.00 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB14-SEP2020 (EB)/ SN7636-6	Chromium, Hexavalent	0.002200	< 0.00076	< 0.025	mg/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7196, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS4-SEP2020 (MS)/ WG286246-3	Chromium, Hexavalent	75.99	84 - 110	30 - 125	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-BH46-A-SEP2020	N	Chromium, Hexavalent	1.30	0.810 U	0.810 X		mg/kg	M
NHFLA-DUP6-SEP2020	FD	Chromium, Hexavalent	0.620	0.720	0.720 J	-	mg/kg	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-BH46-A-SEP2020 (N)/ SN7636-1		5.020	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-BH46-B-SEP2020 (N)/ SN7636-2		5.010	< 1	< 2	days	J/X	H1	Test Exceeds UCL
NHFLA-DUP6-SEP2020 (FD)/ SN7636-3		5.020	< 1	< 2	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7470, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB14-SEP2020 (EB)/ SN7636-6	Mercury	0.01400	< 0.013	< 0.2	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7470, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBWNI14HGW1 (LB)/ PBWNI14HGW1	Mercury	0.07000	< 0.013	< 0.2	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7470

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB14-SEP2020	EB	Mercury	0.200	0.0140 J	0.100 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
SW7471/METHOD/NONE	NHFLA-DUP6-SEP2020	FD	1	Mercury	0.0836	0.00630	0.0210	0.0400	0.033	mg/Kg

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
D3	Field Duplicate RPD
H1	Test Hold Time
L	Lab Blank
M	MS Recovery
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG286127-1 detections below LOQ for benzo(a)pyrene, benzo(ghi)perylene and above LOQ for indeno(123cd)pyrene. Client sample -006 result for these analytes are considered non-detect at the LOD and qualified with U/L flags/reason codes. NOTE: Flags for indeno(123cd)pyrene changed from J/L to UL with LOQ raised to 0.20 from 0.19ug/l.
Were target analytes in the field blank less than MDL?		•		See above for two EB detections that were qualified as non-detect due to method blank detections. Aqueous equipment blank detections not used to qualify soil field sample results.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 recoveries biased low for chrysene and indeno(1,2,3-cd)pyrene. Client samples -001 and -003(field duplicate) results for these analytes qualified with J/M/TR flags/reason codes as estimated.
Was the MS/MSD RPD within project acceptance limits?	•			
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICV and CCV outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data rejected during the verification process?		•		

Review Questions

Method: SW6010 (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch NI15ICS1 detections below LOQ for aluminum, arsenic, barium, calcium, chromium, magnesium, nickel, potassium, sodium. Field samples -001 and -003 sodium results qualified non-detect at LOD with U/L flag/reason codes.
Were target analytes in the field blank less than MDL?			•	See method 6020. Detections of aqueous equipment blank not used to qualify soil field sample results.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS ONLY
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 recovery outliers with low bias for antimony, copper, nickel and zinc and high bias for lead - X/M flag/reason codes for antimony (recoveries less than 30%) and J/M flag/reason codes for copper, nickel, zinc, lead. Recoveries for aluminum, calcium, iron, magnesium, manganese had MS contributions that were considered not significant so were not used to qualify results based on the 4X rule. Sample -003 was field duplicate for sample -001 so these results also received the same qualifiers.
Was the MS/MSD RPD within project acceptance limits?	•			
Were the post spike recoveries within project acceptance limits?		•		PDS outliers noted in case narrative for aluminum, calcium, iron, manganese. QC batch data for PDS, serial dilutions not included in lab report. Qualification not required for these outliers based on 4X criteria.
Were the serial dilution RPD values within project acceptance limits?	•			QC batch data for PDS, serial dilutions not included in lab report but no comments in case narrative indicating SD outliers so qualifications not required.
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?		•		Cobalt and manganese were outside of project criteria for field duplicate RPD's so were qualified estimated with J/D3 flags/reason codes. NOTE: D3 flags for sample -002 were removed since this sample was neither a source sample or a field duplicate.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	

Review Questions

Method: SW6010 (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)				
Review Questions	Yes	No	NA	Comment
Were any data rejected during the verification process?	•			Samples -001 and -003 antimony results due to low bias MS/MSD recoveries.

Review Questions

Method: SW6020 (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch NI22IMW2 had detections above the LOQ for copper and zinc and below the LOQ for barium, manganese, aluminum, antimony, beryllium, cadmium, chromium, cobalt, iron, lead, magnesium, nickel, selenium, sodium, thallium and vanadium. Client sample -006 results were qualified as non-detect at the LOD with U/L flags/reason codes for copper, manganese, zinc, antimony, chromium, iron, magnesium, sodium and vanadium and non-detect at the LOQ for aluminum.
Were target analytes in the field blank less than MDL?		•		Sample -006 was equipment blank with detections qualified as noted above. Non qualified detections include potassium and calcium. Data was not used to qualify soil field samples.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN7689. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 160 results (19.02%) out of the 841 results (sample and field QC samples) reported are qualified based on review and 14 results (1.66%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
BNASIM	No additional comments; see Checklist for detail.
LYDKHN	No additional comments; see Checklist for detail.
SW6010	No additional comments; see Checklist for detail.
SW6020	No additional comments; see Checklist for detail.
SW7196	No additional comments; see Checklist for detail.
SW7470	No additional comments; see Checklist for detail.
SW7471	No additional comments; see Checklist for detail.
SW8082	NOTE: PCB equipment blank sample results were not available in the FUDSChem data base. Required qualifications are noted in the review checklist section but could not be applied to database so do not appear in associated data tables in this report.
SW8260	No additional comments; see Checklist for detail.
SW8270	No additional comments; see Checklist for detail.
SW9045	No additional comments; see Checklist for detail.

Jim Tomalia

March 04, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG287058-2 (BS)/ WG287058-2	Chrysene	54.42	57 - 118	10 - 118	percent	J/UJ	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS5-SEP2020 (MS)/ WG287058-3	Pyrene	52.77	55 - 117	10 - 117	percent	J/UJ	M	
NHFLA-MS5-SEP2020 (MS)/ WG287058-3	Chrysene	52.77	57 - 118	10 - 118	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP7-SEP2020	FD	Chrysene	22.0	37.0	37.0 J	-	ug/kg	M
NHFLA-DUP7-SEP2020	FD	Pyrene	22.0	43.0	43.0 J	-	ug/kg	M
NHFLA-SL11A-A-SEP2020	N	Chrysene	20.0	34.0 M	34.0 J	-	ug/kg	M
NHFLA-SL11A-A-SEP2020	N	Pyrene	20.0	54.0 M	54.0 J	-	ug/kg	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method LYDKHN, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MSD5-SEP2020 (SD)/ WG286408-5	Total Organic Carbon	136.1	75 - 125	30 - 150	percent	J/None	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for LYDKHN

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP7-SEP2020	FD	Total Organic Carbon	950	17000	17000 J		ug/g	M
NHFLA-SL11A-A-SEP2020	N	Total Organic Carbon	820	23000	23000 J		ug/g	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method LYDKHN, Prep Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of extraction found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP7-SEP2020 (FD)/ SN7689-2		5.010	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-SL11A-A-SEP2020 (N)/ SN7689-1		4.970	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-SL11B-A-SEP2020 (N)/ SN7689-4		4.940	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-SL25-A-SEP2020 (N)/ SN7689-3		4.970	< 0	< 0	days	J/X	H2	Prep Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6010, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-SL11A-A-SEP2020 (N)/ SN7689-2	Copper	109.0	< 50	< 50	rpd	J/UJ	D3	
NHFLA-SL11A-A-SEP2020 (N)/ SN7689-2	Chromium	55.16	< 50	< 50	rpd	J/UJ	D3	
NHFLA-SL11A-A-SEP2020 (N)/ SN7689-2	Selenium	62.90	< 1.6	< 1.6	mg/kg	J/UJ	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Field Duplicate RPD for SW6010

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP7-SEP2020	FD	Chromium	1.90	17.2	17.2 J	-	mg/kg	D3/M
NHFLA-DUP7-SEP2020	FD	Copper	4.60	31.8	31.8 J		mg/kg	D3
NHFLA-DUP7-SEP2020	FD	Selenium	1.90	1.00 J	1.30 UJ		mg/kg	L/D3
NHFLA-SL11A-A-SEP2020	N	Chromium	1.60	30.3 N	30.3 J	-	mg/kg	D3/M
NHFLA-SL11A-A-SEP2020	N	Copper	3.90	108 NEA	108 J		mg/kg	D3
NHFLA-SL11A-A-SEP2020	N	Selenium	1.60	63.9 NEA	63.9 J		mg/kg	D3

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6010, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBSNI16ICS2 (LB)/ PBSNI16ICS2	Barium	0.05600	< 0.025	< 0.5	mg/kg	U/None	L	
PBSNI16ICS2 (LB)/ PBSNI16ICS2	Chromium	0.08900	< 0.026	< 1	mg/kg	U/None	L	
PBSNI16ICS2 (LB)/ PBSNI16ICS2	Selenium	0.1900	< 0.17	< 1	mg/kg	U/None	L	
PBSNI16ICS2 (LB)/ PBSNI16ICS2	Zinc	0.2300	< 0.17	< 2	mg/kg	U/None	L	
PBSNI16ICS2 (LB)/ PBSNI16ICS2	Sodium	13.00	< 1.5	< 100	mg/kg	U/None	L	
PBSNI16ICS2 (LB)/ PBSNI16ICS2	Potassium	14.00	< 2.9	< 100	mg/kg	U/None	L	
PBSNI16ICS2 (LB)/ PBSNI16ICS2	Iron	2.800	< 1.4	< 10	mg/kg	U/None	L	
PBSNI16ICS2 (LB)/ PBSNI16ICS2	Magnesium	5.700	< 0.68	< 10	mg/kg	U/None	L	
PBSNI16ICS2 (LB)/ PBSNI16ICS2	Nickel	0.1000	< 0.044	< 1	mg/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW6010

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP7-SEP2020	FD	Selenium	1.90	1.00 J	1.30 UJ		mg/kg	L/D3
NHFLA-DUP7-SEP2020	FD	Sodium	190	129 J	190 U		mg/kg	L
NHFLA-SL11A-A-SEP2020	N	Sodium	160	138 J	160 U		mg/kg	L
NHFLA-SL11B-A-SEP2020	N	Selenium	1.70	1.30 J	1.70 U		mg/kg	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6010, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS5-SEP2020 (MS)/ SN7689-001S	Copper	-258.2	81 - 117	30 - 125	percent	J/X	M	Spike amount Insignificant
NHFLA-MS5-SEP2020 (MS)/ SN7689-001S	Selenium	-703.2	78 - 111	30 - 125	percent	J/X	M	Spike amount Insignificant

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB15-2-SEP2020	EB	Chromium, Hexavalent	0.0250	0.00830 J	0.0125 U		mg/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS5-SEP2020 (MS)/ WG286246-5	Chromium, Hexavalent	82.54	84 - 110	30 - 125	percent	J/UJ	M	Diluted Out

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8082, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP7-SEP2020 (FD)/ SN7689-2	Decachlorobiphenyl	57.60	59 - 124	10 - 124	percent	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Surrogate for SW8082

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP7-SEP2020	FD	PCB-1016 (Aroclor 1016)	18.0	8.90 U	8.90 UJ		ug/kg	I
NHFLA-DUP7-SEP2020	FD	PCB-1221 (Aroclor 1221)	18.0	8.90 U	8.90 UJ		ug/kg	I
NHFLA-DUP7-SEP2020	FD	PCB-1232 (Aroclor 1232)	18.0	10.0 U	10.0 UJ		ug/kg	I
NHFLA-DUP7-SEP2020	FD	PCB-1242 (Aroclor 1242)	18.0	8.90 U	8.90 UJ		ug/kg	I
NHFLA-DUP7-SEP2020	FD	PCB-1248 (Aroclor 1248)	18.0	8.90 U	8.90 UJ		ug/kg	I

In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Quality Control Outliers for test method SW8260, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS5-SEP2020 (SD)/ WG287044-7	1,2-Dichlorobenzene	27.85	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS5-SEP2020 (SD)/ WG287044-7	m,p-Xylene	27.98	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS5-SEP2020 (SD)/ WG287044-7	1,4-Dichlorobenzene	28.57	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS5-SEP2020 (SD)/ WG287044-7	trans-1,2-Dichloroethene	28.57	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS5-SEP2020 (SD)/ WG287044-7	cis-1,2-Dichloroethene	29.79	< 20	< 20	rpd	J/UJ	D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP7-SEP2020 (FD)/ SN7689-2	1-Bromo-4-fluorobenzene (4-Bromofluorobenzene)	78.50	79 - 119	10 - 119	percent	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

NHFLA-DUP7-SEP2020	FD	Trichloroethene (TCE)	5.20	2.60 U	2.60 UJ		ug/kg	D/I
NHFLA-DUP7-SEP2020	FD	Trichlorofluoromethane	10.0	5.20 U	5.20 UJ		ug/kg	D/I
NHFLA-DUP7-SEP2020	FD	Vinyl chloride	10.0	5.20 U	5.20 UJ		ug/kg	I

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-SL11A-A-SEP2020 (N)/ SN7689-1		14.13	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-SL25-A-SEP2020 (N)/ SN7689-3		14.01	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, Trip Blank

The purpose of trip blanks is to determine the existence and magnitude of cross-contamination problems resulting from the shipping of samples. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in trip blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-TB17-SEP2020 (TB)/ SN7689-6	Methylene chloride	1.400	< 1.1	< 5	ug/l	U/None	T	
NHFLA-TB18-SEP2020 (TB)/ SN7689-7	Methylene chloride	1.300	< 1.1	< 5	ug/l	U/None	T	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB15-2-SEP2020 (EB)/ SN7689-5	Diethyl phthalate	5.400	< 1.9	< 9.6	ug/l	U/None	V	
NHFLA-EB15-2-SEP2020 (EB)/ SN7689-5	Bis(2-ethylhexyl)phthalate	55.00	< 1.6	< 9.6	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG286216-1 (LB)/ WG286216-1	Bis(2-ethylhexyl)phthalate	39.00	< 1.7	< 10	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB15-2-SEP2020	EB	Bis(2-ethylhexyl)phthalate	9.60	55.0 BL	55.0 J	+	ug/l	L/C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG286208-1 (LB)/ WG286208-1	Bis(2-ethylhexyl)phthalate	100.0	< 98	< 330	ug/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP7-SEP2020	FD	Bis(2-ethylhexyl)phthalate	360	530	530 J		ug/kg	L/M
NHFLA-SL25-A-SEP2020	N	Bis(2-ethylhexyl)phthalate	320	370	370 J	+	ug/kg	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG286216-2 (BS)/ WG286216-2	2,4-Dinitrophenol	0.000	12 - 143	10 - 143	percent	J/X	C

In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS5-SEP2020 (MS)/ WG287057-3	4-Chloroaniline	0.000	17 - 106	10 - 106	percent	J/X	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Table of Results with Modified Qualifiers

Modified Qualifiers for test method SW8270							
FieldSample ID	Type	Analyte	LOQ	Lab Result	ADR Result	Modified Result	Reason
NHFLA-DUP7-SEP2020	FD	2,4-Dimethylphenol	360	270 U	270 UJ	270 UJ	M/D
NHFLA-SL11A-A-SEP2020	N	2,4-Dimethylphenol	320	240 UM	240 UJ	240 UJ	M/D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Notes:
Shaded cells identify any compounds that were outside the acceptable MS/MSD recovery limit.
Bold = Bolded result indicates positively identified compounds in the parent sample

µg/L = micrograms per liter
%R = percent recovery
ID = Identification
MS = Matrix Spike
MSD = Matrix Spike Duplicate
NA = Not Applicable
RPD = Relative Percent Difference
U = Compound was not detected and was reported at the limit of quantitation (LOQ).
VOC = volatile organic compound

UJ = The analyte was analyzed for, but was not detected. The reported LOQ is approximate.
J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D	MS RPD
D3	Field Duplicate RPD
H1	Test Hold Time
H2	Prep Hold Time
I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
T	Trip Blank
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG287058 LCS had a low bias for chrysene. Only MS/MSD were run in this batch so qualifications were not required based on this low bias outlier.
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 recoveries were biased low for pyrene and chrysene. Sample -001 and -002 (field duplicate) results for these analytes were qualified estimated with J/M flags/reason codes.
Was the MS/MSD RPD within project acceptance limits?		•		Sample -001 MS/MSD RPD's were outliers for multiple analytes. See MS/MSD RPD outlier summary qualifier table for details.
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICV and CCV outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: LYDKHN (Lloyd Kahn Method for the Determination of Total Organic Carbon in Sediment, USEPA Region II Method)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?			•	
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 MSD recovery only was biased high as reported in lab SDG. The database recoveries did not match the recoveries noted in the lab report (124%/138% in SDG and 114%/121% in FUDSChem). The SDG recoveries were used to qualify field results. Field samples -001 and -002 (field duplicate) were qualified estimated with J/M flag/reason codes.
Was the MS/MSD RPD within project acceptance limits?	•			
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW6010 (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		Prep blank PBSNI16ICS2 had detections below the LOD for barium, chromium, iron, magnesium, nickel, potassium, selenium, sodium, zinc (calcium detected and reanalyzed in different batch). Samples -001 and -002 SODIUM and samples -002, -004 SELENIUM results were qualified non-detect at LOD with U/L flags/reason codes.
Were target analytes in the field blank less than MDL?		•		Equipment blank aqueous matrix detections were not used to qualify soil sample results.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 MS/MSD recoveries were outliers biased low for chromium and antimony. MS or MSD but not both were outliers biased high for beryllium, lead, potassium. MS recoveries were not considered statistically reliable due to 4X rule so were not used to qualify results for aluminum, calcium, copper, iron, magnesium manganese, selenium, zinc. Field sample -001 and -002 (field duplicate) results were qualified estimated with J/M+ flags/reason codes for beryllium, lead and potassium and biased low for chromium with J/M flag/reason codes and considered unusable with rejected X/M flags/reason codes for antimony.
Was the MS/MSD RPD within project acceptance limits?		•		Sample -001 MS/MSD RPD was outlier for magnesium. Samples -001 and -002 (field duplicate) magnesium results were qualified estimated. NOTE: qualification based on lab SDG QC data, database values do not reconcile with lab report.
Were the post spike recoveries within project acceptance limits?		•		According to the lab SDG case narrative sample -001 PDS recoveries were outliers for barium, copper, selenium, zinc. However the batch QC data was not provided so qualifications were not applied based on these case narrative notes alone . PDS outliers for aluminum, calcium, iron, magnesium, manganese were all subject to 4X rule so were not used to qualify results.
Were the serial dilution RPD values within project acceptance limits?		•		Sample -001 SD responses were outliers for copper, iron, magnesium, manganese, selenium, zinc according to the lab SDG case narrative notes only (batch data not provided) so qualifications were not applied based on these notes alone.

Review Questions

Method: SW6010 (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)				
Review Questions	Yes	No	NA	Comment
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?		•		Sample -001 and its field duplicate -002 RPD's were outliers for chromium, copper and selenium so were qualified as estimated with J/D3 flags/reason codes. NOTE: Selenium is not identified as an outlier in FUDSChem table due to result below LOD in sample -002 but qualification was required.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		Serial dilution and PDS case narrative outlier comments were not supported in the batch QC data and CCB detection for magnesium was not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?	•			Antimony results for samples -001 and -002 due to MS recovery low bias.

Review Questions

Method: SW6020 (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch PBWN122IMW2 method blank had detections above the LOD for barium, copper, manganese, zinc. Field sample -005 copper and manganese results were qualified as non-detect at LOD with U/L flag/reason codes. Method blank detections below LOD for aluminum, antimony, beryllium, cadmium, chromium, cobalt, iron, lead, magnesium, nickel, selenium, sodium, thallium, vanadium resulted in qualification for aluminum, chromium, iron, magnesium, sodium, vanadium as non-detect at the LOD with U/L flag/reason codes for sample -005.
Were target analytes in the field blank less than MDL?		•		Equipment blank had detections below the LOD for aluminum, chromium, copper, iron, magnesium, manganese, potassium, sodium, vanadium. These detections were not used to qualify soil sample results.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•

Review Questions

Method: SW8082 (Polychlorinated Biphenyls (PCB))

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?		•		COC and LAB REPORT SDG included PCB results as requested but FUDSChem databse did not include the PCB data for aqueous sample -005 (equipment blank). See below for qualifications for sample -005 that could not be applied to database.
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?		•		Water matrix QC batch did not include MS recovery data.
Were MS/MSD recoveries within project acceptance limits?	•			Soil batch.
Was the MS/MSD RPD within project acceptance limits?	•			
Were surrogate recoveries within project acceptance limits?		•		One of two surrogates were outliers biased low in field sample -002 and equipment blank -005. Samples -002 and -005 results should be considered estimated and qualified with UJ/I flags/reason codes. NOTE: Sample -005 results were not in database so could not be qualified as noted above.
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary

Review Questions

Method: SW8260 (Volatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			Removed qualifiers and reason codes for samples -01RA2 and -03RA since both were analyzed on the 14th day from sample collection.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Sample -002 had 1 of 4 surrogate recoveries biased low so all results were qualified as estimated with UJ/I flags/reason codes.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch method blank WG286428-2 had a detection below the LOD for methylene chloride. Field samples -006, -007, -005 results for this analyte were qualified non-detect at the LOD with U/L flags/reason codes.
Were target analytes in the field blank less than MDL?		•		Equipment blank had detections below the LOD for methylene chloride and toluene and trip blanks -006 and -007 had detections below LOD for methylene chloride.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 recoveries were biased low for MS and MSD for 1,2,4-trichlorobenzene and 1,2,3-trichlorobenzene and MS or MSD but not both biased low for 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene. These results in both samples -001 and -002(field duplicate) were qualified with UJ/M flags/reason codes.
Was the MS/MSD RPD within project acceptance limits?		•		Sample -001 MS/MSD RPD's were outliers for most target analytes so these results in samples -001 and -002 (field duplicate) were qualified estimated with UJ/D flags/reason codes.
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICAL outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?		•		Sample -005 (equipment blank) re-extraction was performed outside of project required holding times so these results would be considered estimated and qualified with UJ/J flags.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		QC batch WG286216 method blank and LCS surrogate recoveries were biased low and below 10% for at least 2 of 3 acid fraction surrogates. Qualification of field results was not required based on these QC sample surrogate recovery outliers.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG286216 had a detection above the LOQ for bis-2-ethylhexylphthalate and QC batch WG286208 had a detection below the LOQ for the same analyte. Field samples -002, -003, -005 bis-2-ethylhexylphthalate results were qualified as estimated with J/L flag/reason codes.
Were target analytes in the field blank less than MDL?		•		Equipment blank original run had detections below the LOD for diethylphthalate and above the LOQ for bis-2-ethylhexylphthalate and equipment blank re-analysis had detections below the LOD for caprolactam and diethylphthalate. Soil sample field results were not qualified based on these aqueous matrix equipment blank detections.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG286216 recoveries were biased high for benzaldehyde and bis-2-ethylhexylphthalate and biased low and below 10% for most of the acid fraction analytes. Equipment blank sample -005 results for bis-2-ethylhexylphthalate were qualified as estimated with J/C+ flag/reason codes and acid fraction results were qualified as unusable with X/C flags reason codes with the exception of the methylphenols and 4-chloro-3-methylphenol with were qualified estimated with UJ/C flags reason codes. QC batch WG286966 equipment blank re-analysis batch had a high bias for benzaldehyde only so these results were not qualified based on this high bias QC outlier. QC batch WG286208 had low bias recoveries for 4-chloroaniline and 0% recovery for atrazine and high bias recoveries for benzaldehyde and 3,3-dichlorobenzidene. Field samples -001, -002, -003, -004 4-chloroaniline results were qualified estimated with UJ/C flags/reason codes. Atrazine was qualified unusable/rejected in sample -004 with X/C flags/reason codes and qualified estimated with J/C flags/reason codes in samples -001, -002, -003. QC batch WG287057 low bias for benzaldehyde and high bias for caprolactam were associated with MS/MSD QC samples only so qualifications were not applied based on these LCS recovery outliers.
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 recoveries were outliers biased low and less than 10% (0% recovery) for 4-chloroaniline, biased low but above rejection criteria for 3-nitroanline and bis-2-ethylhexylphthalate, biased low for MS or MSD but not both for 2,4-dimethylphenol and caprolactam and biased high for benzaldehyde. Field samples -001 and -002(field duplicate) results were qualified as unusable for 4-chloroaniline with X/M/C qualifiers and estimated with UJ/M flags for caprolactam, 2,4-dimethylpheno. and 3-nitroaniline and estimated with J/M flags for bis- 2-ethylhexylphthalate.
Was the MS/MSD RPD within project acceptance limits?		•		Sample -001 MS/MSD RPD were outliers for 2,4 -dimethylphenol. Sample -001 and -002 (field duplicate) results for this analyte were qualified estimated.
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			ICAL, ICV and CCV outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Were any data recommended for rejection (exclusion) in the data validation process?	•			Sample -005 acid fraction analytes (most) based on LCS recovery low bias. Sample -004 atrazine results based on LCS recovery low bias. Samples -001 and -002 4-chloroaniline results based on MS recovery low bias.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN7764. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 12 results (1.95%) out of the 615 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

NOTE: Validation report re-issued based on stage 2A review question. Original report was inadvertently generated using Stage 2B criteria.

Analytical Method	Data Reviewer Comment
BNASIM	No additional comments; see Checklist for detail.
SW6010	No additional comments; see Checklist for detail.
SW6020	No additional comments; see Checklist for detail.
SW7196	No additional comments; see Checklist for detail.

SW7471	No additional comments; see Checklist for detail.

Jim Tomalia

January 25, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method SW6010, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBSNI22ICS1 (LB)/ PBSNI22ICS1	Nickel	0.05800	< 0.044	< 1	mg/kg	U/None	L

PBSNI24ICS1 (LB)/ PBSNI24ICS1	Iron	2.000	< 1.4	< 10	mg/kg	U/None	L	
PBSNI24ICS1 (LB)/ PBSNI24ICS1	Calcium	2.600	< 1.8	< 10	mg/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW6010

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-BH50-A-SEP2020	N	Antimony	0.950	0.600 J	0.600 U		mg/kg	L
NHFLA-BH50-B-SEP2020	N	Antimony	0.750	0.590 J	0.750 U		mg/kg	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

NHFLA-EB15-SEP2020	EB	Manganese	2.00	0.620 J	1.00 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB15-SEP2020 (EB)/ SN7764-15	Chromium, Hexavalent	0.007000	< 0.00076	< 0.025	mg/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7196, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG286394-1 (LB)/ WG286394-1	Chromium, Hexavalent	0.002700	< 0.00076	< 0.025	mg/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB15-SEP2020	EB	Chromium, Hexavalent	0.0250	0.00700 J	0.0125 U		mg/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-BH42-A-SEP2020 (MS)/ WG287062-3	Chromium, Hexavalent	58.08	84 - 110	30 - 125	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-BH42-A-SEP2020	N	Chromium, Hexavalent	0.690	0.410 U	0.410 UJ		mg/kg	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-BH36-A-SEP2020 (N)/ SN7764-11		8.830	< 1	< 2	days	J/X	H1	Test Exceeds UCL

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
L	Lab Blank
M	MS Recovery
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS ONLY
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	LCS ONLY
Was a MS/MSD pair prepared with each batch?		•		
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		Case narrative comments for ICV, CCV outliers in 8270D SIM-PAH analysis did not indicate if the issues were resolved.
Were DoD QSM corrective actions followed if deviations were noted?		•		See above for unresolved issues.
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW6010 (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		Prep blanks had detection below the LOQ in the following QC batches for the metals noted: NI22ICS1 - aluminum, calcium, chromium, iron, magnesium, nickel, potassium, vanadium, sodium. QC batch NI24CS1 - aluminum, antimony, arsenic, calcium, chromium, iron, magnesium, sodium. Antimony results in client samples NHFLA-BH50-A-SEP2020 and NHFLABH50- B-SEP2020 were qualified as non-detect at the LOD with a U flag due to method blank detections.
Were target analytes in the field blank less than MDL?		•		Aqueous equipment blank detections were not used to qualify soil field sample results.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	LCS only
Was a MS/MSD pair prepared with each batch?		•		
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	Not indicated in laboratory case narrative.
Were the serial dilution RPD values within project acceptance limits?			•	Not indicated in laboratory case narrative.
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW6020 (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch NI23IMW2 prep blank had detections below theLOQ for aluminum, antimony, beryllium, cadmium, calcium,chromium, cobalt, copper, iron, lead, magnesium, nickel,selenium, silver, sodium, thallium, vanadium. Client sample equipment blank results for beryllium, chromium, cobalt, iron,lead, vanadium and manganese were qualified as non-detectat the LOD with U flags due to associated method blank detections. According to the laboratory case narrative barium, manganese and zinc were all outside of acceptance criteria in this original prep blank so sample was reprocessed in the following batch for these metals. QC batchNI2IMW2 had a detection below the LOQ for manganese and above the LOQ for barium - client sample equipment blank results for BARIUM were considered to be non-detect at the LOD and qualified with a U flag due to associated method blank detections.
Were target analytes in the field blank less than MDL?		•		Multiple detections below LOQ and above LOQ for aluminum, calcium, copper, magnesium, nickel, potassium, sodium. This was only aqueous sample in submittal so results were not used to qualify soil field samples.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS ONLY
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	LCS only
Was a MS/MSD pair prepared with each batch?		•		
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	Not indicated in SDG case narrative.
Were the serial dilution RPD values within project acceptance limits?			•	Not indicated in SDG case narrative.
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			

Review Questions

Method: SW6020 (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW7196 (Chromium, Hexavalent (Colorimetric))				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG286394 method blank had a detection below the LOQ. Client sample NHFLA-EB15-SEP2020 was qualified as non-detect with a U flag based on the method blank detection.
Were target analytes in the field blank less than MDL?		•		Equipment blank had detection below LOQ. Aqueous equipment blank not used to qualify soil field sample results.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample NHFLA-BH42-A-SEP2020 two MS recoveries were outliers biased low (58% and 16%) so sample was qualified as estimated with M flag. NOTE: sample MS/MSD were re-analyzed on 10/15/2020 with similar recovery outliers so original results were reported.
Was the MS/MSD RPD within project acceptance limits?			•	RPD based on recoveries was 115%. NOTE: Spikes were performed at two significantly different concentration levels (1894mg/kg and 59.97mg/kg) so the assumption is that these were high and low level matrix spikes rather than a spike and spike dup.
Were the post spike recoveries within project acceptance limits?			•	Not indicated in SDG case narrative.
Were the serial dilution RPD values within project acceptance limits?			•	Not indicated in SDG case narrative.
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		Case narrative comments associated with with hexavalent chromium analysis outliers were not resolved.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?		•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN7811. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 148 results (10.77%) out of the 1374 results (sample and field QC samples) reported are qualified based on review and 15 results (1.09%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Hydrazine field sample results and QC are included in this SDG but electronic data is in separate SDG (14383-1). Please reference validation report 14383-1 for data qualification summary.

Analytical Method	Data Reviewer Comment
BNASIM	No additional comments; see Checklist for detail.

Jim Tomalia

February 11, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG287058-2 (BS)/ WG287058-2	Chrysene	54.42	57 - 118	10 - 118	percent	J/UJ	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-BH37-A-SEP2020	N	Chrysene	25.0	11.0 JL	11.0 J	-	ug/kg	C/TR
NHFLA-BH37-B-SEP2020	N	Chrysene	22.0	4.80 JL	4.80 J	-	ug/kg	C/TR

NHFLA-BH39-B-SEP2020	N	Chrysene	24.0	4.10 JL	4.10 J	-	ug/kg	C/TR
NHFLA-BH40-A-SEP2020	N	Chrysene	23.0	16.0 JL	16.0 J	-	ug/kg	C/TR
NHFLA-BH40-B-SEP2020	N	Chrysene	22.0	11.0 UL	11.0 UJ		ug/kg	C
NHFLA-DUP10-SEP2020	FD	Chrysene	22.0	74.0 L	74.0 J	-	ug/kg	C
NHFLA-DUP8-SEP2020	FD	Chrysene	22.0	2.40 JL	2.40 J	-	ug/kg	C/TR
NHFLA-DUP9-SEP2020	FD	Chrysene	24.0	6.60 JL	6.60 J	-	ug/kg	C/TR
NHFLA-SL26-A-SEP2020	N	Chrysene	23.0	240 L	240 J	-	ug/kg	C
NHFLA-SL27-A-SEP2020	N	Chrysene	22.0	450 L	450 J	-	ug/kg	C
NHFLA-SL28-A-SEP2020	N	Chrysene	23.0	210 L	210 J	-	ug/kg	C
NHFLA-SL31-A-SEP2020	N	Chrysene	23.0	110 L	110 J	-	ug/kg	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method LYDKHN, Prep Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of extraction found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP10-SEP2020 (FD)/ SN7811-13		11.76	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-SL26-A-SEP2020 (N)/ SN7811-15		11.72	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-SL27-A-SEP2020 (N)/ SN7811-14		11.74	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-SL28-A-SEP2020 (N)/ SN7811-11		11.78	< 0	< 0	days	J/X	H2	Prep Exceeds UCL
NHFLA-SL31-A-SEP2020 (N)/ SN7811-12		11.76	< 0	< 0	days	J/X	H2	Prep Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6010, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBSNI24ICS1 (LB)/ PBSNI24ICS1	Vanadium	0.06400	< 0.037	< 1	mg/kg	U/None	L	
PBSNI24ICS1 (LB)/ PBSNI24ICS1	Chromium	0.09600	< 0.026	< 1	mg/kg	U/None	L	
PBSNI24ICS1 (LB)/ PBSNI24ICS1	Arsenic	0.1200	< 0.068	< 0.8	mg/kg	U/None	L	
PBSNI24ICS1 (LB)/ PBSNI24ICS1	Antimony	0.1600	< 0.07	< 0.8	mg/kg	U/None	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6010, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6010, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-BH39-A-SEP2020 (SD)/ SN7811-004P	Magnesium	21.49	< 20	< 20	rpd	J/UJ	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS RPD for SW6010

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-BH39-A-SEP2020	N	Magnesium	22.0	2130 N*	2130 J	-	mg/kg	M/D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB17-SEP2020 (EB)/ SN7811-16	Manganese	0.4900	< 0.35	< 2	ug/l	U/None	V

In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-BH38-A-SEP2020 (MS)/ WG287289-3	Chromium, Hexavalent	68.07	84 - 110	30 - 125	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-BH38-A-SEP2020	N	Chromium, Hexavalent	0.580	0.350 U	0.350 X		mg/kg	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-BH37-A-SEP2020 (N)/ SN7811-9		13.98	< 1	< 2	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7471, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP9-SEP2020 (SD)/ SN7811-006P	Mercury	63.98	80 - 124	30 - 125	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW7471

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-BH39-B-SEP2020	N	Mercury	0.0380	0.125	0.125 J	-	mg/kg	M
NHFLA-DUP9-SEP2020	FD	Mercury	0.0330	0.141 N	0.141 J	-	mg/kg	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB17-SEP2020 (EB)/ SN7811-16	Benzene	0.2700	< 0.26	< 1	ug/l	U/None	V	
NHFLA-EB17-SEP2020 (EB)/ SN7811-16	Methylene chloride	1.200	< 1.1	< 5	ug/l	U/None	V	
NHFLA-EB17-SEP2020 (EB)/ SN7811-16	Toluene	1.400	< 0.27	< 1	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG287174-2 (LB)/ WG287174-2	Methylene chloride	10.00	< 7.9	< 25	ug/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG286777-1 (BS)/ WG286777-1	4-Methyl-2-pentanone (MIBK)	130.6	67 - 130	10 - 130	percent	J/None	C	
WG286777-1 (BS)/ WG286777-1	Methyl tert-butyl ether (MTBE)	69.80	71 - 124	10 - 124	percent	J/UJ	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB17-SEP2020	EB	Methyl tert-butyl ether (MTBE)	1.00	0.500 UL	0.500 UJ		ug/l	C
NHFLA-TB19-SEP2020	TB	Methyl tert-butyl ether (MTBE)	1.00	0.500 UL	0.500 UJ		ug/l	C
NHFLA-TB20-SEP2020	TB	Methyl tert-butyl ether (MTBE)	1.00	0.500 UL	0.500 UJ		ug/l	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP10-SEP2020 (FD)/ SN7811-13	Dibromofluoromethane	122.0	78 - 119	10 - 119	percent	J/None	I	
NHFLA-DUP10-SEP2020 (FD)/ SN7811-13	1-Bromo-4-fluorobenzene (4-Bromofluorobenzene)	58.80	79 - 119	10 - 119	percent	J/UJ	I	
NHFLA-SL27-A-SEP2020 (N)/ SN7811-14	Dibromofluoromethane	121.0	78 - 119	10 - 119	percent	J/None	I	
NHFLA-SL31-A-SEP2020 (N)/ SN7811-12	Dibromofluoromethane	120.0	78 - 119	10 - 119	percent	J/None	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Trip Blank

The purpose of trip blanks is to determine the existence and magnitude of cross-contamination problems resulting from the shipping of samples. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in trip blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-TB19-SEP2020 (TB)/ SN7811-17	Methylene chloride	1.200	< 1.1	< 5	ug/l	U/None	T	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG286713-1 (LB)/ WG286713-1	Bis(2-ethylhexyl)phthalate	2.700	< 1.7	< 10	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D	MS RPD
D3	Field Duplicate RPD
H1	Test Hold Time
H2	Prep Hold Time
I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
T	Trip Blank
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		QC batch LCS WG287174-2 had 1 of 3 surrogates biased high. Qualification of client sample results was not required based on this QC outlier alone.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG287058 recovery for chrysene was biased low. The following client sample results for chrysene were qualified with J/C flag/reason codes - samples -001, -002, -003, -004, -005, -006, -007, -008, -009, -010, -011, -012, -013, -014, -015.
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			Field sample/field duplicate combinations are sample -002/-003, -005/-006, -012/-013. The field duplicate RPD summary table includes other combinations that were not used to qualify results.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		Internal standard and calibration outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data rejected during the verification process?		•		

Review Questions

Method: LYDKHN (Lloyd Kahn Method for the Determination of Total Organic Carbon in Sediment, USEPA Region II Method)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			H2 flags removed from all samples - actual hold time was 12 days versus 14 days project criteria.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?			•	
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			Field sample/field duplicate combinations are sample -002/-003, -005/-006, -012/-013. The field duplicate RPD summary table includes other combinations that were not used to qualify results.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•		

Review Questions

Method: SW6010 (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch NI24ICS1 had detections below the LOQ for aluminum, antimony, arsenic, calcium, chromium, iron, magnesium, sodium and vanadium. Antimony results were qualified as non-detect at the LOD with U/L flags/reason codes for samples -001, -002, -004, -005, -007, -008, -009, -010, -011, -012, -013, -014. Sodium results were qualified as non-detect at the LOD for samples -001, -004, -005, -006, -007, -008, -009, -010 and non-detect at the LOQ for samples -002, -003 and -014. QC batch PBSNI25ICS1 had detections below LOQ for nickel, sodium, zinc, magnesium, iron, chromium, calcium. Qualifications were not applied based in this QC batch data.
Were target analytes in the field blank less than MDL?		•		See method 6020 narration for summary of equipment blank detections. Aqueous equipment and trip blank detections were not used to qualify soil field samples.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -004 recoveries were biased low for antimony, arsenic, chromium, cobalt, copper, lead, nickel, potassium, silver, vanadium, barium, magnesium, zinc. Sample -004 results for these metals were qualified with J/UJ flags and M reason codes as estimated. MS recoveries for aluminum, calcium, iron, manganese were not used to qualify results based on the 4X criteria rule.
Was the MS/MSD RPD within project acceptance limits?		•		Sample -004 MS/MSD RPD was an outlier for magnesium. Sample -004 field results for this metal was qualified with a D flag.
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	

Review Questions

Method: SW6010 (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)				
Review Questions	Yes	No	NA	Comment
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?		•		Field duplicate RPD's were outliers for calcium, chromium, lead, vanadium, cobalt and copper for parent sample/field duplicate combination -012/-013. These metals for both samples were qualified as estimated with J/UJ flags and D3 reason codes. Field sample/field duplicate combinations are sample -002/-003, -005/-006, -012/-013. The field duplicate RPD summary table includes other combinations that were not used to qualify results.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC prep blank PBWMI23IMW2 had detections below the LOQ for aluminum, antimony, beryllium, cadmium, calcium, chromium, cobalt, copper, iron, lead, magnesium, manganese, nickel, selenium, silver, sodium, thallium, vanadium. Sample -016 results for aluminum, lead, manganese, nickel, vanadium were qualified as non-detect at the LOD and qualified with U/L flags/reason codes. Lead LOQ was elevated to the level of detection accordingly.
Were target analytes in the field blank less than MDL?		•		Equipment blank detections included all above metals qualified based on method blank detections in addition to arsenic, calcium (above LOQ), potassium.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary

Review Questions

Method: SW7196 (Chromium, Hexavalent (Colorimetric))				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			H1 flags were removed for all samples since all were tested within project hold time criteria.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG286494 and WG287289 method blanks had detections below the LOQ. Field samples -010 and -016 were qualified non-detect at the LOD and qualified with U/L flags/reason codes.
Were target analytes in the field blank less than MDL?		•		Equipment blank had a detection below the LOQ that was qualified as non-detect at the LOQ based on method blank detection noted above.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?		•		See below - soluble and insoluble MS analyzed as required by method instead of MS/MSD.
Were MS/MSD recoveries within project acceptance limits?		•		Sample -007 soluble and insoluble MS recoveries were biased low and below the lower reject criteria so sample -007 field result was qualified rejected with X/M flags/reason codes.
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?		•		Field duplicate/parent field sample combination RPD was outside project criteria for samples -012/-013 so these sample results were qualified estimated with J/UJ/D3 flags/reason codes. Field sample/field duplicate combinations are sample -002/-003, -005/-006, -012/-013. The field duplicate RPD summary table includes other combinations that were not used to qualify results.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?	•			Sample -007 hexavalent chromium results based on MS recovery low bias.

Review Questions

Method: SW8260 (Volatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Samples -012 and -014 recoveries were biased high for 1 of 4 surrogates. All associated results were non-detect so did not require qualification based on this high bias QC outlier. Sample -013 surrogates were biased high for 1 surrogate and biased low for 1 surrogate. Client sample -013 results were all qualified as estimated with UJ/I flags/reason codes.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG287174-2 had a detection below the LOQ for methylene chloride. Qualifications were not required based on this method blank detection.
Were target analytes in the field blank less than MDL?		•		Equipment blank had detections for benzene, toluene and methylene chloride. Trip blank had a detection below the LOQ for methylene chloride. Aqueous equipment and trip blank detections were not used to qualify soil field sample results.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG286777 recoveries were biased low for MTBE and biased high for 4-methyl-2-pentanone. MTBE results for client samples -016, -017, -018 were qualified estimated with UJ/C flags/reason codes.
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			Field sample/field duplicate combinations are sample -002/-003, -005/-006, -012/-013. Other combinations that are present in the FUDSChem datatbase have been deleted from the field duplicate summary table in this report.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		Internal standard outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data rejected during the verification process?		•		

Review Questions

Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Sample -016 surrogates were outliers biased low below the reject criteria for 3 of 3 acid fraction surrogates. Sample -016 acid fraction results were qualified as rejected with X/I flags. Base-neutral fraction analyte flags were removed from the database since all base-neutral surrogate recoveries were acceptable. QC batch WG286713 method blank (2 of 3 acid surrogates below lower reject criteria) and LCS (3 of 3 acid surrogates rejected) and QC batch WG286714 LCS surrogate outliers were not used to qualify field results.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG286713 method blank had a detection below the LOQ for bis-2-ethylhexylphthalate. Qualifications were not applied based on this method blank.
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG286713 recoveries were biased high for benzaldehyde and biased low and below the reject criteria for several acid fraction analytes. Sample -016 acid fraction results were qualified as rejected with X/C flags/reason codes as noted in the associated 8270D QC outlier LCS outlier table. QC batch WG287057 recoveries were outliers biased high for benzaldehyde and biased low for caprolactam. Client samples -011, -012, -013, -014, -015 caprolactam results were qualified estimated with UJ/L flags/reason codes. QC batch WG287179 recoveries were biased high for benzaldehyde. Qualifications were not required based on this high bias outlier.
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•

NHFLA-SL29-A-SEP2020	SN7851-1	Solid	Field Sample/N	X	X	X		X		X	X	X	X
NHFLA-EB18-SEP2020	SN7851-2	Water	Equipment Blank/EB	X			X	X	X		X	X	
NHFLA-TB21-SEP2020	SN7851-3	Water	Trip Blank/TB								X		

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN7851. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 90 results (26.71%) out of the 337 results (sample and field QC samples) reported are qualified based on review and 15 results (4.45%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Hydrazine field sample results and QC are included in this SDG but electronic data is in separate SDG (15140-1). Please reference validation report 15140-1 for data qualification summary.

Jim Tomalia

January 27, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method LYDKHN, Prep Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of extraction found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-SL29-A-SEP2020 (N)/ SN7851-1		5.810	< 0	< 0	days	J/X	H2	Prep Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6010, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBSNI22ICS1 (LB)/ PBSNI22ICS1	Nickel	0.05800	< 0.044	< 1	mg/kg	U/None	L	
PBSNI22ICS1 (LB)/ PBSNI22ICS1	Chromium	0.09600	< 0.026	< 1	mg/kg	U/None	L	
PBSNI22ICS1 (LB)/ PBSNI22ICS1	Magnesium	1.100	< 0.68	< 10	mg/kg	U/None	L	
PBSNI22ICS1 (LB)/ PBSNI22ICS1	Aluminum	1.800	< 0.71	< 30	mg/kg	U/None	L	
PBSNI22ICS1 (LB)/ PBSNI22ICS1	Calcium	2.000	< 1.8	< 10	mg/kg	U/None	L	
PBSNI22ICS1 (LB)/ PBSNI22ICS1	Sodium	2.400	< 1.5	< 100	mg/kg	U/None	L	
PBSNI22ICS1 (LB)/ PBSNI22ICS1	Iron	2.500	< 1.4	< 10	mg/kg	U/None	L	
PBSNI22ICS1 (LB)/ PBSNI22ICS1	Potassium	7.700	< 2.9	< 100	mg/kg	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6010, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-SL29-A-SEP2020 (SD)/ SN7851-001P	Aluminum	-705.9	74 - 119	30 - 125	percent	J/X	M	Spike amount Insignificant

Quality Control Outliers for test method SW6010, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-SL29-A-SEP2020 (MS)/ SN7851-001S	Iron	-111.1	81 - 118	30 - 125	percent	J/X	M	Spike amount Insignificant
NHFLA-SL29-A-SEP2020 (MS)/ SN7851-001S	Calcium	2773	81 - 116	30 - 125	percent	J/None	M	Spike amount Insignificant

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW6010

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-SL29-A-SEP2020	N	Arsenic	0.700	7.97 N	7.97 J	+	mg/kg	M
NHFLA-SL29-A-SEP2020	N	Copper	2.20	30.1 N	30.1 J	+	mg/kg	M
NHFLA-SL29-A-SEP2020	N	Potassium	87.0	2100 N*	2100 J	-	mg/kg	M/D

NHFLA-SL29-A-SEP2020	N	Lead	0.440	27.5 N	27.5 J	+	mg/kg	M
NHFLA-SL29-A-SEP2020	N	Nickel	0.870	29.9 N	29.9 J	-	mg/kg	M
NHFLA-SL29-A-SEP2020	N	Thallium	1.30	0.440 UN*	0.440 UJ		mg/kg	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6010, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-SL29-A-SEP2020 (SD)/ SN7851-001P	Potassium	22.95	< 20	< 20	rpd	J/UJ	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS RPD for SW6010

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-SL29-A-SEP2020	N	Potassium	87.0	2100 N*	2100 J	-	mg/kg	M/D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG287377-1 (BS)/ WG287377-1	Methylene chloride	69.00	74 - 124	10 - 124	percent	J/UJ	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB18-SEP2020	EB	Methylene chloride	5.00	2.50 UL	2.50 UJ		ug/l	C/I
NHFLA-TB21-SEP2020	TB	Methylene chloride	5.00	2.50 UL	2.50 UJ		ug/l	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB18-SEP2020 (EB)/ SN7851-2	1-Bromo-4-fluorobenzene (4-Bromofluorobenzene)	84.10	85 - 114	10 - 114	percent	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-SL29-A-SEP2020 (N)/ SN7851-1	Dibromofluoromethane	123.0	78 - 119	10 - 119	percent	J/None	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB18-SEP2020 (EB)/ SN7851-2	Diethyl phthalate	3.000	< 1.9	< 9.6	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG286713-1 (LB)/ WG286713-1	Bis(2-ethylhexyl)phthalate	2.700	< 1.7	< 10	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?	•			QC batch WG286764-2 LCS had 1 of 3 surrogates biased high. Qualifications were not required based on this QC surrogate recovery outlier.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICV and CCV outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data rejected during the verification process?		•		

Review Questions

Method: LYDKHN (Lloyd Kahn Method for the Determination of Total Organic Carbon in Sediment, USEPA Region II Method)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			Hold time flags H2 were removed for soil sample since it was analyzed with project criteria 6 days versus 14 days required.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?			•	
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•		

Review Questions

Method: SW6010 (Trace Metals by Inductively Coupled Plasma/Atomic Emission Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch NI22ICS1 had detections below the LOQ for aluminum, calcium, chromium, iron, magnesium, nickel, potassium, sodium. No qualifications were required based on these method blank detections.
Were target analytes in the field blank less than MDL?		•		See method 6020 narrative. Water equipment blank detections were not used to qualify soil results.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 recoveries were biased low for antimony (below reject limit), potassium, nickel and thallium and biased high for arsenic, copper and lead. Spikes were below significant levels (4X rule) for aluminum, calcium, iron, magnesium, manganese so were not used to qualify field results. Sample -001 results for antimony were qualified as rejected with X/M flag/reason code. Sample -001 results for potassium, nickel, arsenic, copper and lead were qualified estimated with J/M flags/reason codes. Sample -001 thallium result was qualified estimated with UJ/M.
Was the MS/MSD RPD within project acceptance limits?		•		Sample -001 MS/MSD RPD outliers for potassium and thallium. Sample -001 potassium result qualified as estimated with J/D flag/reason code. Thallium was non-detect so did not require flag for RPD outlier.
Were the post spike recoveries within project acceptance limits?		•		Calcium and Magnesium PDS recoveries were outliers for sample -001 but were not used to qualify results based on 4X rule criteria.
Were the serial dilution RPD values within project acceptance limits?		•		Calcium was SD outlier for sample -001.
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?	•			Sample -001 antimony results due to MS low bias below reject criteria.

Review Questions

Method: SW8260 (Volatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Sample -001 had 1 of 4 surrogates biased high - qualification not required since all associated sample results were non-detect. Sample -002 had 1 of 4 surrogates biased low - All sample results qualified UJ/I flag/reason code with exception of toluene detection which was qualified J/I.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		WG287174 detection for methylene chloride. Qualification not required.
Were target analytes in the field blank less than MDL?		•		Equipment blank toluene only.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG287377 low bias for methylene chloride. Field samples -002 and -003 results for this analyte qualified UJ/C flag/reason code as estimated.
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Sample -002 had 3 of 3 acid fraction surrogates biased low below reject criteria so all acid fraction results were qualified rejected with X/I flag/reason codes. NOTE: base-neutral flags were removed from data base. Acid fraction surrogates were also outliers biased low for at least 2 of 3 surrogates in the QC batch blank and LCS.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG286713-1 detection for bis-2-ethylhexylphthalate. Qualification not required.
Were target analytes in the field blank less than MDL?		•		Equipment blank had diethylphthalate detections.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS Only
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG286713-2 high bias for benzaldehyde and low bias for multiple acid fraction analytes. All associated sample results already qualified as estimated due to surrogate recovery outliers but C reason code added where appropriate. QC batch WG286719 had a high bias for benzaldehyde. Qualifications not required based on this high bias.
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICAL and CCV outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data rejected during the verification process?	•			Sample -002 acid fraction analytes due to surrogate and LCS recovery outliers.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN8027. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 193 results (25.06%) out of the 770 results (sample and field QC samples) reported are qualified based on review and 35 results (4.55%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
A2340B	No additional comments; see Checklist for detail.
BNASIM	No additional comments; see Checklist for detail.
SW6020	NOTE: Discrepancies were noticed in MS/MSD recovery percentages between the database and lab report. Recoveries were manually recalculated based on lab report raw values and these results recalculated correctly so were used to qualify/not qualify field data. QC outlier tables in report may not reconcile with narrative or qualifications of field data. Clarification - samples -001, -003, -005, -007 are total metals and samples -002, -004, -006, -008 are dissolved with sample -011 being filter blank which is considered a QC sample and was not qualified.
SW7196	No additional comments; see Checklist for detail.
SW7470	No additional comments; see Checklist for detail.
SW8260	No additional comments; see Checklist for detail.
SW8270	No additional comments; see Checklist for detail.

Jim Tomalia

February 11, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS6-SEP2020 (MS)/ WG287052-5	Benzo (g,h,i)perylene	32.62	44 - 128	10 - 128	percent	J/UJ	M	
NHFLA-MS6-SEP2020 (MS)/ WG287052-5	Dibenz (a,h)anthracene	32.62	44 - 131	10 - 131	percent	J/UJ	M	
NHFLA-MS6-SEP2020 (MS)/ WG287052-5	Indeno(1,2,3-c,d)pyrene	34.22	48 - 130	10 - 130	percent	J/UJ	M	
NHFLA-MS6-SEP2020 (MS)/ WG287052-5	Benzo (k)fluoranthene	36.36	54 - 125	10 - 125	percent	J/UJ	M	
NHFLA-MS6-SEP2020 (MS)/ WG287052-5	Benzo(a)pyrene	40.11	53 - 120	10 - 120	percent	J/UJ	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method BNASIM, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS6-SEP2020 (SD)/ WG287052-6	Anthracene	0.2200	< 0.19	< 0.19	ug/l	J/UJ	D	
NHFLA-MS6-SEP2020 (SD)/ WG287052-6	Acenaphthylene	0.3600	< 0.19	< 0.19	ug/l	J/UJ	D

In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Dissolved, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

Quality Control Outliers for test method SW6020, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBWNI28IMW3 (LB)/ PBWNI28IMW3	Beryllium	0.07100	< 0.034	< 1	ug/l	U/None	L	
PBWNI28IMW3 (LB)/ PBWNI28IMW3	Cadmium	0.09000	< 0.03	< 1	ug/l	U/None	L	
PBWNI28IMW3 (LB)/ PBWNI28IMW3	Antimony	0.1100	< 0.054	< 1	ug/l	U/None	L	
PBWNI28IMW3 (LB)/ PBWNI28IMW3	Lead	0.1200	< 0.074	< 1	ug/l	U/None	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

Qualified Results associated with the MS Recovery for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW5OB-SEP2020	N	m,p-Xylene	2.00	7.50 M	7.50 J	+	ug/l	M/I

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS6-SEP2020 (SD)/ WG287676-7	Bromomethane	20.51	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS7-SEP2020 (SD)/ WG287676-9	Bromomethane	21.57	< 20	< 20	rpd	J/UJ	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS RPD for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW2-SEP2020	N	Bromomethane	2.00	1.00 U	1.00 UJ		ug/l	D
NHFLA-MW5OB-SEP2020	N	Bromomethane	2.00	1.00 U	1.00 UJ		ug/l	D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP11-SEP2020 (FD)/ SN8027-5	1,2-Dichloroethane-d4	122.0	81 - 118	10 - 118	percent	J/None	I

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

Quality Control Outliers for test method SW8270, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Notes:
Shaded cells identify any compounds that were outside the acceptable MS/MSD recovery limit.
Bold = Bolded result indicates positively identified compounds in the parent sample

µg/L = micrograms per liter
%R = percent recovery
ID = Identification
MS = Matrix Spike
MSD = Matrix Spike Duplicate
NA = Not Applicable
RPD = Relative Percent Difference
U = Compound was not detected and was reported at the limit of quantitation (LOQ).
VOC = volatile organic compound

UJ = The analyte was analyzed for, but was not detected. The reported LOQ is approximate.
J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

Notes:
Shaded cells identify any compounds that were outside the acceptable MS/MSD recovery limit.
Bold = Bolded result indicates positively identified compounds in the parent sample

µg/L = micrograms per liter
%R = percent recovery
ID = Identification
MS = Matrix Spike
MSD = Matrix Spike Duplicate
NA = Not Applicable
RPD = Relative Percent Difference
U = Compound was not detected and was reported at the limit of quantitation (LOQ).
VOC = volatile organic compound

UJ = The analyte was analyzed for, but was not detected. The reported LOQ is approximate.
J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

Automated Data Review Detail Report for SN8027
C02NY0079-02, Nike BU 51/52, Launch Area
Nike BU 51/52 Quality Assurance Project Plan

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
A2340B/METHOD/NONE	4	4

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
A2340B/METHOD/NONE	NHFLA-DUP11-SEP2020	FD	5	Hardness (as CaCO3)	676000	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-EB19-SEP2020	EB	5	Hardness (as CaCO3)	300 J	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW2-SEP2020	N	5	Hardness (as CaCO3)	561000	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW5OB-SEP2020	N	5	Hardness (as CaCO3)	444000	85.0	530	650	5	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D	MS RPD
D3	Field Duplicate RPD
I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: A2340B

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?			•	no batch QC for hardness
Were target analytes in the method blank less than MDL?			•	
Were target analytes in the field blank less than MDL?		•		equipment blank detection below LOQ
Was an LCS/LCSD pair prepared and analyzed with each batch?			•	
Were LCS/LCSD recoveries within project acceptance limits?			•	
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		MSD for sample -003 1 of 3 surrogates biased high. Qualifications not assigned based on this QC outlier alone.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			equipment blank and trip blank.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -003 MS/MSD had 8 RPD's outside of criteria and 8 analytes with both MS/MSD recoveries biased low and 3 with one or the other MS/MSD recoveries biased low. Flags also apply to field duplicate sample -005. See GCMS SVOC-SIM MS recovery outlier table for details
Was the MS/MSD RPD within project acceptance limits?		•		Sample -003 MS/MSD had 8 RPD's outside of criteria. See QC outlier table for details.
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		Calibration outliers as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch NI28IMW2 method blank had detections above the LOQ for barium, manganese, iron and below the LOQ for aluminum, antimony, beryllium, cadmium, calcium, chromium, cobalt, copper, lead, magnesium, nickel, potassium, sodium, thallium, vanadium, selenium. Client sample -003 results for the following were qualified with U/L flags/reason codes - aluminum, antimony, beryllium, cadmium, chromium, cobalt, copper, lead, selenium, thallium, vanadium. QC batch NI28IMW3 had detections below the LOQ for aluminum, antimony, barium, beryllium, cadmium, chromium, cobalt, copper, lead, magnesium, manganese, sodium, thallium, vanadium. Sample -004 results were qualified with U/L flags/reason codes for aluminum, antimony, beryllium, cadmium, cobalt, lead (zinc qualifiers removed). Sample -008 was qualified U/L for aluminum, barium, beryllium chromium, copper, lead, magnesium, sodium (flags removed for nickel and potassium). Sample -006 was qualified U/L for aluminum, antimony, beryllium, cadmium, cobalt, copper, lead (flag removed for zinc). Sample -005 was qualified U/L for antimony, beryllium, cadmium, cobalt, chromium, copper, thallium, vanadium (flag removed for lead). Sample -007 was qualified U/L for aluminum, barium, chromium copper, magnesium, manganese. QC batch NI25IMW1 had detections below the LOQ for aluminum, antimony, calcium, copper, iron, magnesium. Sample -001 was qualified with U/L flags/reason codes for antimony and copper. QC batch NI05IMW3 had a detection below the LOQ for iron. Samples in this batch were not reported as final results so qualification was not required based on this method blank detection.
Were target analytes in the field blank less than MDL?		•		Equipment blank and filter blank had multiple detections. All associated field blank detections have already been qualified as required based on method blank detections.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•

Review Questions

Method: SW6020

Review Questions	Yes	No	NA	Comment
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 MS/MSD recoveries were biased low for selenium. This sample result was qualified with UJ/M flags/reason codes. Calcium and sodlium recoveries were not used based on 4x rule. Sample -002 MS and/or MSD recoveries were biased high for lead and thallium so these results were qualified J/M flags/reason codes. Calcium and Sodium recoveries were not used to qualify results based on 4X rule (flags for iron and magnesium removed). SAMPLE -003 MS recoveries for calcium, sodium, iron were not used to qualify results based on 4X rule criteria. SAMPLE -004 MS recoveries for calcium, iron, magnesium, sodium were not used to qualify results based on 4X rule criteria (flags removed for manganese and potassium).
Was the MS/MSD RPD within project acceptance limits?		•		See QC outlier table for details.
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?		•		Sample -003 (parent) and -005 (field duplicate) results were qualified estimated with J/D3 flags/reason codes for aluminum.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•

Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -003 MS/MSD recoveries biased high for chloroethane. Qualifications not required. Sample -001 MS/MSD recoveries biased high for chloroethane and MS or MSD recovery but not both biased high for p&m-xylenes and MS/MSD RPD outlier only for bromomethane. Client sample -001 bromomethane results qualified with D reason code and p&m-xylenes result qualified J/M flag/reason code.
Was the MS/MSD RPD within project acceptance limits?		•		Sample -001 and -003 MS/MSD RPD outlier only for bromomethane so both qualified with D reason codes.
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•		

Automated Data Review Detail Report for SN8027
C02NY0079-02, Nike BU 51/52, Launch Area
Nike BU 51/52 Quality Assurance Project Plan

Review Questions

Method: SW8270

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Surrogate recovery outliers (low bias) associated with QC samples only.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG287051-2 had multiple recovery outliers with several resulting in R flags for field data (samples -001, -003, -005, -007). See QC summary table for details on recovery outliers and flagged samples (C reason codes). NOTE: batch was re-extracted out of hold time (12 days) with benzaldehyde recovery outlier biased high only.
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 MS/MSD recoveries had 19 analytes outside of criteria biased low and sample -003 had only caprolactam biased low. All associated sample results were qualified J or UJ/M flags/reason codes.
Was the MS/MSD RPD within project acceptance limits?		•		Most of the MS/MSD recovery outlier analytes also had RPD results outside of criteria so were flagged accordingly.
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		Calibration outliers as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?	•			See rejection summary for details.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN8059. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 150 results (9.35%) out of the 1605 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

NOTE: VOC hold time (H1) qualifiers are being applied by FUDSCHEM if analysis is being done on 14th day of a 14 day holding time. We recommend that these qualifiers be removed from the database.

Analytical Method	Data Reviewer Comment
A2340B	No additional comments; see Checklist for detail.
BNASIM	No additional comments; see Checklist for detail.
SW6020	No additional comments; see Checklist for detail.
SW7196	No additional comments; see Checklist for detail.
SW7470	No additional comments; see Checklist for detail.
SW8260	NOTE: VOC hold time (H1) qualifiers are being applied by FUDSCHEM if analysis is being done on 14th day of a 14 day holding time. We recommend that these qualifiers be removed from the database.
SW8270	No additional comments; see Checklist for detail.

Jim Tomalia

February 11, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method SW6020, Dissolved, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB20-SEP2020 (EB)/ SN8059-18	Barium	0.3400	< 0.27	< 2	ug/l	U/None	V	
NHFLA-EB20-SEP2020 (EB)/ SN8059-18	Manganese	0.5900	< 0.35	< 2	ug/l	U/None	V	
NHFLA-EB20-SEP2020 (EB)/ SN8059-18	Sodium	120.0	< 19	< 1000	ug/l	U/None	V	
NHFLA-EB20-SEP2020 (EB)/ SN8059-18	Magnesium	13.00	< 8	< 100	ug/l	U/None	V	
NHFLA-EB20-SEP2020 (EB)/ SN8059-18	Calcium	32.00	< 21	< 100	ug/l	U/None	V	
NHFLA-EB20-SEP2020 (EB)/ SN8059-18	Iron	40.00	< 13	< 100	ug/l	U/None	V	
NHFLA-EB20-SEP2020 (EB)/ SN8059-18	Aluminum	9.100	< 4.4	< 100	ug/l	U/None	V	
NHFLA-EB20-SEP2020 (EB)/ SN8059-18	Copper	2.280	< 0.19	< 3	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for SW6020, Dissolved

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP12-SEP2020	FD	Aluminum	100	12.0 J	40.0 U		ug/l	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Equipment Blank

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW16-SEP2020 (MS)/ WG287088-3	Chromium, Hexavalent	79.38	90 - 111	30 - 125	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW16-SEP2020	N	Chromium, Hexavalent	0.0250	0.00310 J	0.0125 UJ		mg/l	L/M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7470, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB20-SEP2020 (EB)/ SN8059-17	Mercury	0.01300	< 0.013	< 0.2	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for SW7470

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP12-SEP2020	FD	Mercury	0.200	0.0530 J	0.100 U		ug/l	V
NHFLA-MW10-SEP2020	N	Mercury	0.200	0.0130 J	0.100 U		ug/l	V
NHFLA-MW12-SEP2020	N	Mercury	0.200	0.0270 J	0.100 U		ug/l	V
NHFLA-MW13-SEP2020	N	Mercury	0.200	0.0420 J	0.100 U		ug/l	V
NHFLA-MW16-SEP2020	N	Mercury	0.200	0.0550 J	0.100 U		ug/l	V
NHFLA-MW3-SEP2020	N	Mercury	0.200	0.0460 J	0.100 U		ug/l	V
NHFLA-MW6-SEP2020	N	Mercury	0.200	0.0590 J	0.100 U		ug/l	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7470, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
PBWNI30HGW3 (LB)/ PBWNI30HGW3	Mercury	0.05400	< 0.013	< 0.2	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7470

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP12-SEP2020	FD	Mercury	0.200	0.0510 J	0.100 U		ug/l	V/L
NHFLA-MW12-SEP2020	N	Mercury	0.200	0.0530 J	0.100 U		ug/l	V/L
NHFLA-MW13-SEP2020	N	Mercury	0.200	0.0510 J	0.100 U		ug/l	V/L
NHFLA-MW16-SEP2020	N	Mercury	0.200	0.0410 J	0.100 U		ug/l	V/L
NHFLA-MW3-SEP2020	N	Mercury	0.200	0.0640 J	0.100 U		ug/l	V/L
NHFLA-MW6-SEP2020	N	Mercury	0.200	0.0280 J	0.100 U		ug/l	V/L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB20-SEP2020 (EB)/ SN8059-17	Carbon disulfide	0.2600	< 0.25	< 1	ug/l	U/None	V	
NHFLA-EB20-SEP2020 (EB)/ SN8059-17	Benzene	0.3000	< 0.26	< 1	ug/l	U/None	V	
NHFLA-EB20-SEP2020 (EB)/ SN8059-17	Toluene	1.000	< 0.27	< 1	ug/l	U/None	V	
NHFLA-EB20-SEP2020 (EB)/ SN8059-17	Acetone	3.000	< 2.2	< 5	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP12-SEP2020	FD	Acetone	5.00	3.80 J	5.00 UJ		ug/l	V
NHFLA-DUP12-SEP2020	FD	Toluene	1.00	0.390 J	0.500 UJ		ug/l	V
NHFLA-MW12-SEP2020	N	Acetone	5.00	2.90 J	5.00 U		ug/l	V
NHFLA-MW12-SEP2020	N	Carbon disulfide	1.00	0.350 J	0.500 U		ug/l	V/L/T
NHFLA-MW13-SEP2020	N	Acetone	5.00	3.00 J	5.00 U		ug/l	V
NHFLA-MW14-SEP2020	N	Acetone	5.00	4.30 J	5.00 U		ug/l	V
NHFLA-MW14-SEP2020	N	Toluene	1.00	0.410 J	0.500 U		ug/l	V
NHFLA-MW16-SEP2020	N	Acetone	5.00	11.0	11.0 J		ug/l	V
NHFLA-MW6-SEP2020	N	Acetone	5.00	4.90 J	5.00 U		ug/l	V
NHFLA-MW6-SEP2020	N	Benzene	1.00	0.300 J	0.500 U		ug/l	V
NHFLA-MW6-SEP2020	N	Carbon disulfide	1.00	0.260 J	0.500 U		ug/l	V/L/T
NHFLA-MW6-SEP2020	N	Toluene	1.00	0.280 J	0.500 U		ug/l	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG287832-10 (LB)/ WG287832-10	Carbon disulfide	0.3400	< 0.25	< 1	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB20-SEP2020	EB	Carbon disulfide	1.00	0.260 J	0.500 UJ		ug/l	L
NHFLA-MW12-SEP2020	N	Carbon disulfide	1.00	0.350 J	0.500 U		ug/l	V/L/T
NHFLA-MW6-SEP2020	N	Carbon disulfide	1.00	0.260 J	0.500 U		ug/l	V/L/T
NHFLA-TB25-SEP2020	TB	Carbon disulfide	1.00	0.280 J	0.500 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-TB24-SEP2020 (TB)/ SN8059-19	1,2-Dichloroethane-d4	127.0	81 - 118	10 - 118	percent	J/None	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP12-SEP2020 (FD)/ SN8059-11		14.26	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-EB20-SEP2020 (EB)/ SN8059-17		14.08	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW10-SEP2020 (N)/ SN8059-15		14.19	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW12-SEP2020 (N)/ SN8059-5		14.19	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW13-SEP2020 (N)/ SN8059-9		14.18	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW14-SEP2020 (N)/ SN8059-13		14.18	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW16-SEP2020 (N)/ SN8059-1		14.37	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW3-SEP2020 (N)/ SN8059-3		14.22	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW6-SEP2020 (N)/ SN8059-7		14.16	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, Trip Blank

The purpose of trip blanks is to determine the existence and magnitude of cross-contamination problems resulting from the shipping of samples. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in trip blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-TB25-SEP2020 (TB)/ SN8059-20	Carbon disulfide	0.2800	< 0.25	< 1	ug/l	U/None	T	
NHFLA-TB25-SEP2020 (TB)/ SN8059-20	Methylene chloride	1.200	< 1.1	< 5	ug/l	U/None	T	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Trip Blank for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW12-SEP2020	N	Carbon disulfide	1.00	0.350 J	0.500 U		ug/l	V/L/T
NHFLA-MW6-SEP2020	N	Carbon disulfide	1.00	0.260 J	0.500 U		ug/l	V/L/T

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB20-SEP2020 (EB)/ SN8059-17	Caprolactam	0.9900	< 0.37	< 9.3	ug/l	U/None	V	
NHFLA-EB20-SEP2020 (EB)/ SN8059-17	Diethyl phthalate	5.900	< 1.9	< 9.3	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG287179-2RA (BS)/ WG287179-2RA	Benzaldehyde	1458	10 - 189	10 - 189	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW6-SEP2020 (N)/ SN8059-7	Terphenyl-d14	41.60	50 - 134	10 - 134	percent	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Surrogate for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW6-SEP2020	N	1,2,4,5-Tetrachlorobenzene	9.50	7.10 U	7.10 UJ		ug/l	I

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Automated Data Review Detail Report for SN8059
C02NY0079-02, Nike BU 51/52, Launch Area
Nike BU 51/52 Quality Assurance Project Plan

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
A2340B/METHOD/NONE	9	9

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
A2340B/METHOD/NONE	NHFLA-DUP12-SEP2020	FD	5	Hardness (as CaCO3)	460000	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-EB20-SEP2020	EB	5	Hardness (as CaCO3)	180 J	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW10-SEP2020	N	5	Hardness (as CaCO3)	295000	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW12-SEP2020	N	5	Hardness (as CaCO3)	266000	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW13-SEP2020	N	5	Hardness (as CaCO3)	135000	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW14-SEP2020	N	5	Hardness (as CaCO3)	467000	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW16-SEP2020	N	5	Hardness (as CaCO3)	1630000	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW3-SEP2020	N	5	Hardness (as CaCO3)	994000	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW6-SEP2020	N	5	Hardness (as CaCO3)	274000	85.0	530	650	5	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
H1	Test Hold Time
I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
T	Trip Blank
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: A2340B (Hardness by Calculation)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?			•	
Were target analytes in the method blank less than MDL?			•	
Were target analytes in the field blank less than MDL?		•		equipment blank had detection of 180J.
Was an LCS/LCSD pair prepared and analyzed with each batch?		•		
Were LCS/LCSD recoveries within project acceptance limits?		•		
Was the LCS/LCSD RPD within project acceptance limits?		•		
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?		•		
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data recommended for rejection (exclusion) in the data validation process?		•

If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICV outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW6020 (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch NI29IMW1 prep blank had detections below the LOQ for antimony, beryllium, copper, lead, manganese. The following metals/samples combinations were qualified non-detect at the LOD with U/L flags/reason codes - antimony - all results except equipment blank, beryllium samples -003, -004, -005, -007, -008, -009, -011, -013, copper - sample -015, lead - samples -001, -003, -009, -011, -013, -015.
Were target analytes in the field blank less than MDL?		•		Filter blank from SDG SN8027 (PER COC) and equipment blank detections were used to qualify multiple results (filter blank - aluminum, chromium, copper, lead, nickel, zinc and equipment blank - aluminum, barium, calcium, copper, iron, magnesium, manganese, sodium) as noted in the summary tables and flagged U/V at the LOD with the following exceptions (filter blank used for dissolved metals only). Qualified as non-detect at the LOQ for NICKEL in samples -012, -014 and ZINC in samples -002, -012. Qualified as estimated at concentration detected and flagged JV+ for COPPER in samples -002, -006 and zinc in samples -004, -006 and -010. Several equipment blank detections also required J/V/+ qualifiers for multiple metals as noted in the equipment blank outlier tables.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?		•		
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?	•			
Were the serial dilution RPD values within project acceptance limits?	•			
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			CCB outlier was re-analyzed and passed DoD criteria.
Were DoD QSM corrective actions followed if deviations were noted?	•

Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW7196 (Chromium, Hexavalent (Colorimetric))				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG287088 had detection below LOQ. Samples -001, -007, -009, -011, -013, -015 were qualified U/L flags/reason codes as non-detect at the LOD.
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		MS recovery was outlier biased low for sample -001. Sample results were qualified estimated with UJ/M flag/reason code.
Was the MS/MSD RPD within project acceptance limits?	•			
Were the post spike recoveries within project acceptance limits?			•	PDS data not included
Were the serial dilution RPD values within project acceptance limits?			•	Serial dilution data not included.
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary

Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			ICV outliers were re-analyzed and acceptable per DoD criteria.
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW8260 (Volatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			See holding time comment above.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Sample -019 had one of four surrogates outside of project criteria biased high. All associated results were non-detect so qualification was not required.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG287832 detection for carbon disulfide. The following sample results for this analyte were qualified non-detect at the LOD with U/L flag/reason codes: -005, -007, -017, -020.
Were target analytes in the field blank less than MDL?		•		Equipment blank had detections below LOQ for carbon disulfide, acetone, benzene and at LOQ for toluene. Trip blank (1 of 2) had detections below LOQ for carbon disulfide and methylene chloride. Qualifications were made as noted in the equipment blank outlier table for SW8260.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?		•		
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		CCV outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Sample -007 surrogates were biased low for 1 of 3 base-neutral fraction surrogates so all base-neutral fraction target analytes were qualified estimated with J/UJ flags in client sample -007.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?		•		Detections for caprolactam and diethylphthalate did not require qualification for field sample results.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG287179 had high bias for benzaldehyde. Qualification was not required based on this high bias recovery.
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?		•		
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICAL, ICV and CCV outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?		•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN8108. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 151 results (13.68%) out of the 1104 results (sample and field QC samples) reported are qualified based on review and 6 results (0.54%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

NOTE: Sample MW-14 was not received as noted on COC. Container for hexavalent chromium for sample MW11 was not received.

February 11, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG287251-1 (LB)/ WG287251-1	Chrysene	0.04800	< 0.036	< 0.2	ug/l	U/None	L	
WG287251-1 (LB)/ WG287251-1	Pyrene	0.07100	< 0.059	< 0.2	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW15-SEP2020	N	Chrysene	0.190	0.0470 J	0.0930 U		ug/l	L
NHFLA-MW15-SEP2020	N	Pyrene	0.190	0.0550 J	0.0930 U		ug/l	L
NHFLA-MW8-SEP2020	N	Chrysene	0.190	0.0370 J	0.0930 U		ug/l	L
NHFLA-MW9BR-SEP2020	N	Chrysene	0.200	0.0400 J	0.0980 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method BNASIM, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW11-SEP2020 (N)/ SN8108-11	2-Methylnaphthalene-d10	42.80	43 - 92	10 - 92	percent	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Surrogate for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB21-SEP2020 (EB)/ SN8108-5	Chromium, Hexavalent	0.006500	< 0.00076	< 0.025	mg/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW7196, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG287432-1 (LB)/ WG287432-1	Chromium, Hexavalent	0.003600	< 0.00076	< 0.025	mg/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB21-SEP2020	EB	Chromium, Hexavalent	0.0250	0.00650 J	0.0125 X		mg/l	L/H1

NHFLA-MW9OB-SEP2020	N	Chromium, Hexavalent	0.0250	0.00840 J	0.0125 X		mg/l	L/H1

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW8-SEP2020 (MS)/ WG287432-4	Chromium, Hexavalent	2.100	90 - 111	30 - 125	percent	J/X	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW8-SEP2020	N	Chromium, Hexavalent	0.0250	0.00750 J	0.0125 X		mg/l	L/H1/M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB21-SEP2020 (EB)/ SN8108-5		68.90	< 24	< 48	hours	J/X	H1	Test Exceeds UCL
NHFLA-MW11-SEP2020 (N)/ SN8108-11		66.18	< 24	< 48	hours	J/X	H1	Test Exceeds UCL
NHFLA-MW15-SEP2020 (N)/ SN8108-3		69.32	< 24	< 48	hours	J/X	H1	Test Exceeds UCL
NHFLA-MW8-SEP2020 (N)/ SN8108-1		69.57	< 24	< 48	hours	J/X	H1	Test Exceeds UCL
NHFLA-MW8-SEP2020 (N)/ WG287432-4		69.57	< 24	< 48	hours	J/X	H1	Test Exceeds UCL
NHFLA-MW9BR-SEP2020 (N)/ SN8108-13		66.73	< 24	< 48	hours	J/X	H1	Test Exceeds UCL
NHFLA-MW9OB-SEP2020 (N)/ SN8108-7		68.48	< 24	< 48	hours	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Test Hold Time for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB21-SEP2020	EB	Chromium, Hexavalent	0.0250	0.00650 J	0.0125 X		mg/l	L/H1
NHFLA-MW11-SEP2020	N	Chromium, Hexavalent	0.0250	0.00880 J	0.0125 X		mg/l	L/H1
NHFLA-MW15-SEP2020	N	Chromium, Hexavalent	0.0250	0.00780 J	0.0125 X		mg/l	L/H1
NHFLA-MW8-SEP2020	N	Chromium, Hexavalent	0.0250	0.00750 J	0.0125 X		mg/l	L/H1/M
NHFLA-MW9BR-SEP2020	N	Chromium, Hexavalent	0.0250	0.0100 J	0.0125 X		mg/l	L/H1
NHFLA-MW9OB-SEP2020	N	Chromium, Hexavalent	0.0250	0.00840 J	0.0125 X		mg/l	L/H1

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB21-SEP2020 (EB)/ SN8108-5	Toluene	0.5200	< 0.27	< 1	ug/l	U/None	V	
NHFLA-EB21-SEP2020 (EB)/ SN8108-5	Methylene chloride	1.300	< 1.1	< 5	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG288040-10 (LB)/ WG288040-10	Carbon disulfide	0.3200	< 0.25	< 1	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW11-SEP2020 (N)/ SN8108-11	1,2-Dichloroethane-d4	119.0	81 - 118	10 - 118	percent	J/None	I	
NHFLA-MW8-SEP2020 (N)/ SN8108-1	Toluene-d8	121.0	89 - 112	10 - 112	percent	J/None	I	
NHFLA-MW9BR-SEP2020 (N)/ SN8108-13	1,2-Dichloroethane-d4	122.0	81 - 118	10 - 118	percent	J/None	I	
NHFLA-MW9OB-SEP2020 (N)/ SN8108-7	1,2-Dichloroethane-d4	129.0	81 - 118	10 - 118	percent	J/None	I	
NHFLA-TB26-SEP2020 (TB)/ SN8108-15	1-Bromo-4-fluorobenzene (4-Bromofluorobenzene)	116.0	85 - 114	10 - 114	percent	J/None	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Surrogate for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason

NHFLA-MW9OB-SEP2020 (N)/ SN8108-7		14.18	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB21-SEP2020 (EB)/ SN8108-5	Bis(2-ethylhexyl) phthalate	3.100	< 1.6	< 9.4	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG287250-2 (BS)/ WG287250-2	Benzaldehyde	1024	10 - 189	10 - 189	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB21-SEP2020 (EB)/ SN8108-5	2,4,6-Tribromophenol	34.20	43 - 140	10 - 140	percent	J/UJ	I	
NHFLA-MW8-SEP2020 (N)/ SN8108-1	Terphenyl-d14	36.80	50 - 134	10 - 134	percent	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

A2340B/METHOD/NONE	NHFLA-MW8-SEP2020	N	5	Hardness (as CaCO3)	96200	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW9BR-SEP2020	N	5	Hardness (as CaCO3)	367000	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW9OB-SEP2020	N	5	Hardness (as CaCO3)	287000	85.0	530	650	5	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
H1	Test Hold Time
I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch PBWNI30IMW2 - detections above LOQ - barium and below LOQ - aluminum, antimony, beryllium, cadmium, calcium, chromium, cobalt, copper, lead, magnesium, nickel, thallium. U/L flag/reason codes assigned as noted in method blank qualifier summary table for samples -007, -008, -011, -013, -014. Flags edited in database for samples as follows: sample -008 - aluminum, chromium, thallium, sample -012 - antimony, beryllium, thallium, sample -014 - chromium, cobalt.QC batch NJ12IMW2 - detection below LOQ - barium - no qualifications required.QC batch NI30IMW1 - detections below LOQ - aluminum, antimony, beryllium, cadmium calcium, cobalt, copper, lead, magnesium thallium. U/L flags/reason codes assigned based on these method blank detections as noted in method blank qualifier summary table. Flags in database edited for sample results as follows: Sample -002 - barium, cobalt, copper, lead, sample -004 - aluminum, antimony, cobalt, copper, thallium, sample -006 - aluminum, antimony, calcium, copper, lead. NOTE: Filter blank sample -018 treated as QC sample and not qualified based on method blank detections.
Were target analytes in the field blank less than MDL?		•		Lab blank (filter blank) sample -018 detections (aluminum, barium, calcium, copper, lead, magnesium, manganese, sodium) were associated with dissolved metals field result qualifications that are already flagged due to method blank detections noted above. Qualified results table for lab blank also represents these method blank qualified results.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?		•		NOTE sample MW11 hexavalent chromium test specific container missing at login.
Were holding times met?		•		All sample testing performed in 3 days which was outside of holding time reject criteria so all hexavalent chromium results were qualified as unusable with X/H1 flags/reason codes.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG287432 blank detection below LOQ. All samples qualified as non-detect at LOQ with L reason codes (results qualified X flags also as noted above).
Were target analytes in the field blank less than MDL?		•		Equipment blank detection below LOQ.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 MS biased low at 2%. MS re-analyzed at 5X dilution with recovery of 61% and still biased low (according to lab submittal case narrative - no re-analysis data available in database or in QC summary section of report). Sample -001 result already qualified rejected due to HTQ outlier so M reason code added only.
Was the MS/MSD RPD within project acceptance limits?			•	MS only.
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?	•			All hexavalent chromium results were qualified as unusable with X flags.

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?		•		Initial analysis all within holding time. Re-analysis of samples -011, -013 due to surrogate recovery outliers were performed outside of holding time but re-analysis data was not used as final data so was not flagged in database.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		One of four surrogate recoveries biased high for samples -001, -007, -011, -013, -015 so all detections in these samples were qualified with J/I flags/reason codes. Non-detect results did not require qualification.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG288040 detection below LOQ for carbon disulfide did not result in qualifications for field sample data.
Were target analytes in the field blank less than MDL?		•		Detections in equipment blank below LOQ.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only.
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN8174. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Lab Blank
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 250 results (25.30%) out of the 988 results (sample and field QC samples) reported are qualified based on review and 30 results (3.04%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Jim Tomalia

February 11, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB22-SEP2020 (EB)/ SN8174-7	2-Methylnaphthalene	0.1000	< 0.072	< 0.19	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW4OB-SEP2020	N	2-Methylnaphthalene	0.190	0.200	0.200 J	+	ug/l	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method BNASIM, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS8-SEP2020 (SD)/ WG287485-4	Benzo (g,h,i)perylene	20.69	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS8-SEP2020 (SD)/ WG287485-4	Phenanthrene	20.69	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS8-SEP2020 (SD)/ WG287485-4	Benzo(a)pyrene	22.22	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS8-SEP2020 (SD)/ WG287485-4	Dibenz (a,h)anthracene	22.22	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS8-SEP2020 (SD)/ WG287485-4	2-Methylnaphthalene	22.22	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS8-SEP2020 (SD)/ WG287485-4	Naphthalene	22.22	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS8-SEP2020 (SD)/ WG287485-4	Indeno(1,2,3-c,d)pyrene	28.57	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS8-SEP2020 (SD)/ WG287485-4	Fluoranthene	30.30	< 20	< 20	rpd	J/UJ	D	
NHFLA-MS8-SEP2020 (SD)/ WG287485-4	Anthracene	34.48	< 20	< 20	rpd	J/UJ	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS RPD for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW7OB-SEP2020	N	2-Methylnaphthalene	0.190	0.0930 U	0.0930 UJ		ug/l	D
NHFLA-MW7OB-SEP2020	N	Anthracene	0.190	0.0930 U	0.0930 UJ		ug/l	D
NHFLA-MW7OB-SEP2020	N	Benzo(a)pyrene	0.190	0.0930 U	0.0930 UJ		ug/l	D
NHFLA-MW7OB-SEP2020	N	Benzo(g,h,i)perylene	0.190	0.0930 U	0.0930 UJ		ug/l	D
NHFLA-MW7OB-SEP2020	N	Dibenz(a,h)anthracene	0.190	0.0930 U	0.0930 UJ		ug/l	D

NHFLA-MW7OB-SEP2020	N	Phenanthrene	0.190	0.0930 U	0.0930 UJ		ug/l	D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method BNASIM, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW4BR-SEP2020 (N)/ SN8174-3	Pyrene-d10	48.30	53 - 166	10 - 166	percent	J/UJ	I	
NHFLA-MW5BR-SEP2020 (N)/ SN8174-5	Fluorene-d10	16.60	29 - 101	10 - 101	percent	J/UJ	I	
NHFLA-MW5BR-SEP2020 (N)/ SN8174-5	Pyrene-d10	18.30	53 - 166	10 - 166	percent	J/UJ	I	
NHFLA-MW5BR-SEP2020 (N)/ SN8174-5	2-Methylnaphthalene-d10	27.20	43 - 92	10 - 92	percent	J/UJ	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Dissolved, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MSD8-SEP2020 (SD)/ SN8174-010P	Sodium	68.97	85 - 117	30 - 125	percent	J/UJ	M	Spike amount Insignificant

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6020, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB22-SEP2020 (EB)/ SN8174-7	Chromium	0.5800	< 0.22	< 5	ug/l	U/None	V

In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS8-SEP2020 (SD)/ SN8174-009P	Vanadium	34.26	< 20	< 20	rpd	J/UJ	D

NHFLA-MW7OB-SEP2020	N	Methyl acetate	1.00	0.750 UM	0.750 UJ		ug/l	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB22-SEP2020 (EB)/ SN8174-7	Benzaldehyde	4.700	< 0.93	< 9.3	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG287484-2 (BS)/ WG287484-2	Benzaldehyde	1348	10 - 189	10 - 189	percent	J/None	C	
WG288184-2 (BS)/ WG288184-2	Benzaldehyde	1074	10 - 189	10 - 189	percent	J/None	C	
WG288184-2 (BS)/ WG288184-2	2,2'-Oxybis(1-chloropropane)	35.20	37 - 130	10 - 130	percent	J/UJ	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB22-SEP2020	EB	Benzaldehyde	9.30	4.70 JL	4.70 J	+	ug/l	C/TR

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS8-SEP2020 (MS)/ WG287484-3	Benzaldehyde	1049	10 - 189	10 - 189	percent	J/None	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW4BR-SEP2020 (N)/ SN8174-3	Terphenyl-d14	49.60	50 - 134	10 - 134	percent	J/UJ	I	
NHFLA-MW4OB-SEP2020 (N)/ SN8174-1	2-Fluorophenol	0.000	19 - 119	10 - 119	percent	J/X	I	
NHFLA-MW4OB-SEP2020 (N)/ SN8174-1	2,4,6-Tribromophenol	0.000	43 - 140	10 - 140	percent	J/X	I

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Table of Results with Modified Qualifiers

Modified Qualifiers for test method SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	ADR Result	Modified Result	Reason
NHFLA-MW7OB-SEP2020	N	N-Nitrosodiphenylamine	9.30	7.00 U	7.00 X	7.00 U	

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D	MS RPD
I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: A2340B (Hardness by Calculation)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?		•		equipment blank 220J mg/l hardness
Was an LCS/LCSD pair prepared and analyzed with each batch?			•	
Were LCS/LCSD recoveries within project acceptance limits?			•	
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•		

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Surrogates biased low for 3 of 3 in sample -005 and biased low for 1 of 3 in sample -003. All results for these samples were qualified estimated with UJ flags if non-detect and J flags if detected with I reason codes. NOTE sample -009 MS surrogates were biased high for 1 of 3 surrogates which did not require qualification.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?		•		Equipment blank had a detection for 2-methylnaphthalene. Sample -001 result for this analyte qualified as estimated with J/V flag/reason code.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?		•		Sample -009 MS/MSD RPD's were outliers for multiple analytes. All associated analytes were qualified with D reason codes and flagged as estimated if detected above LOQ.
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICV outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data rejected during the verification process?		•		

Review Questions

Method: SW6020 (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		Multiple prep blanks in addition to the field blanks noted below were used to qualify field results. Prep blanks for QC batch NJ14IMW1, NJ01MW2 associated with samples -001 and -002 and NJ01MW3 associated with samples -03 through -014. Field blanks include filter blank for dissolved metals results and equipment blanks for total and dissolved results. Field results that were qualified based on prep blanks include L reason codes and are noted in QC outlier summary tables.
Were target analytes in the field blank less than MDL?		•		Field blanks had multiple detections for filter blank as well as dissolved and total equipment blanks. Field results associated with field blank flags include V reason codes as noted in QC summary tables. NOTE filter blank and equipment blank detections were treated as QC sample results for this water field sample batch so were not qualified based on prep blank detections noted above.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only.
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -009 MS recoveries were outliers biased high for calcium, vanadium and zinc. Sample -009 calcium result was qualified J/M based on the MS high bias outlier. Vanadium and Zinc results were non-detect so did not require qualification. Samples -009 and -010 sodium MS recoveries were subject to the 4X rule so were not used for qualification.
Was the MS/MSD RPD within project acceptance limits?		•		Sample -009 MS/MSD RPD's were outliers for zinc and vanadium. Associated field results were no-detect so were not flagged based on these RPD outliers but were qualified with D reason codes.
Were the post spike recoveries within project acceptance limits?		•		Sodium PDS was an outlier but was not used to qualify results based on 4X rule criteria,
Were the serial dilution RPD values within project acceptance limits?	•			
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG288040 blank had detections below the LOQ for carbon disulfide. Field samples -003 and -005 were qualified as non-detect at the LOD or LOQ as required with U/L flags/reason codes for this analyte.
Were target analytes in the field blank less than MDL?		•		Equipment blank had detections below the LOQ for acetone and at the LOD for toluene. The 10X common lab contaminant rule was used for acetone. Samples -001, -003 and -009 acetone results and samples -001 and -003 toluene results were qualified as non-detect at the LOQ (adjusted where necessary for acetone) with U/V flags/reason codes. NOTE: equipment blank was treated as a QC sample for this water field sample batch so was not qualified based on prep blank detections noted above. Trip blanks (3) were all non-detect for all target analytes.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -009 MS recoveries were biased high for dichlorodifluoromethane, vinyl chloride, bromomethane, chloroethane, trichlorofluoromethane and biased low for methyl acetate. Field sample -009 was qualified as estimated with UJ/M flags/reason codes for methyl acetate only.
Was the MS/MSD RPD within project acceptance limits?	•			
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Samples -001 and -009 had 3 of 3 acid fraction surrogates biased low and below reject criteria. Acid fraction analyte field results in these samples were qualified as rejected with X/I flags/reason codes. Sample -003 surrogates were biased low for 1 of 3 base-neutral fraction surrogate so associated base-neutral fraction only field results were qualified estimated with UJ/I flag/reason codes. Sample -005 had 2 of 3 base-neutral and 1 of 3 acid fraction surrogates biased low so all sample -005 results were qualified estimated with UJ or J flags and I reason codes.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?		•		Equipment blank had a detection for benzaldehyde. Field samples -004 and -007 results for this analyte were qualified as non-detect at LOD with U/V flags/reason codes.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG287484 had a high bias for benzaldehyde and QC batch WG288184 (sample rerun batch) had a high bias for benzaldehyde and low bias for 2,2-oxybis(1-chloropropane). Qualifications were not required based on the LCS outliers for this batch since they were all associated with re-analysis data which was not reported as final data.
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -009 MS/MSD had multiple recovery outliers biased low and benzaldehyde recovery biased high. All associated sample -009 field results were qualified estimated with UJ or J flags and M reason codes.
Was the MS/MSD RPD within project acceptance limits?		•		Sample -009 MS/MSD RPD's were outliers for multiple analytes. Associated sample -009 field results were qualified with D reason codes.
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICAL, CCV and ICV outlier issues noted in case narrative were not addressed as part of this stage 2A validation review.
Were DoD QSM corrective actions followed if deviations were noted?		•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Westbrook, ME and were reported under sample delivery group (SDG) SN8209. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 95 results (10.14%) out of the 937 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
A2340B	No additional comments; see Checklist for detail.
BNASIM	No additional comments; see Checklist for detail.
SW6020	NOTE: The database included flags/qualifications based on using the field filter blank to qualify TOTAL METALS results as well as dissolved metals results. These flags were removed from total metals results where applicable. Also flags had to be edited so dissolved metals equipment blank and total metals equipment blank were only used to qualify total/dissolved field results as applicable.
SW7196	No additional comments; see Checklist for detail.
SW7470	No additional comments; see Checklist for detail.
SW8260	No additional comments; see Checklist for detail.
SW8270	No additional comments; see Checklist for detail.

Jim Tomalia

February 11, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB23-SEP2020 (EB)/ SN8209-9	2-Methylnaphthalene	0.1000	< 0.072	< 0.19	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP13-SEP2020	FD	2-Methylnaphthalene	0.200	0.120 J	0.200 U		ug/l	V
NHFLA-MW1BR-SEP2020	N	2-Methylnaphthalene	0.190	0.430	0.430 J	+	ug/l	V
NHFLA-MW1OB-SEP2020	N	2-Methylnaphthalene	0.190	0.250	0.250 J	+	ug/l	V
NHFLA-MW7BR-SEP2020	N	2-Methylnaphthalene	0.190	0.130 J	0.190 U		ug/l	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Dissolved, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB23-SEP2020 (EB)/ SN8209-10	Cadmium	0.04700	< 0.029	< 1	ug/l	U/None	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Dissolved, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW7BR-SEP2020 (N)/ SN8209-8	Aluminum	166.0	< 100	< 100	ug/l	J/UJ	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Field Duplicate RPD for SW6020, Dissolved

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP13-SEP2020	FD	Aluminum	100	71.0 J	100 UJ		ug/l	V/L/D3
NHFLA-MW7BR-SEP2020	N	Aluminum	100	237	237 J	+	ug/l	V/D3

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Dissolved, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW6020

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW1OB-SEP2020	N	Aluminum	100	106 NA	106 J	+	ug/l	V/M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB23-SEP2020 (EB)/ SN8209-9	Chromium, Hexavalent	0.006500	< 0.00076	< 0.025	mg/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP13-SEP2020	FD	Chromium, Hexavalent	0.0250	0.00880 J	0.0125 UJ		mg/l	V/L/H1
NHFLA-MW1BR-SEP2020	N	Chromium, Hexavalent	0.0250	0.00590 J	0.0125 U		mg/l	V/L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP13-SEP2020 (FD)/ SN8209-7		46.03	< 24	< 48	hours	J/UJ	H1	Test Exceeds UWL
NHFLA-EB23-SEP2020 (EB)/ SN8209-9		45.03	< 24	< 48	hours	J/UJ	H1	Test Exceeds UWL
NHFLA-EB23-SEP2020 (EB)/ WG287522-4		45.03	< 24	< 48	hours	J/UJ	H1	Test Exceeds UWL
NHFLA-MW7BR-SEP2020 (N)/ SN8209-5		45.95	< 24	< 48	hours	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Test Hold Time for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP13-SEP2020	FD	Chromium, Hexavalent	0.0250	0.00880 J	0.0125 UJ		mg/l	V/L/H1

In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB23-SEP2020 (EB)/ SN8209-9	Toluene	0.9500	< 0.27	< 1	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP13-SEP2020	FD	Toluene	1.00	1.00	1.00 U		ug/l	V/T
NHFLA-MW1BR-SEP2020	N	Toluene	1.00	0.460 J	0.500 U		ug/l	V/T
NHFLA-MW1OB-SEP2020	N	Toluene	1.00	0.410 J	0.500 U		ug/l	V/T
NHFLA-MW7BR-SEP2020	N	Toluene	1.00	0.980 J	1.00 U		ug/l	V/T

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Trip Blank

The purpose of trip blanks is to determine the existence and magnitude of cross-contamination problems resulting from the shipping of samples. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in trip blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-TB31-SEP2020 (TB)/ SN8209-11	Toluene	0.7100	< 0.27	< 1	ug/l	U/None	T	
NHFLA-TB32-SEP2020 (TB)/ SN8209-12	Toluene	0.7700	< 0.27	< 1	ug/l	U/None	T	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Trip Blank for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP13-SEP2020	FD	Toluene	1.00	1.00	1.00 U		ug/l	V/T
NHFLA-MW1BR-SEP2020	N	Toluene	1.00	0.460 J	0.500 U		ug/l	V/T

NHFLA-MW7BR-SEP2020	N	Toluene	1.00	0.980 J	1.00 U		ug/l	V/T

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG287620-2 (BS)/ WG287620-2	Benzaldehyde	322.0	10 - 189	10 - 189	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
A2340B/METHOD/NONE	5	5

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
A2340B/METHOD/NONE	NHFLA-DUP13-SEP2020	FD	5	Hardness (as CaCO3)	24400	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-EB23-SEP2020	EB	5	Hardness (as CaCO3)	530 U	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW1BR-SEP2020	N	5	Hardness (as CaCO3)	724000	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW1OB-SEP2020	N	5	Hardness (as CaCO3)	492000	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW7BR-SEP2020	N	5	Hardness (as CaCO3)	24000	85.0	530	650	5	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D3	Field Duplicate RPD
H1	Test Hold Time
L	Lab Blank
M	MS Recovery
T	Trip Blank
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		Prep blanks for QC batch NJ12IMW1 had detections below the LOQ for aluminum, barium, calcium, cadmium, cobalt, copper, iron, magnesium, sodium, beryllium, vanadium. QC batch NJ12IMW2 prep blank had detections below the LOQ for aluminum, barium, copper, iron, magnesium, manganese. Qualified results as non-detect at either the LOD or LOQ included U/L flags in addition to flags required based on field blanks noted below.
Were target analytes in the field blank less than MDL?		•		See method blank narration above for additional flagging. Dissolved metals equipment blank had detections below the LOQ for antimony, barium, beryllium, cadmium, chromium, cobalt, copper, iron, lead, magnesium, manganese, sodium, thallium and above the LOQ for aluminum, calcium, and zinc. Total metals equipment blank had detections below the LOQ for aluminum, barium, chromium, copper, iron, magnesium, manganese, sodium and above the LOQ for zinc. Results that were considered estimated at the concentration reported with J/V/+flags based on filter or equipment blanks - aluminum samples -006, -001, -005, -007, Zinc samples -002, -004, -001. Non-detect at the concentration reported with J/V/+ flags for iron in sample -010. Filter blanks samples had detections below LOQ for barium, calcium, chromium, copper, lead, magnesium, manganese, nickel, sodium, zinc for sample -013 and -014 had detections below the LOQ for aluminum, barium, cadmium, chromium, copper, cobalt, iron, magnesium, sodium and sample -013 above the LOQ for barium and iron. Filter blanks were only used to qualify dissolved metals results and two filter blanks were reported (note: some metals were reported above LOQ in one blank and below in the other). See QC outlier summary tables for method blanks for details. Associated results were qualified non-detect at the LOD or LOQ with U/V flags.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•

Review Questions

Method: SW6020

Review Questions	Yes	No	NA	Comment
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 MSD only was outlier biased high for aluminum. Sample -001 aluminum results were qualified with J/M flag/reason code. Calcium, iron, sodium and magnesium recoveries were not used to qualify results due to 4X exclusion.
Was the MS/MSD RPD within project acceptance limits?	•			
Were the post spike recoveries within project acceptance limits?		•		Outliers for aluminum and zinc with 4X exclusions for barium, calcium, iron, magnesium and manganese.
Were the serial dilution RPD values within project acceptance limits?	•			
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?		•		Samples -006 and -008 RPD for aluminum was outside project criteria. Sample -006 was detected above the LOQ so was qualified J/D3 and sample -008 was qualified as non-detect at LOD based on prep and equipment blank detections so was qualified UJ/D3. D3 qualification was made based on -006 result above LOQ and -008 reporting limit value RPD being greater than project criteria.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Scarborough, ME and were reported under sample delivery group (SDG) TN0289. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 141 results (11.56%) out of the 1220 results (sample and field QC samples) reported are qualified based on review and 73 results (5.98%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Jim Tomalia

March 03, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG292266-1 (LB)/ WG292266-1	Chrysene	0.04100	< 0.036	< 0.2	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW11-DEC2020	N	Chrysene	0.190	0.0830 J	0.0940 U		ug/l	L
NHFLA-MW3-DEC2020	N	Chrysene	0.190	0.0380 J	0.0940 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Dissolved, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB23-DEC2020 (EB)/ TN0289-15	Chromium	0.2600	< 0.22	< 5	ug/l	U/None	V	
NHFLA-EB23-DEC2020 (EB)/ TN0289-15	Copper	0.5000	< 0.19	< 3	ug/l	U/None	V

Qualified Results associated with the Equipment Blank for SW6020, Dissolved

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW3-DEC2020	N	Chromium	5.00	0.770 J	4.00 U		ug/l	V
NHFLA-MW3-DEC2020	N	Copper	3.00	1.80 J	2.00 U		ug/l	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB23-DEC2020 (EB)/ TN0289-7	Toluene	0.6000	< 0.27	< 1	ug/l	U/None	V	
NHFLA-EB23-DEC2020 (EB)/ TN0289-7	Acetone	8.800	< 2.2	< 5	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW16-DEC2020	N	Acetone	5.00	11.0	11.0 J	+	ug/l	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW10-DEC2020 (N)/ TN0289-3	1,2-Dichloroethane-d4	119.0	81 - 118	10 - 118	percent	J/None	I	
NHFLA-MW11-DEC2020 (N)/ TN0289-6	1,2-Dichloroethane-d4	119.0	81 - 118	10 - 118	percent	J/None	I	
NHFLA-MW2-DEC2020 (N)/ TN0289-4	1,2-Dichloroethane-d4	120.0	81 - 118	10 - 118	percent	J/None	I	
NHFLA-MW3-DEC2020 (N)/ TN0289-5	1,2-Dichloroethane-d4	120.0	81 - 118	10 - 118	percent	J/None	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW2-DEC2020 (N)/ TN0289-4		14.00	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, Trip Blank

The purpose of trip blanks is to determine the existence and magnitude of cross-contamination problems resulting from the shipping of samples. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in trip blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-TB32-DEC2020 (TB)/ TN0289-8	Carbon disulfide	0.2500	< 0.25	< 1	ug/l	U/None	T	
NHFLA-TB32-DEC2020 (TB)/ TN0289-8	Methylene chloride	1.500	< 1.1	< 5	ug/l	U/None	T	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG292265-2 (BS)/ WG292265-2	4-Nitrophenol	0.000	10 - 114	10 - 114	percent	J/X	C	
WG292265-2 (BS)/ WG292265-2	2,4-Dinitrophenol	0.000	12 - 143	10 - 143	percent	J/X	C	
WG292265-2 (BS)/ WG292265-2	Pentachlorophenol	0.000	35 - 138	10 - 138	percent	J/X	C	
WG292265-2 (BS)/ WG292265-2	4,6-Dinitro-2-methylphenol	0.000	44 - 137	10 - 137	percent	J/X	C	
WG292265-2 (BS)/ WG292265-2	2,3,4,6-Tetrachlorophenol	0.000	50 - 128	10 - 128	percent	J/X	C	
WG292265-2 (BS)/ WG292265-2	2-Nitrophenol	15.70	47 - 123	10 - 123	percent	J/UJ	C	
WG292265-2 (BS)/ WG292265-2	2,4-Dichlorophenol	17.50	47 - 121	10 - 121	percent	J/UJ	C	
WG292265-2 (BS)/ WG292265-2	2-Chlorophenol	20.00	38 - 117	10 - 117	percent	J/UJ	C	
WG292265-2 (BS)/ WG292265-2	2,4,6-Trichlorophenol	4.750	50 - 125	10 - 125	percent	J/X	C	
WG292265-2 (BS)/ WG292265-2	Benzaldehyde	6760	10 - 189	10 - 189	percent	J/None	C	
WG292265-2 (BS)/ WG292265-2	2,4,5-Trichlorophenol	8.480	53 - 123	10 - 123	percent	J/X	C	
WG292478-2 (BS)/ WG292478-2	Benzaldehyde	5020	10 - 189	10 - 189	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the LCS Recovery for SW8270

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB23-DEC2020	EB	2,3,4,6-Tetrachlorophenol	9.30	7.00 UL	7.00 X		ug/l	C/I

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB23-DEC2020 (EB)/ TN0289-7	2,4,6-Tribromophenol	0.000	43 - 140	10 - 140	percent	J/X	I	
NHFLA-EB23-DEC2020 (EB)/ TN0289-7	2-Fluorophenol	1.790	19 - 119	10 - 119	percent	J/X	I	
NHFLA-EB23-DEC2020 (EB)/ TN0289-7	Phenol-d6	3.140	10 - 90	10 - 90	percent	J/X	I	
NHFLA-MW12-DEC2020 (N)/ TN0289-2	2,4,6-Tribromophenol	3.160	43 - 140	10 - 140	percent	J/X	I	
NHFLA-MW12-DEC2020 (N)/ TN0289-2	2-Fluorophenol	3.800	19 - 119	10 - 119	percent	J/X	I	
NHFLA-MW12-DEC2020 (N)/ TN0289-2	Phenol-d6	8.140	10 - 90	10 - 90	percent	J/X	I	
NHFLA-MW16-DEC2020 (N)/ TN0289-1	Phenol-d6	0.000	10 - 90	10 - 90	percent	J/X	I	
NHFLA-MW16-DEC2020 (N)/ TN0289-1	2-Fluorophenol	0.000	19 - 119	10 - 119	percent	J/X	I	
NHFLA-MW16-DEC2020 (N)/ TN0289-1	2,4,6-Tribromophenol	0.000	43 - 140	10 - 140	percent	J/X	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Table of Results with Modified Qualifiers

Modified Qualifiers for test method SW6020

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
H1	Test Hold Time
I	Surrogate recovery outside project limits.
L	Lab Blank
T	Trip Blank
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: A2340B (Hardness by Calculation)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?			•	
Were target analytes in the method blank less than MDL?			•	
Were target analytes in the field blank less than MDL?		•		Equipment blank detection below LOD did not result in qualification for field sample data.
Was an LCS/LCSD pair prepared and analyzed with each batch?			•	
Were LCS/LCSD recoveries within project acceptance limits?			•	
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		QC batch LCS WG292266-2 had 1 of 3 surrogates biased high. Qualification of field results not required based on this high bias QC sample outlier.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch method blank WG292266-1 had a detection below LOD for CHRYSENE. Samples -005 and -006 were qualified as non-detect at LOD with U/L flags/reason codes.
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?		•		
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICV outliers as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW6020 (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch prep blank PBWNL18IMW2 had detections below the LOD for aluminum, copper, magnesium, manganese and barium. The following field sample results were qualified non-detect at LOD with U/L flags reason codes: ALUMINUM - samples -001, -003, -004, -007. COPPER - samples -001, -002, -003, -004, -007. MAGNESIUM and MANGANESE - sample -007.
Were target analytes in the field blank less than MDL?		•		Equipment blanks had detections below the LOD for TOTAL and DISSOLVED metals - ALUMINUM, CALCIUM, CHROMIUM, COPPER, MAGNESIUM, MANGANESE, MERCURY, POTASSIUM and SODIUM and dissolved metals only for NICKEL and ZINC. See equipment blank detection qualification summary table for field sample results qualified non-detect at LOD with U/V flag/reason code based on appropriate equipment blank. The following results were qualified estimated with J/V flags reason codes based on equipment blank detections: DISSOLVED NICKEL - samples -010, -011. NOTE: Flags were removed for total nickel and total zinc since the total metals equipment blank did not have detections for these metals.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?			•	Spiked sample was not from this SDG so recovery data was not available.
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?	•			
Were the serial dilution RPD values within project acceptance limits?	•			
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•

Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		Prep blanks PBWNL18HGW4 and PBWNL29HGW1 had detections below the LOD. All field sample results qualified as non-detect at the LOD with U/L flags/reason codes.
Were target analytes in the field blank less than MDL?		•		Dissolved and Total metals equipment blanks had detections below the LOD. All field sample results were qualified non-detect at the LOD with U/V flags/reason codes.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?	•			
Were the post spike recoveries within project acceptance limits?	•			
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW8260 (Volatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			Sample -004 was analyzed on the 14th day so H1 qualifier flags and reason codes were removed for these sample results.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		One of 4 surrogates was biased high for samples -003, -004, -005, -006. All associated sample results were non-detect so qualification was not required based on this high bias matrix QC outlier.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?		•		Equipment blank had detections above the LOQ for acetone and below the LOD for toluene. Client sample -001 acetone results were qualified as estimated with J/V/+ flags/reason codes. Trip blank had detections below the LOD for carbon disulfide and methylene chloride. Qualification was not required based on these trip blank detections.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			Spike samples were not from this SDG so recovery data was not available.
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICV and calibration outliers as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?		•		Samples -001RE, -002RE and -007RE were re-extracted outside of project criteria holding times. All associated results should be considered estimated. Re-analysis data for these samples was not available in the database so qualifications were not applied based on these hold time outliers.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Acid fraction surrogates were biased low outside of rejection criteria for samples -001, -002, -007 so all acid fraction results for these samples were qualified as unusable with X/I flags/reason codes. NOTE: QC batch WG292265 method blank and LCS also had at least 2 acid fraction surrogate outliers biased low below rejection criteria.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG292265 LCS recoveries were biased low or non-detect for 10 acid fraction analytes (all acid fraction analytes except phenol, methyphenols, 2,4-dimethylphenol and 4 -chloro-3-methylphenol). All field sample acid fraction results for these analytes were qualified with either X/C or UJ/C flags/reason codes. QC batch WG292265 and WG292478 LCS high bias recovery outliers for benzaldehyde did not require qualification of client sample non-detect results.
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			Samples spiked were not from this SDG so recovery data was not available.
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICAL, ICV and CCV outliers as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?	•			All ACID FRACTION analyte results for samples -001, -002 and -007 based on surrogate recovery outliers. Multiple acid fraction analyte results for samples -003, -004, -005, -006 based on LCS recovery outliers.

Data Validation Report for TN0328
REVISION 1 - Revision date 2021-04-01
REVISION SUMMARY: Checklist narration updated for LOD/LOQ clarification and Hexchrome control limit criteria reference.

Facility:	C02NY0079-02, Nike BU 51/52, Launch Area
Event:	Nike BU 51/52 - Hamburg NY - December Groundwater Sampling
SDG:	TN0328
Guidance Document:	Nike BU 51/52 Quality Assurance Project Plan
Prime Contractor:	Seres-Arcadis JV
Project Manager:	Jennifer Singer
Contract Laboratory(ies):	Katahdin Analytical Services, Scarborough, ME
Data Review Contractor:	CADENA LLC
Data Review Level:	S2AVEM
Primary Data Reviewer:	Jim Tomalia, Senior Environmental Compliance Specialist
Date Submitted:	March 29, 2021 revised report April 1, 2021

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Scarborough, ME and were reported under sample delivery group (SDG) TN0328. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 176 results (14.43%) out of the 1220 results (sample and field QC samples) reported are qualified based on review and 101 results (8.28%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB24-DEC2020 (EB)/ TN0328-7	Chrysene	0.04100	< 0.035	< 0.19	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW14-DEC2020	N	Chrysene	0.190	0.0360 J	0.0970 U		ug/l	V
NHFLA-MW-1OB-DEC2020	N	Chrysene	0.200	0.0370 J	0.100 U		ug/l	V
NHFLA-MW4BR-DEC2020	N	Chrysene	0.210	0.120 J	0.210 U		ug/l	V
NHFLA-MW-5OB-DEC2020	N	Chrysene	0.190	0.0420 J	0.0940 U		ug/l	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Dissolved, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB24-DEC2020 (EB)/ TN0328-15	Chromium	0.2500	< 0.22	< 5	ug/l	U/None	V	
NHFLA-EB24-DEC2020 (EB)/ TN0328-15	Barium	0.4000	< 0.27	< 2	ug/l	U/None	V	
NHFLA-EB24-DEC2020 (EB)/ TN0328-15	Copper	0.6600	< 0.19	< 3	ug/l	U/None	V	
NHFLA-EB24-DEC2020 (EB)/ TN0328-15	Aluminum	15.00	< 4.4	< 100	ug/l	U/None	V	
NHFLA-EB24-DEC2020 (EB)/ TN0328-15	Magnesium	17.00	< 8	< 100	ug/l	U/None	V	
NHFLA-EB24-DEC2020 (EB)/ TN0328-15	Calcium	39.00	< 21	< 100	ug/l	U/None	V	
NHFLA-EB24-DEC2020 (EB)/ TN0328-15	Sodium	564.0	< 19	< 1000	ug/l	U/None	V	
NHFLA-EB24-DEC2020 (EB)/ TN0328-15	Potassium	69.00	< 31	< 1000	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for SW6020, Dissolved

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW14-DEC2020	N	Aluminum	100	19.0 J	40.0 U		ug/l	V

Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB24-DEC2020 (EB)/ TN0328-7	Chromium, Hexavalent	0.001500	< 0.00076	< 0.025	mg/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW14-DEC2020	N	Chromium, Hexavalent	0.0250	0.00400 J	0.0125 UJ		mg/l	V/L/H1
NHFLA-MW-1BR-DEC2020	N	Chromium, Hexavalent	0.0250	0.00290 J	0.0125 U		mg/l	V/L
NHFLA-MW-1OB-DEC2020	N	Chromium, Hexavalent	0.0250	0.0170 J	0.0250 U		mg/l	V/L
NHFLA-MW4BR-DEC2020	N	Chromium, Hexavalent	0.0250	0.00270 J	0.0125 U		mg/l	V/L
NHFLA-MW4OB-DEC2020	N	Chromium, Hexavalent	0.0250	0.00510 J	0.0125 U		mg/l	V/L
NHFLA-MW-5OB-DEC2020	N	Chromium, Hexavalent	0.0250	0.00240 J	0.0125 UJ		mg/l	V/L/H1

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG292118-1 (LB)/ WG292118-1	Chromium, Hexavalent	0.005600	< 0.00076	< 0.025	mg/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB24-DEC2020	EB	Chromium, Hexavalent	0.0250	0.00150 J	0.0125 UJ		mg/l	L/M
NHFLA-MW14-DEC2020	N	Chromium, Hexavalent	0.0250	0.00400 J	0.0125 UJ		mg/l	V/L/H1
NHFLA-MW-1BR-DEC2020	N	Chromium, Hexavalent	0.0250	0.00290 J	0.0125 U		mg/l	V/L
NHFLA-MW-1OB-DEC2020	N	Chromium, Hexavalent	0.0250	0.0170 J	0.0250 U		mg/l	V/L
NHFLA-MW4BR-DEC2020	N	Chromium, Hexavalent	0.0250	0.00270 J	0.0125 U		mg/l	V/L
NHFLA-MW4OB-DEC2020	N	Chromium, Hexavalent	0.0250	0.00510 J	0.0125 U		mg/l	V/L
NHFLA-MW-5OB-DEC2020	N	Chromium, Hexavalent	0.0250	0.00240 J	0.0125 UJ		mg/l	V/L/H1

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB24-DEC2020 (MS)/ WG292118-4	Chromium, Hexavalent	85.70	90 - 111	30 - 125	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB24-DEC2020	EB	Chromium, Hexavalent	0.0250	0.00150 J	0.0125 UJ		mg/l	L/M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW14-DEC2020 (N)/ TN0328-4		24.23	< 24	< 48	hours	J/UJ	H1	Test Exceeds UWL
NHFLA-MW-5OB-DEC2020 (N)/ TN0328-1		24.03	< 24	< 48	hours	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Test Hold Time for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW14-DEC2020	N	Chromium, Hexavalent	0.0250	0.00400 J	0.0125 UJ		mg/l	V/L/H1
NHFLA-MW-5OB-DEC2020	N	Chromium, Hexavalent	0.0250	0.00240 J	0.0125 UJ		mg/l	V/L/H1

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7470, Dissolved, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB24-DEC2020 (EB)/ TN0328-15	Mercury	0.1540	< 0.013	< 0.2	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for SW7470, Dissolved

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW14-DEC2020	N	Mercury	0.200	0.161 J	0.200 U		ug/l	V
NHFLA-MW-1BR-DEC2020	N	Mercury	0.200	0.145 J	0.200 U		ug/l	V
NHFLA-MW-1OB-DEC2020	N	Mercury	0.200	0.146 J	0.200 U		ug/l	V
NHFLA-MW4BR-DEC2020	N	Mercury	0.200	0.166 J	0.200 U		ug/l	V
NHFLA-MW4OB-DEC2020	N	Mercury	0.200	0.200	0.200 U		ug/l	V
NHFLA-MW-5OB-DEC2020	N	Mercury	0.200	0.145 J	0.200 U		ug/l	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7470, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB24-DEC2020 (EB)/ TN0328-7	Mercury	0.1750	< 0.013	< 0.2	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for SW7470

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW14-DEC2020	N	Mercury	0.200	0.161 J	0.200 U		ug/l	V
NHFLA-MW-1BR-DEC2020	N	Mercury	0.200	0.145 J	0.200 U		ug/l	V
NHFLA-MW-1OB-DEC2020	N	Mercury	0.200	0.146 J	0.200 U		ug/l	V
NHFLA-MW4BR-DEC2020	N	Mercury	0.200	0.166 J	0.200 U		ug/l	V
NHFLA-MW4OB-DEC2020	N	Mercury	0.200	0.200	0.200 U		ug/l	V
NHFLA-MW-5OB-DEC2020	N	Mercury	0.200	0.145 J	0.200 U		ug/l	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB24-DEC2020 (EB)/ TN0328-7	Toluene	0.4600	< 0.27	< 1	ug/l	U/None	V	
NHFLA-EB24-DEC2020 (EB)/ TN0328-7	Acetone	4.200	< 2.2	< 5	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW4BR-DEC2020	N	Acetone	5.00	12.0	12.0 J	+	ug/l	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW14-DEC2020 (N)/ TN0328-4	1,2-Dichloroethane-d4	120.0	81 - 118	10 - 118	percent	J/None	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Surrogate for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW14-DEC2020	N	Methylcyclohexane	1.00	0.910 J	0.910 J	+	ug/l	I/TR

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Trip Blank

The purpose of trip blanks is to determine the existence and magnitude of cross-contamination problems resulting from the shipping of samples. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in trip blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-TB34-DEC2020 (TB)/ TN0328-8	Methylene chloride	2.000	< 1.1	< 5	ug/l	U/None	T	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG292335-2 (BS)/ WG292335-2	4-Nitrophenol	0.000	10 - 114	10 - 114	percent	J/X	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB24-DEC2020 (EB)/ TN0328-7	2-Fluorophenol	1.370	19 - 119	10 - 119	percent	J/X	I	
NHFLA-EB24-DEC2020 (EB)/ TN0328-7	2,4,6-Tribromophenol	1.700	43 - 140	10 - 140	percent	J/X	I	
NHFLA-EB24-DEC2020 (EB)/ TN0328-7	Phenol-d6	2.400	10 - 90	10 - 90	percent	J/X	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
H1	Test Hold Time
I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
M2	Post Spike
T	Trip Blank
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: A2340B (Hardness by Calculation)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?			•	
Were target analytes in the method blank less than MDL?			•	
Were target analytes in the field blank less than MDL?		•		Equipment blank detection below LOD did not result in qualification for field sample data.
Was an LCS/LCSD pair prepared and analyzed with each batch?			•	
Were LCS/LCSD recoveries within project acceptance limits?			•	
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?		•		Equipment blank had a detection below the LOD for CHRYSENE. Field samples -001, -002, -004, -006 results for this analyte were qualified non-detect at the LOD or LOQ with U/V flag/ reason codes.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?		•		
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICV, ICAL, CCV outliers as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?		•

Method: SW6020 (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		Prep blank PBWNL22IMW4 had detections below the LOD for aluminum, copper, magnesium, potassium, sodium, chromium. Field samples were qualified non-detect at the LOD with U/L flags/reason codes for the following results: aluminum and chromium - -01, -02, -03, -04, -09, -10, -11, -12, -13, -14, copper - -01, -03, -04, -05, -09, -10, -11, -12, copper, magnesium, potassium, sodium - sample -007. Non-detect at LOQ - copper - -002, aluminum - -005, -006.
Were target analytes in the field blank less than MDL?		•		Equipment blanks had detections below the LOD for the following metals: Total and dissolved equipment blanks: aluminum, barium, copper, magnesium, potassium, sodium. Dissolved equipment blank only - calcium, chromium. The following field results were qualified as non-detect at the LOD or LOQ with U/V flags/reason codes: aluminum and copper - same as prep blank, chromium - samples -009, -010, - 011, -012, -013, -014.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•

Review Questions

Method: SW7196 (Chromium, Hexavalent (Colorimetric))				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?		•		Samples -001 and -004 were analyzed outside of project required holding time by a matter of minutes (2 and 14 respectively). Associated results were qualified with UJ flags and considered estimated.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG292118 had detection below LOD. All field results considered non-detect at LOD and qualified with U/L flags/reason codes.
Were target analytes in the field blank less than MDL?		•		Equipment blank had detection below LOD. All field results considered non-detect at the LOD or LOQ and qualified with U/V flags/reason codes.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			MS only
Were MS/MSD recoveries within project acceptance limits?		•		MS sample -007 recovery (85.7%) was within lab control limits (85-115%) but outside of project criteria (90-111%) so sample -007 result was qualified estimated with J/L/M flags/ reason codes.
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary

Review Questions

Method: SW7470 (Mercury in Liquid Waste (Manual Cold-Vapor Technique))				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?		•		Equipment blanks had detections below the LOD for both total and dissolved mercury. Following field results were qualified as non-detect at the LOQ with U/V flags/reason codes: Total mercury - -001, -002, -003, -004, -005, dissolved mercury - all field results. Sample -006 total mercury results were considered estimated and flagged J/V/+.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?	•			
Were the post spike recoveries within project acceptance limits?		•		Sample -001 total mercury PDS was an outlier biased high. Field result is considered estimated and qualified with M2 reason code (result also qualified non-detect due to equipment blank detection).
Were the serial dilution RPD values within project acceptance limits?	•			
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW8260 (Volatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Sample -004 surrogates were biased high for 1 of 4 recoveries. Field sample -004 results for methylcyclohexane (only detection) were qualified estimated with J/I/TR/+ flags/reason codes.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG292782-2 had detection below LOD for methylene chloride according to laboratory SDG case narrative. The batch QC data was not included in the SDG because this blank was only associated with sample -04RA which was not used for final reportable results.
Were target analytes in the field blank less than MDL?		•		Equipment blank had detections below the LOD for acetone and toluene and trip blank had detection below LOD for methylene chloride. Client sample -006 acetone results were qualified estimated with J/V/+ flags/reason codes.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			Spike samples were not from this SDG so recovery data was not available.
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICV outliers as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?		•		All sample re-extraction analyses were outside of project criteria holding times. All associated results should be considered estimated. Re-analysis data for these samples was not available in the database so qualifications were not applied based on these hold time outliers.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Acid fraction surrogates were biased low outside of rejection criteria for samples -007 and re-extractions for samples -002, -003, -005, -006, -007 so all acid fraction results for sample -007 (re-extractions not reported as final results) were qualified as unusable with X/I flags/reason codes. NOTE: QC batch WG292335 method blank and LCS also had at least 2 acid fraction surrogate outliers biased low below rejection criteria.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG292335 and WG292924 LCS recoveries were biased low or non-detect for ALL acid fraction analytes except 2-methylphenol and 4chloro3methylphenol as well as base-neutral fraction analytes hexachlorocyclopentadiene and 2,4-dinitro toluene in QC batch WG292335 only. All field sample results for these analytes were qualified with either X/C or UJ/C flags/reason codes. QCbatch WG292924 LCS also had high bias recovery outliers for benzaldehyde did not require qualification of client sample non-detect results.
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			Samples spiked were not from this SDG so recovery data was not available
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICAL, ICV and CCV outliers as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?		•		

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Were any data recommended for rejection (exclusion) in the data validation process?	•			All ACID FRACTION analyte results for samples -007 based on surrogate recovery outliers. Multiple acid fraction analyte results for all samples based on LCS recovery outliers.

Data Validation Report for TN0335
REVISED REPORT #1 - April 1, 2021
REVISION SUMMARY: Checklist narration updated for LOQ inclusion in total metals field blank comment.

Facility:	C02NY0079-02, Nike BU 51/52, Launch Area
Event:	Nike BU 51/52 - Hamburg NY - December Groundwater Sampling
SDG:	TN0335
Guidance Document:	Nike BU 51/52 Quality Assurance Project Plan
Prime Contractor:	Seres-Arcadis JV
Project Manager:	Jennifer Singer
Contract Laboratory(ies):	Katahdin Analytical Services, Scarborough, ME
Data Review Contractor:	CADENA LLC
Data Review Level:	S2AVEM
Primary Data Reviewer:	Jim Tomalia, Senior Environmental Compliance Specialist
Date Submitted:	March 29, 2021 - revised report April 1, 2021

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Scarborough, ME and were reported under sample delivery group (SDG) TN0335. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 282 results (18.15%) out of the 1554 results (sample and field QC samples) reported are qualified based on review and 135 results (8.69%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
A2340B	No additional comments; see Checklist for detail.
BNASIM	No additional comments; see Checklist for detail.
SW6020	No additional comments; see Checklist for detail.
SW7196	No additional comments; see Checklist for detail.
SW7470	No additional comments; see Checklist for detail.

Jim Tomalia — April 1, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, Prep Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of extraction found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP15-DEC2020 (FD)/ TN0335-8		41.16	< 40	< 80	days	J/UJ	H2	Prep to Test Exceeds UWL
NHFLA-EB25-DEC2020 (EB)/ TN0335-9		41.19	< 40	< 80	days	J/UJ	H2	Prep to Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Prep Hold Time for BNASIM

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP15-DEC2020	FD	2-Methylnaphthalene	0.190	0.0940 U	0.0940 UJ		ug/l	H2

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Dissolved, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB25-DEC2020 (EB)/ TN0335-19	Barium	0.3800	< 0.27	< 2	ug/l	U/None	V

In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Dissolved, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW9OB-DEC2020 (SD)/ TN0335-013P	Calcium	-58.33	87 - 118	30 - 125	percent	J/X	M	Spike amount Insignificant

NHFLA-EB25-DEC2020 (EB)/ TN0335-9	Acetone	11.00	< 2.2	< 5	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP15-DEC2020	FD	Acetone	5.00	5.30	5.30 J	+	ug/l	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW9OB-DEC2020 (N)/ TN0335-8	Methylcyclohexane	2.500	< 1	< 1	ug/l	J/UJ	D3	
NHFLA-MW9OB-DEC2020 (N)/ TN0335-8	Acetone	5.300	< 5	< 5	ug/l	J/UJ	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Field Duplicate RPD for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP15-DEC2020	FD	Methylcyclohexane	1.00	2.50	2.50 J		ug/l	D3
NHFLA-MW9OB-DEC2020	N	Methylcyclohexane	1.00	0.500 U	0.500 UJ		ug/l	D3

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG292782-2 (LB)/ WG292782-2	Methylene chloride	1.900	< 1.1	< 5	ug/l	U/None	L	
WG292785-10 (LB)/ WG292785-10	Methylene chloride	1.200	< 1.1	< 5	ug/l	U/None	L	
WG292846-2 (LB)/ WG292846-2	Methylene chloride	1.500	< 1.1	< 5	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-EB25-DEC2020	EB	Methylene chloride	5.00	1.40 J	2.50 UJ		ug/l	L/H1

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP14-DEC2020 (FD)/ TN0335-7	1,2-Dichloroethane-d4	123.0	81 - 118	10 - 118	percent	J/None	I	
NHFLA-MW15-DEC2020 (N)/ TN0335-6	1,2-Dichloroethane-d4	121.0	81 - 118	10 - 118	percent	J/None	I	
NHFLA-MW7BR-DEC2020 (N)/ TN0335-2	1,2-Dichloroethane-d4	120.0	81 - 118	10 - 118	percent	J/None	I	
NHFLA-MW7OB-DEC2020 (N)/ TN0335-1	1,2-Dichloroethane-d4	120.0	81 - 118	10 - 118	percent	J/None	I	
NHFLA-MW8-DEC2020 (N)/ TN0335-5	1,2-Dichloroethane-d4	123.0	81 - 118	10 - 118	percent	J/None	I	
NHFLA-MW9OB-DEC2020 (N)/ TN0335-3	1,2-Dichloroethane-d4	126.0	81 - 118	10 - 118	percent	J/None	I	
NHFLA-TB35-DEC2020 (TB)/ TN0335-10	1,2-Dichloroethane-d4	120.0	81 - 118	10 - 118	percent	J/None	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP14-DEC2020 (FD)/ TN0335-7		14.24	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-DUP15-DEC2020 (FD)/ TN0335-8		14.18	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-EB25-DEC2020 (EB)/ TN0335-9		14.85	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW15-DEC2020 (N)/ TN0335-6		14.06	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW7BR-DEC2020 (N)/ TN0335-2		14.08	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW7OB-DEC2020 (N)/ TN0335-1		14.11	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW8-DEC2020 (N)/ TN0335-5		14.05	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW9BR-DEC2020 (N)/ TN0335-4		14.08	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW9OB-DEC2020 (N)/ TN0335-3		14.12	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL
NHFLA-TB35-DEC2020 (TB)/ TN0335-10		14.48	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Test Hold Time for SW8260

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8270, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Table of All Qualified Results

Test Method: BNASIM	Extraction Method: SW3510							
FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Automated Data Review Detail Report for TN0335
C02NY0079-02, Nike BU 51/52, Launch Area
Nike BU 51/52 Quality Assurance Project Plan

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
A2340B/METHOD/NONE	9	9
BNASIM/SW3510/NONE	2	12
SW8270/SW3510/NONE	3	42

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
A2340B/METHOD/NONE	NHFLA-DUP14-DEC2020	FD	5	Hardness (as CaCO3)	14400	85.0	530	650	5	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Automated Data Review Detail Report for TN0335
C02NY0079-02, Nike BU 51/52, Launch Area
Nike BU 51/52 Quality Assurance Project Plan

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
SW8270/SW3510/NONE	NHFLA-MW9BR-DEC2020	N	1	Pentachlorophenol	20.0 X	2.40	20.0	26.0	25	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
D3	Field Duplicate RPD
H1	Test Hold Time
H2	Prep Hold Time
I	Surrogate recovery outside project limits.
L	Lab Blank
M	MS Recovery
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: A2340B (Hardness by Calculation)

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?			•	
Were target analytes in the method blank less than MDL?			•	
Were target analytes in the field blank less than MDL?		•		Equipment blank detection below LOD did not result in qualification for field sample data.
Was an LCS/LCSD pair prepared and analyzed with each batch?			•	
Were LCS/LCSD recoveries within project acceptance limits?			•	
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?		•		Samples -008 and -009 were analyzed one day outside of the 40 day project analytical hold time criteria so these results were qualified as estimated with UJ/H2 flags/reason codes.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		QC batch WG292338 LCS had 1 of 3 surrogate recoveries biased high. Qualifications were not applied based on this high bias batch QC outlier.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?		•		
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		CCV outliers as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW6020 (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch NL24IMW2 had detections below the LOD for aluminum, barium, copper, magnesium, manganese, potassium, sodium, chromium, cobalt, nickel. The following sample results were qualified as non-detect at the LOD with U/L flags/reason codes - aluminum - -001, -003, -008, -009, copper - all detected results, magnesium, manganese, potassium, sodium - sample -009, cobalt - -001, -002, -004, -007, -009, -011, -012, -014, -015, -016, -017, chromium - all detected results, nickel - -001, -002, -003, -004, -007. The following results were qualified non-detect at the LOQ with U/L flags/reason codes - aluminum - -005, -015, cobalt - -005, -006.
Were target analytes in the field blank less than MDL?		•		Dissolved equipment blank had detections below the LOD for aluminum, barium, calcium, copper, magnesium, manganese, potassium, sodium. The following dissolved metals results were qualified non-detect at the LOD with U/V flags/reason codes - aluminum - -013, -014, -016, -017, -018, copper - all field detections. Aluminum result -015 was qualified non-detect at the LOQ. Total metals equipment blank had detections below the LOD for aluminum, calcium, copper, magnesium, manganese, potassium, sodium, cobalt. The following field results were qualified non-detect at the LOD or LOQ with U/V flag/ reason codes: same as prep blank with exception of equipment blank qualifiers.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -013 recoveries for calcium and sodium were not used to qualify field results since spike concentration was considered not significant relative to source sample concentrations. (4X rule). Iron M flag was removed since SDG results were within lab and project criteria.
Was the MS/MSD RPD within project acceptance limits?	•			
Were the post spike recoveries within project acceptance limits?		•		Sample -013 recoveries for calcium, magnesium, manganese and sodium were not used to qualify field results due to 4X rule. Iron M flag was removed.
Were the serial dilution RPD values within project acceptance limits?	•			

Review Questions

Method: SW6020 (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Was the laboratory duplicate RPD within project acceptance limits?	•			
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			D3 qualifiers were removed for zinc based on <5xRL criteria using LOD concentration for calculation of non-detect results.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•

Review Questions

Method: SW8260 (Volatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?		•		Sample -009 was analyzed outside of project hold time criteria so results were qualified as estimated with J/UJ flags. NOTE: all other HT flags were removed from database.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Re-analysis results for samples -001, -002, -003, -005, -006, -007, -010 had 1 of 4 surrogates recoveries biased high. None of this data was used for final results so qualifiers do not appear in database.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch WG292782, WG292785, WG292846 all had detections for methylene chloride below the LOD. Sample -009 methylene chloride result only was qualified as non-detect at the LOD with U/L flags/reason codes.
Were target analytes in the field blank less than MDL?		•		Trip blank was non-detect but equipment blank had detections below the LOD for toluene and methylene chloride and above the LOQ for acetone. Sample -008 acetone result was qualified estimated with J/V/+ flags/reason codes.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?			•	QC batch MS was not reported due to being non-SDG sample.
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?		•		Field duplicate and source sample (-003 and -008)results for methylcyclohexane were qualified as estimated with J/UJ/D3 flags/reason codes. Primary result was non-detect (RL 1.0) and FD result was 2.5 using criteria limit of 1.0.
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICV outliers as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?		•		All sample re-extraction analyses were outside of project criteria holding times. All associated results should be considered estimated. Re-analysis data for these samples was not available in the database so qualifications were not applied based on these hold time outliers.
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Acid fraction surrogates were biased low outsideof rejection criteria for samples -001 through -009 and reextractions for samples -001, -004, -005, -006,-007, -008, -009 and -009RA. so all acid fraction results for these samples (reextractions not reported as final results) were qualified as unusable with X/I flags/reason codes. NOTE: QC batch WG292337, WG292699, WG292649 method blank and LCS also had at least 2 acid fraction surrogate outliers biased low below rejection criteria.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG292337, WG292649 and WG292699 LCS recoveries were biased low or non-detect for most acid fraction analytes. All field sample results for these analytes were qualified with either X/C or UJ/C flags/reason codes. QCbatch WG292337 LCS also had high bias recovery outliers for benzaldehyde did not require qualification of client sample non-detect results.
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			Samples spiked were not from this SDG so recovery data was not available
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICAL, ICV, IS and CCV outliers as noted in SDG case narrative were not addressed as part of this stage 2A review
Were DoD QSM corrective actions followed if deviations were noted?		•		

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Were any data recommended for rejection (exclusion) in the data validation process?	•			All ACID FRACTION analyte results for samples -001 through -009 based on surrogate recovery outliers. Multiple acid fraction analyte results for all samples based on LCS recovery outliers.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Katahdin Analytical Services, Scarborough, ME and were reported under sample delivery group (SDG) TN0376. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Extracted Internal Standard
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 34 results (6.16%) out of the 552 results (sample and field QC samples) reported are qualified based on review and 15 results (2.72%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method BNASIM, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG292407-1 (LB)/ WG292407-1	Chrysene	0.04900	< 0.036	< 0.2	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method BNASIM, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG292407-2 (BS)/ WG292407-2	2-Methylnaphthalene	121.0	39 - 114	10 - 114	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW6020, Dissolved, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB26-DEC2020 (EB)/ TN0376-7	Nickel	0.2000	< 0.15	< 2	ug/l	U/None	V	
NHFLA-EB26-DEC2020 (EB)/ TN0376-7	Chromium	0.2800	< 0.22	< 5	ug/l	U/None	V

NHFLA-EB26-DEC2020 (EB)/ TN0376-7	Sodium	414.0	< 19	< 1000	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Equipment Blank for SW6020, Dissolved

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW13-DEC2020	N	Aluminum	100	49.5 J	100 U		ug/l	V
NHFLA-MW13-DEC2020	N	Chromium	5.00	0.510 J	4.00 U		ug/l	V
NHFLA-MW13-DEC2020	N	Copper	3.00	0.590 J	2.00 U		ug/l	V
NHFLA-MW13-DEC2020	N	Nickel	2.00	1.65 J	2.00 U		ug/l	V
NHFLA-MW6-DEC2020	N	Aluminum	100	75.5 J	100 U		ug/l	V
NHFLA-MW6-DEC2020	N	Chromium	5.00	0.520 J	4.00 U		ug/l	V
NHFLA-MW6-DEC2020	N	Copper	3.00	1.30 J	2.00 U		ug/l	V

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW6020, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW7196, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG292269-1 (LB)/ WG292269-1	Chromium, Hexavalent	0.002400	< 0.00076	< 0.025	mg/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW7196

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW13-DEC2020	N	Chromium, Hexavalent	0.0250	0.00190 J	0.0125 U		mg/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-EB26-DEC2020 (EB)/ TN0376-3	Toluene	0.4000	< 0.27	< 1	ug/l	U/None	V	
NHFLA-EB26-DEC2020 (EB)/ TN0376-3	Acetone	8.200	< 2.2	< 5	ug/l	U/None	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG292782-2 (LB)/ WG292782-2	Methylene chloride	1.900	< 1.1	< 5	ug/l	U/None	L	
WG292785-10 (LB)/ WG292785-10	Methylene chloride	1.200	< 1.1	< 5	ug/l	U/None	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Lab Blank for SW8260

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-TB36-DEC2020	TB	Methylene chloride	5.00	2.00 J	2.50 U		ug/l	L

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260, Trip Blank

The purpose of trip blanks is to determine the existence and magnitude of cross-contamination problems resulting from the shipping of samples. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in trip blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-TB36-DEC2020 (TB)/ TN0376-4	Methylene chloride	2.000	< 1.1	< 5	ug/l	U/None	T	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WG292406-2 (BS)/ WG292406-2	Benzaldehyde	4420	10 - 189	10 - 189	percent	J/None	C

WG292924-2 (BS)/ WG292924-2	Phenol	3.120	10 - 78	10 - 78	percent	J/X	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8270, Surrogate

Method performance for individual samples is demonstrated through spiking activities. All samples are spiked with surrogate compounds prior to sample preparation. The sample itself may produce effects due to such factors as interferences and high concentrations of analytes. Summary forms were evaluated and compared to electronic data deliverables. Surrogate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW13-DEC2020 (N)/ TN0376-1	2,4,6-Tribromophenol	26.70	43 - 140	10 - 140	percent	J/UJ	I	
NHFLA-MW13-DEC2020 (N)/ TN0376-1	Phenol-d6	8.460	10 - 90	10 - 90	percent	J/X	I	
NHFLA-MW13-DEC2020 (N)/ TN0376-1	2-Fluorophenol	9.610	19 - 119	10 - 119	percent	J/X	I	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Surrogate for SW8270

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Table of All Qualified Results

Automated Data Review Detail Report for TN0376
C02NY0079-02, Nike BU 51/52, Launch Area
Nike BU 51/52 Quality Assurance Project Plan

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
A2340B/METHOD/NONE	3	3

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
A2340B/METHOD/NONE	NHFLA-EB26-DEC2020	EB	5	Hardness (as CaCO3)	110 J	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW13-DEC2020	N	5	Hardness (as CaCO3)	43700	85.0	530	650	5	ug/L
A2340B/METHOD/NONE	NHFLA-MW6-DEC2020	N	5	Hardness (as CaCO3)	140000	85.0	530	650	5	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
I	Surrogate recovery outside project limits.
L	Lab Blank
T	Trip Blank
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: A2340B (Hardness by Calculation)

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?		•		
Were target analytes in the method blank less than MDL?			•	
Were target analytes in the field blank less than MDL?		•		Equipment blank detection below LOD.
Was an LCS/LCSD pair prepared and analyzed with each batch?		•		
Were LCS/LCSD recoveries within project acceptance limits?			•	
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?			•	
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?			•	
Were the serial dilution RPD values within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?		•		
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: BNASIM (GC/MS-SIM Analysis by SW8270)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch method blank WG292407-1 had a detection below LOD for CHRYSENE. Qualifications were not required based on this prep blank detection..
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG292407 recovery was biased high for 2-methylnaphthalene. Qualification was not required based on this high bias QC outlier since all associated results were non-detect.
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?		•		
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		Internal standard and CCV outliers as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW6020 (Trace Metals by Inductively Coupled Plasma/Mass Spectrometry)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batch prep blank PBWNL23IMW2 had detections below the LOD for aluminum, chromium, copper, iron, magnesium. The following field sample results were qualified non-detect at LOD with U/L flags reason codes: Sample -003 - aluminum, chromium, copper, magnesium, sample -001 aluminum, chromium, copper, sample -002 - chromium, copper.
Were target analytes in the field blank less than MDL?		•		Equipment blanks had detections below theLOD for TOTAL and DISSOLVED metals - ALUMINUM, CALCIUM, CHROMIUM, COPPER,MAGNESIUM, NICKEL, SODIUM and dissolved metals only for POTASSIUM. See equipment blank detection qualification summary table for field sample results qualified non-detect at LOD with U/V flag/reason code based on appropriate equipment blank.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?			•	Spiked sample was not from this SDG so recovery data was not available.
Was the MS/MSD RPD within project acceptance limits?			•	
Were the post spike recoveries within project acceptance limits?	•			
Were the serial dilution RPD values within project acceptance limits?	•			
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•

Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?	•			
Were the post spike recoveries within project acceptance limits?		•		Sample -006 PDS was outlier biased high. Sample result was non-detect so was not affected by this high bias so qualification was not required.
Were the serial dilution RPD values within project acceptance limits?	•			
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?	•			
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW8260 (Volatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?		•		QC batches WG292782 and WG292785 had detections below the LOD for methylene chloride. Field sample -004 methylene chloride result was qualified as non-detect at the LOD with U/L flag/reason code.
Were target analytes in the field blank less than MDL?		•		Trip blank had a detection below the LOD for methylene chloride (qualified as noted above). Equipment blank had detections above the LOQ for acetone and below the LOD for toluene. Qualifications were not required based on these field blank detections.
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			Spike samples were not from this SDG so recovery data was not available.
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICV outliers as noted in SDG case narrative were not addressed as part of this stage 2A review
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?		•		

Review Questions

Method: SW8270 (Semivolatile Organic Compounds by Capillary GC/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Were surrogate recoveries within project acceptance limits?		•		Acid fraction surrogates were biased low outside of rejection criteria for samples -001, -001RE so all acid fraction results for these samples were qualified as unusable with X/I flags/reason codes. NOTE: QC batch WG292924 method blank and LCS also had at least 2 acid fraction surrogate outliers biased low below rejection criteria.
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch WG292924 LCS recoveries were biased low or non-detect for 14 acid fraction analytes (all acid fraction analytes except methyphenols and 4 -chloro-3-methylphenol). Sample -001RE only acid fraction results for these analytes were qualified with either X/C or UJ/C flags/reason codes. QC batch WG292406 LCS high bias recovery outliers for benzaldehyde did not require qualification of client sample non-detect results.
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			Samples spiked were not from this SDG so recovery data was not available.
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?		•		ICAL, ICV and CCV outliers as noted in SDG case narrative were not addressed as part of this stage 2A review.
Were DoD QSM corrective actions followed if deviations were noted?		•		
Were any data recommended for rejection (exclusion) in the data validation process?	•			All ACID FRACTION analyte results for samples-001/-001RE based on surrogaterecovery outliers. Multiple acid fraction analyteresults for samples -001RE basedon LCS recovery outliers.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-11489-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- LCS Recovery
- LCS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 0 results (0.00%) out of the 12 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Reported as part of SDG SN6964.

Jim Tomalia

January 12, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method M8315A, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW5OB-A-AUG2020 (N)/ 410-11489-1		6.620	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW5OB-B-AUG2020 (N)/ 410-11489-2		6.660	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW5OB-C-AUG2020 (N)/ 410-11489-3		6.500	< 3	< 6	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Qualified Results

No results associated with this sample delivery group required qualification.

Table of Results with Modified Qualifiers

Modified Qualifiers for test method M8315A

FieldSample ID	Type	Analyte	LOQ	Lab Result	ADR Result	Modified Result	Reason
NHFLA-MW5OB-A-AUG2020	N	1,1-Dimethylhydrazine	0.120	0.100 U	0.100 X	0.100 U	
NHFLA-MW5OB-A-AUG2020	N	Hydrazine	0.120	0.0500 U	0.0500 X	0.0500 U	
NHFLA-MW5OB-A-AUG2020	N	Methyl hydrazine	0.120	0.100 U	0.100 X	0.100 U	
NHFLA-MW5OB-B-AUG2020	N	1,1-Dimethylhydrazine	0.130	0.100 U	0.100 X	0.100 U	
NHFLA-MW5OB-B-AUG2020	N	Hydrazine	0.130	0.0500 U	0.0500 X	0.0500 U	
NHFLA-MW5OB-B-AUG2020	N	Methyl hydrazine	0.130	0.100 U	0.100 X	0.100 U	
NHFLA-MW5OB-C-AUG2020	N	1,1-Dimethylhydrazine	0.120	0.0990 U	0.0990 X	0.0990 U	
NHFLA-MW5OB-C-AUG2020	N	Hydrazine	0.120	0.0500 U	0.0500 X	0.0500 U	
NHFLA-MW5OB-C-AUG2020	N	Methyl hydrazine	0.120	0.0990 U	0.0990 X	0.0990 U	

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
M8315A/NONE/NONE	1	3

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
M8315A/NONE/NONE	NHFLA-EB1-AUG2020	EB	1	1,1-Dimethylhydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L
M8315A/NONE/NONE	NHFLA-EB1-AUG2020	EB	1	Hydrazine	0.500 U	0.130	0.500	0.630	0.5	ug/L
M8315A/NONE/NONE	NHFLA-EB1-AUG2020	EB	1	Methyl Hydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
H1	Test Hold Time

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-11491-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- LCS Recovery
- LCS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 0 results (0.00%) out of the 12 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: M8315A (Determination of Hydrazine, Monomethylhydrazine, and 1,1- Dimethylhydrazine in Aqueous and Soil Samples by LC/MS/MS)

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			H1 qualifiers removed since samples prepped and analyzed within project criteria holding times.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?		•		
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-11806-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 2 results (16.67%) out of the 12 results (sample and field QC samples) reported are qualified based on review and 1 results (8.33%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Reported in SDG SN7081.

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method M8315A, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
LCS 410-37524/2-A (BS)/ LCS 410-37524/2-A	1,1-Dimethylhydrazine	135.7	70 - 135	10 - 135	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method M8315A, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW16-A-AUG2020 (MS)/ 410-11806-1MS	Hydrazine	4.233	54 - 128	10 - 128	percent	J/X	M	
NHFLA-MW16-A-AUG2020 (SD)/ 410-11806-1MSD	Methyl hydrazine	21.71	29 - 187	10 - 187	percent	J/UJ	M	
NHFLA-MW16-A-AUG2020 (SD)/ 410-11806-1MSD	Hydrazine	3.783	54 - 128	10 - 128	percent	J/X	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for M8315A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW16-A-AUG2020	N	Hydrazine	0.120	0.0500 U J1 M	0.0500 X		ng/g	M
NHFLA-MW16-A-AUG2020	N	Methyl hydrazine	0.120	0.0990 U J1	0.0990 UJ		ng/g	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method M8315A, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW16-A-AUG2020 (N)/ 410-11806-1		5.540	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW16-A-AUG2020 (N)/ 410-11806-1MS		5.540	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW16-A-AUG2020 (N)/ 410-11806-1MSD		5.540	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW16-B-AUG2020 (N)/ 410-11806-2		5.530	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW16-C-AUG2020 (N)/ 410-11806-3		5.390	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Table of All Qualified Results

Test Method: M8315A Extraction Method: NONE								
FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW16-A-AUG2020	N	Hydrazine	0.120	0.0500 U J1 M	0.0500 X		ng/g	M
NHFLA-MW16-A-AUG2020	N	Methyl hydrazine	0.120	0.0990 U J1	0.0990 UJ		ng/g	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
M8315A/NONE/NONE	1	3

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
M8315A/NONE/NONE	NHFLA-EB4-AUG2020	EB	1	1,1-Dimethylhydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L
M8315A/NONE/NONE	NHFLA-EB4-AUG2020	EB	1	Hydrazine	0.500 U	0.130	0.500	0.630	0.5	ug/L
M8315A/NONE/NONE	NHFLA-EB4-AUG2020	EB	1	Methyl Hydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
H1	Test Hold Time
M	MS Recovery
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: M8315A (Determination of Hydrazine, Monomethylhydrazine, and 1,1- Dimethylhydrazine in Aqueous and Soil Samples by LC/MS/MS)

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch 37524 high bias for 1,1-dimethylhydrazine. Qualification of field results not required (all ND).
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 MS/MSD recovery low bias for hydrazine below reject criteria. Sample -001 hydrazine results qualified rejected with X/M flag/reason codes. MSD recovery only biased low for monomethylhydrazine so sample -001 result for this analyte qualified estimated with UJ/M flag/reason codes.
Was the MS/MSD RPD within project acceptance limits?	•			
Were surrogate recoveries within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?	•			Sample -001 Hydrazine result based on MS recovery outlier.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-11807-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- LCS Recovery
- LCS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 0 results (0.00%) out of the 18 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method M8315A, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
LCS 410-37524/2-A (BS)/ LCS 410-37524/2-A	1,1-Dimethylhydrazine	135.7	70 - 135	10 - 135	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method M8315A, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW7OB-A-AUG2020 (N)/ 410-11807-3		6.410	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW7OB-B-AUG2020 (N)/ 410-11807-4		6.390	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW7OB-C-AUG2020 (N)/ 410-11807-5		6.390	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW9OB-A-AUG2020 (N)/ 410-11807-1		6.480	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW9OB-B-AUG2020 (N)/ 410-11807-2		6.590	< 3	< 6	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Qualified Results

No results associated with this sample delivery group required qualification.

NHFLA-MW9OB-B-AUG2020	N	Hydrazine	0.130	0.0510 U	0.0510 X	0.0510 U	
NHFLA-MW9OB-B-AUG2020	N	Methyl hydrazine	0.130	0.100 U	0.100 X	0.100 U	

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
M8315A/NONE/NONE	1	3

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
M8315A/NONE/NONE	NHFLA-EB3-AUG2020	EB	1	1,1-Dimethylhydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L
M8315A/NONE/NONE	NHFLA-EB3-AUG2020	EB	1	Hydrazine	0.500 U	0.130	0.500	0.630	0.5	ug/L
M8315A/NONE/NONE	NHFLA-EB3-AUG2020	EB	1	Methyl Hydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
H1	Test Hold Time

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: M8315A (Determination of Hydrazine, Monomethylhydrazine, and 1,1- Dimethylhydrazine in Aqueous and Soil Samples by LC/MS/MS)

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			H1 qualifiers removed since samples prepped and analyzed within project criteria holding times.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch 37524 LCS had high bias for 1,1-dimethylhydrazine. Qualifications of field results not required (all ND).
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?		•		
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?		•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-12240-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 12 results (50.00%) out of the 24 results (sample and field QC samples) reported are qualified based on review and 8 results (33.33%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Reported as part of SDG SN7207.

Jim Tomalia

April 30, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method M8315A, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

M8315A/NONE/NONE	1	3

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
M8315A/NONE/NONE	NHFLA-EB7-AUG2020	EB	1	1,1-Dimethylhydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L
M8315A/NONE/NONE	NHFLA-EB7-AUG2020	EB	1	Hydrazine	0.500 U	0.130	0.500	0.630	0.5	ug/L
M8315A/NONE/NONE	NHFLA-EB7-AUG2020	EB	1	Methyl Hydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
M	MS Recovery
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: M8315A (Determination of Hydrazine, Monomethylhydrazine, and 1,1- Dimethylhydrazine in Aqueous and Soil Samples by LC/MS/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 and -002 MS recoveries biased low below reject criteria for hydrazine and methylhydrazine and biased low but above reject criteria for 1,1-dimethylhydrazine. Samples -001, -002, -007, -008 hydrazine and methylhydrazine results qualified rejected with X/M flags/reason codes and 1,1-dimethylhydrazine results for these samples estimated with UJ/M flags/reason codes.
Was the MS/MSD RPD within project acceptance limits?	•			
Were surrogate recoveries within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?	•			Based on MS recoveries below reject criteria: hydrazine and methylhydrazine for samples - 001, -002, -007, -008.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-12373-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- LCS Recovery
- LCS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 9 results (100.00%) out of the 9 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

January 12, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method M8315A, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW2-A-AUG2020 (N)/ 410-12373-1		8.190	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW2-B-AUG2020 (N)/ 410-12373-2		8.180	< 3	< 6	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Qualified Results

No results associated with this sample delivery group required qualification.

Table of Results with Modified Qualifiers

NHFLA-MW2-B-AUG2020	N	Hydrazine	0.120	0.0500 U	0.0500 X	0.0500 UJ	U
NHFLA-MW2-B-AUG2020	N	Methyl hydrazine	0.120	0.100 U	0.100 X	0.100 UJ	U

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-12376-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- LCS Recovery
- LCS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 9 results (75.00%) out of the 12 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
M8315A/NONE/NONE	1	3

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
M8315A/NONE/NONE	NHFLA-EB6-AUG2020	EB	1	1,1-Dimethylhydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L
M8315A/NONE/NONE	NHFLA-EB6-AUG2020	EB	1	Hydrazine	0.500 U	0.130	0.500	0.630	0.5	ug/L
M8315A/NONE/NONE	NHFLA-EB6-AUG2020	EB	1	Methyl Hydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
U	Receipt Temperature

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-12746-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- LCS Recovery
- LCS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 0 results (0.00%) out of the 12 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method M8315A, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
LCS 410-40694/2-A (BS)/ LCS 410-40694/2-A	1,1-Dimethylhydrazine	135.5	70 - 135	10 - 135	percent	J/None	C	
LCS 410-40709/2-A (BS)/ LCS 410-40709/2-A	1,1-Dimethylhydrazine	124.7	86 - 124	10 - 124	percent	J/None	C	
LCSD 410-40709/3-A (BD)/ LCSD 410-40709/3-A	1,1-Dimethylhydrazine	125.3	86 - 124	10 - 124	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method M8315A, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW13-A-AUG2020 (N)/ 410-12746-1		7.460	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW13-B-AUG2020 (N)/ 410-12746-2		7.440	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW13-C-AUG2020 (N)/ 410-12746-3		7.400	< 3	< 6	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Qualified Results

No results associated with this sample delivery group required qualification.

Table of Results with Modified Qualifiers

Modified Qualifiers for test method M8315A

NHFLA-MW13-A-AUG2020	N	1,1-Dimethylhydrazine	0.130	0.100 U Q	0.100 X	0.100 U	
NHFLA-MW13-A-AUG2020	N	Hydrazine	0.130	0.0500 U	0.0500 X	0.0500 U	
NHFLA-MW13-A-AUG2020	N	Methyl hydrazine	0.130	0.100 U	0.100 X	0.100 U	
NHFLA-MW13-B-AUG2020	N	1,1-Dimethylhydrazine	0.130	0.100 U Q	0.100 X	0.100 U	
NHFLA-MW13-B-AUG2020	N	Hydrazine	0.130	0.0500 U	0.0500 X	0.0500 U	
NHFLA-MW13-B-AUG2020	N	Methyl hydrazine	0.130	0.100 U	0.100 X	0.100 U	
NHFLA-MW13-C-AUG2020	N	1,1-Dimethylhydrazine	0.120	0.100 U Q	0.100 X	0.100 U	
NHFLA-MW13-C-AUG2020	N	Hydrazine	0.120	0.0500 U	0.0500 X	0.0500 U	
NHFLA-MW13-C-AUG2020	N	Methyl hydrazine	0.120	0.100 U	0.100 X	0.100 U	

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-12747-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 6 results (40.00%) out of the 15 results (sample and field QC samples) reported are qualified based on review and 4 results (26.67%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method M8315A, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
LCS 410-40694/2-A (BS)/ LCS 410-40694/2-A	1,1-Dimethylhydrazine	135.5	70 - 135	10 - 135	percent	J/None	C	
LCS 410-40709/2-A (BS)/ LCS 410-40709/2-A	1,1-Dimethylhydrazine	124.7	86 - 124	10 - 124	percent	J/None	C	
LCSD 410-40709/3-A (BD)/ LCSD 410-40709/3-A	1,1-Dimethylhydrazine	125.3	86 - 124	10 - 124	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method M8315A, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MS3-AUG2020 (MS)/ 410-12747-4MS	Hydrazine	2.624	54 - 128	10 - 128	percent	J/X	M	
NHFLA-MS3-AUG2020 (MS)/ 410-12747-4MS	Methyl hydrazine	3.322	29 - 187	10 - 187	percent	J/X	M	
NHFLA-MS3-AUG2020 (MS)/ 410-12747-4MS	1,1-Dimethylhydrazine	59.46	86 - 124	10 - 124	percent	J/UJ	M	
NHFLA-MSD3-AUG2020 (SD)/ 410-12747-4MSD	Hydrazine	2.169	54 - 128	10 - 128	percent	J/X	M	
NHFLA-MSD3-AUG2020 (SD)/ 410-12747-4MSD	Methyl hydrazine	3.238	29 - 187	10 - 187	percent	J/X	M	
NHFLA-MSD3-AUG2020 (SD)/ 410-12747-4MSD	1,1-Dimethylhydrazine	69.54	86 - 124	10 - 124	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for M8315A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP4-AUG2020	FD	1,1-Dimethylhydrazine	0.130	0.100 U Q J1	0.100 UJ		ng/g	M
NHFLA-DUP4-AUG2020	FD	Hydrazine	0.130	0.0510 U J1	0.0510 X		ng/g	M
NHFLA-DUP4-AUG2020	FD	Methyl hydrazine	0.130	0.100 U J1	0.100 X		ng/g	M
NHFLA-MW3-B-AUG2020	N	1,1-Dimethylhydrazine	0.120	0.0990 U Q	0.0990 UJ		ng/g	M
NHFLA-MW3-B-AUG2020	N	Hydrazine	0.120	0.0500 U	0.0500 X		ng/g	M
NHFLA-MW3-B-AUG2020	N	Methyl hydrazine	0.120	0.0990 U	0.0990 X		ng/g	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method M8315A, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP3-AUG2020 (FD)/ 410-12747-3		3.510	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL
NHFLA-DUP4-AUG2020 (FD)/ 410-12747-4		3.510	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW3-A-AUG2020 (N)/ 410-12747-1		3.500	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL
NHFLA-MW3-B-AUG2020 (N)/ 410-12747-2		3.480	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Table of All Qualified Results

Test Method: M8315A	Extraction Method: NONE							
FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-DUP4-AUG2020	FD	1,1-Dimethylhydrazine	0.130	0.100 U Q J1	0.100 UJ		ng/g	M
NHFLA-DUP4-AUG2020	FD	Hydrazine	0.130	0.0510 U J1	0.0510 X		ng/g	M
NHFLA-DUP4-AUG2020	FD	Methyl hydrazine	0.130	0.100 U J1	0.100 X		ng/g	M
NHFLA-MW3-B-AUG2020	N	1,1-Dimethylhydrazine	0.120	0.0990 U Q	0.0990 UJ		ng/g	M
NHFLA-MW3-B-AUG2020	N	Hydrazine	0.120	0.0500 U	0.0500 X		ng/g	M
NHFLA-MW3-B-AUG2020	N	Methyl hydrazine	0.120	0.0990 U	0.0990 X		ng/g	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Table of Results with Modified Qualifiers

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
M8315A/NONE/NONE	1	3

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
M8315A/NONE/NONE	NHFLA-EB9-AUG2020	EB	1	1,1-Dimethylhydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L
M8315A/NONE/NONE	NHFLA-EB9-AUG2020	EB	1	Hydrazine	0.500 U	0.130	0.500	0.630	0.5	ug/L
M8315A/NONE/NONE	NHFLA-EB9-AUG2020	EB	1	Methyl Hydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
C	LCS Recovery
H1	Test Hold Time
M	MS Recovery
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: M8315A (Determination of Hydrazine, Monomethylhydrazine, and 1,1- Dimethylhydrazine in Aqueous and Soil Samples by LC/MS/MS)

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			H1 qualifiers removed since samples prepped and analyzed within project criteria holding times.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		QC batch 40709 high bias for 1,1-dimethylhydrazine did not result in qualification of field results (all ND).
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -004 MS/MSD recoveries biased low below reject criteria for hydrazine and monomethylhydrazine. Sample -004 and its parent sample -002 qualified rejected with X/M flags/reason codes for these analytes. 1,1-Dimethylhydrazine MS/MSD recoveries biased low but above reject criteria so these sample -002, -004 results qualified estimated with UJ/M flags/reason codes.
Was the MS/MSD RPD within project acceptance limits?	•			
Were surrogate recoveries within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?	•			Samples -002 and -004 hydrazine and monomethylhydrazine based on MS recovery low bias outliers.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-13059-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 3 results (16.67%) out of the 18 results (sample and field QC samples) reported are qualified based on review and 2 results (11.11%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Reported as part of SDG SN7357.

Analytical Method	Data Reviewer Comment
M8315A	No additional comments; see Checklist for detail.

Jim Tomalia

January 12, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method M8315A, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW8-A-SEP2020 (MS)/ 410-13059-1MS	Hydrazine	1.197	54 - 128	10 - 128	percent	J/X	M	
NHFLA-MW8-A-SEP2020 (MS)/ 410-13059-1MS	Methyl hydrazine	3.000	29 - 187	10 - 187	percent	J/X	M	
NHFLA-MW8-A-SEP2020 (MS)/ 410-13059-1MS	1,1-Dimethylhydrazine	78.67	86 - 124	10 - 124	percent	J/UJ	M	
NHFLA-MW8-A-SEP2020 (SD)/ 410-13059-1MSD	Hydrazine	1.168	54 - 128	10 - 128	percent	J/X	M	
NHFLA-MW8-A-SEP2020 (SD)/ 410-13059-1MSD	Methyl hydrazine	12.35	29 - 187	10 - 187	percent	J/UJ	M	
NHFLA-MW8-A-SEP2020 (SD)/ 410-13059-1MSD	1,1-Dimethylhydrazine	75.17	86 - 124	10 - 124	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for M8315A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW8-A-SEP2020	N	1,1-Dimethylhydrazine	0.120	0.0990 U J1	0.0990 UJ		ng/g	M
NHFLA-MW8-A-SEP2020	N	Hydrazine	0.120	0.0500 U J1	0.0500 X		ng/g	M
NHFLA-MW8-A-SEP2020	N	Methyl hydrazine	0.120	0.0990 U J1	0.0990 X		ng/g	M/D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method M8315A, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW8-A-SEP2020 (SD)/ 410-13059-1MSD	Methyl hydrazine	1.390	< 0.12	< 0.12	ng/g	J/UJ	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS RPD for M8315A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW8-A-SEP2020	N	Methyl hydrazine	0.120	0.0990 U J1	0.0990 X		ng/g	M/D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method M8315A, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment

NHFLA-MW8-B-SEP2020 (N)/ 410-13059-2		8.200	< 3	< 6	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Table of All Qualified Results

Test Method: M8315A Extraction Method: NONE								
FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW8-A-SEP2020	N	1,1-Dimethylhydrazine	0.120	0.0990 U J1	0.0990 UJ		ng/g	M
NHFLA-MW8-A-SEP2020	N	Hydrazine	0.120	0.0500 U J1	0.0500 X		ng/g	M
NHFLA-MW8-A-SEP2020	N	Methyl hydrazine	0.120	0.0990 U J1	0.0990 X		ng/g	M/D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
M8315A/NONE/NONE	1	3

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
M8315A/NONE/NONE	NHFLA-EB10-SEP2020	EB	1	1,1-Dimethylhydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L
M8315A/NONE/NONE	NHFLA-EB10-SEP2020	EB	1	Hydrazine	0.500 U	0.130	0.500	0.630	0.5	ug/L
M8315A/NONE/NONE	NHFLA-EB10-SEP2020	EB	1	Methyl Hydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
D	MS RPD
H1	Test Hold Time
M	MS Recovery
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: M8315A (Determination of Hydrazine, Monomethylhydrazine, and 1,1- Dimethylhydrazine in Aqueous and Soil Samples by LC/MS/MS)

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			H1 qualifiers removed since samples prepped and analyzed within project criteria holding times.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 MS/MSD recoveries biased low and less than reject criteria for hydrazine and monomethylhydrazine. MS/MSD RPD also outlier for monomethylhydrazine. These sample results were qualified as rejected with X/M flags/reason codes with D reason code added for monomethylhydrazine. 1,1-dimethylhydrazine MS/MSD recoveries also biased low but above reject criteria so these results qualified estimated with UJ/M flags/reason codes.
Was the MS/MSD RPD within project acceptance limits?		•		sample -001 monomethylhydrazine outlier.
Were surrogate recoveries within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?	•			sample -001 hydrazine and monomethylhydrazine based on MS recovery outliers below reject criteria.

Facility:	C02NY0079-02, Nike BU 51/52, Launch Area
Event:	Nike BU 51/52 - Hamburg NY - First Soil Sampling Event
SDG:	410-13060-1_52_2a_FUDSChem
Guidance Document:	Nike BU 51/52 Quality Assurance Project Plan
Prime Contractor:	Seres-Arcadis JV
Project Manager:	Jennifer Singer
Contract Laboratory(ies):	Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA
Data Review Contractor:	CADENA LLC
Data Review Level:	S2AVEM
Primary Data Reviewer:	Jim Tomalia, Senior Environmental Compliance Specialist
Date Submitted:	November 19, 2020

Field Sample ID	Lab Sample ID	Matrix	Type/Type Code	M8315A
NHFLA-MW14-A-SEP2020	410-13060-1	Solid	Field Sample/N	X
NHFLA-MW14-B-SEP2020	410-13060-2	Solid	Field Sample/N	X
NHFLA-EB11-SEP2020	410-13060-3	Water	Equipment Blank/EB	X

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-13060-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- LCS Recovery
- LCS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 0 results (0.00%) out of the 9 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Reported as part of SDG SN7404.

Analytical Method	Data Reviewer Comment
M8315A	No additional comments; see Checklist for detail.

Jim Tomalia

January 12, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method M8315A, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW14-A-SEP2020 (N)/ 410-13060-1		7.220	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW14-B-SEP2020 (N)/ 410-13060-2		7.210	< 3	< 6	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Qualified Results

No results associated with this sample delivery group required qualification.

Table of Results with Modified Qualifiers

Modified Qualifiers for test method M8315A

FieldSample ID	Type	Analyte	LOQ	Lab Result	ADR Result	Modified Result	Reason
NHFLA-MW14-A-SEP2020	N	1,1-Dimethylhydrazine	0.130	0.100 U	0.100 X	0.100 U	
NHFLA-MW14-A-SEP2020	N	Hydrazine	0.130	0.0500 U	0.0500 X	0.0500 U	
NHFLA-MW14-A-SEP2020	N	Methyl hydrazine	0.130	0.100 U	0.100 X	0.100 U	
NHFLA-MW14-B-SEP2020	N	1,1-Dimethylhydrazine	0.120	0.100 U	0.100 X	0.100 U	
NHFLA-MW14-B-SEP2020	N	Hydrazine	0.120	0.0500 U	0.0500 X	0.0500 U	
NHFLA-MW14-B-SEP2020	N	Methyl hydrazine	0.120	0.100 U	0.100 X	0.100 U	

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Guidance Document:	Nike BU 51/52 Quality Assurance Project Plan
Prime Contractor:	Seres-Arcadis JV
Project Manager:	Jennifer Singer
Contract Laboratory(ies):	Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA
Data Review Contractor:	CADENA LLC
Data Review Level:	S2AVEM
Primary Data Reviewer:	Jim Tomalia, Senior Environmental Compliance Specialist
Date Submitted:	January 12, 2021 - Resubmitted February 11, 2021 - correction to data review checklist narration - hold time.

Field Sample ID	Lab Sample ID	Matrix	Type/Type Code	M8315A
NHFLA-MW11-B-SEP2020	410-13530-1	Solid	Field Sample/N	X
NHFLA-MW11-C-SEP2020	410-13530-2	Solid	Field Sample/N	X
NHFLA-MW12-B-SEP2020	410-13530-3	Solid	Field Sample/N	X
NHFLA-EB12-SEP2020	410-13530-4	Water	Equipment Blank/EB	X

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-13530-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 12 results (100.00%) out of the 12 results (sample and field QC samples) reported are qualified based on review and 1 results (8.33%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Reported as part of SDG SN7436.

Analytical Method	Data Reviewer Comment
M8315A	No additional comments; see Checklist for detail.

Jim Tomalia

February 11, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method M8315A, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW11-B-SEP2020 (MS)/ 410-13530-1MS	Methyl hydrazine	19.61	29 - 187	10 - 187	percent	J/UJ	M	
NHFLA-MW11-B-SEP2020 (MS)/ 410-13530-1MS	Hydrazine	4.408	54 - 128	10 - 128	percent	J/X	M	
NHFLA-MW11-B-SEP2020 (MS)/ 410-13530-1MS	1,1-Dimethylhydrazine	76.97	86 - 124	10 - 124	percent	J/UJ	M	
NHFLA-MW11-B-SEP2020 (SD)/ 410-13530-1MSD	Hydrazine	5.629	54 - 128	10 - 128	percent	J/X	M	
NHFLA-MW11-B-SEP2020 (SD)/ 410-13530-1MSD	1,1-Dimethylhydrazine	83.44	86 - 124	10 - 124	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for M8315A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW11-B-SEP2020	N	1,1-Dimethylhydrazine	0.130	0.100 U J1	0.100 UJ		ng/g	H1/M
NHFLA-MW11-B-SEP2020	N	Hydrazine	0.130	0.0500 U J1	0.0500 X		ng/g	H1/M
NHFLA-MW11-B-SEP2020	N	Methyl hydrazine	0.130	0.100 U J1	0.100 UJ		ng/g	H1/M/D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method M8315A, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW11-B-SEP2020 (SD)/ 410-13530-1MSD	Methyl hydrazine	55.52	< 30	< 30	rpd	J/UJ	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS RPD for M8315A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW11-B-SEP2020	N	Methyl hydrazine	0.130	0.100 U J1	0.100 UJ		ng/g	H1/M/D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method M8315A, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-MW11-B-SEP2020 (N)/ 410-13530-1		12.25	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW11-B-SEP2020 (N)/ 410-13530-1MS		12.25	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW11-B-SEP2020 (N)/ 410-13530-1MSD		12.25	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW11-C-SEP2020 (N)/ 410-13530-2		12.24	< 3	< 6	days	J/X	H1	Test Exceeds UCL
NHFLA-MW12-B-SEP2020 (N)/ 410-13530-3		12.07	< 3	< 6	days	J/X	H1	Test Exceeds UCL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Test Hold Time for M8315A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-MW11-B-SEP2020	N	1,1-Dimethylhydrazine	0.130	0.100 U J1	0.100 UJ		ng/g	H1/M
NHFLA-MW11-B-SEP2020	N	Hydrazine	0.130	0.0500 U J1	0.0500 X		ng/g	H1/M
NHFLA-MW11-B-SEP2020	N	Methyl hydrazine	0.130	0.100 U J1	0.100 UJ		ng/g	H1/M/D
NHFLA-MW11-C-SEP2020	N	1,1-Dimethylhydrazine	0.120	0.100 U	0.100 UJ		ng/g	H1
NHFLA-MW11-C-SEP2020	N	Hydrazine	0.120	0.0500 U	0.0500 UJ		ng/g	H1
NHFLA-MW11-C-SEP2020	N	Methyl hydrazine	0.120	0.100 U	0.100 UJ		ng/g	H1
NHFLA-MW12-B-SEP2020	N	1,1-Dimethylhydrazine	0.130	0.100 U	0.100 UJ		ng/g	H1

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
M8315A/NONE/NONE	1	3

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
M8315A/NONE/NONE	NHFLA-EB12-SEP2020	EB	1	1,1-Dimethylhydrazine	0.630 UJ	0.310	0.630	1.00	0.8	ug/L
M8315A/NONE/NONE	NHFLA-EB12-SEP2020	EB	1	Hydrazine	0.500 UJ	0.130	0.500	0.630	0.5	ug/L
M8315A/NONE/NONE	NHFLA-EB12-SEP2020	EB	1	Methyl Hydrazine	0.630 UJ	0.310	0.630	1.00	0.8	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
D	MS RPD
H1	Test Hold Time
H2	Prep Hold Time
M	MS Recovery

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: M8315A (Determination of Hydrazine, Monomethylhydrazine, and 1,1- Dimethylhydrazine in Aqueous and Soil Samples by LC/MS/MS)

Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?		•		Samples -001, -002, -003 analyzed outside of 72 hour holding time and sample -004 prepped outside of 10 day hold time. All sample results qualified estimated with UJ flags.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 all target analyte MS/MSD recoveries biased low. Hydrazine recoveries below reject criteria. Monomethyl and dimethylhydrazine sample -001 results qualified estimated with UJ/M flags/reason codes and hydrazine results qualified rejected with X/M flag/reason code.
Was the MS/MSD RPD within project acceptance limits?		•		Sample -001 MS/MSD RPD outlier for monomethylhydrazine. Qualified with UJ/D flag/reason code.
Were surrogate recoveries within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?			•	
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?	•			Sample -001 hydrazine rejected due to MS recovery outliers.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2AVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Nike BU 51/52 Quality Assurance Project Plan and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Seres-Arcadis JV; analyses were performed by Eurofins Lancaster Laboratories Environmental, LLC, Lancaster, PA and were reported under sample delivery group (SDG) 410-14383-1_52_2a_FUDSChem. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Blank - Negative
- Equipment Blank
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Test Hold Time

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 3 results (16.67%) out of the 18 results (sample and field QC samples) reported are qualified based on review and 1 results (5.56%) have been rejected or deemed a serious deficiency. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Analytical Method	Data Reviewer Comment
M8315A	No additional comments; see Checklist for detail.

Jim Tomalia

January 13, 2021

Reviewed by Jim Tomalia, Senior Environmental Compliance Specialist, CADENA LLC

As the Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of a minimum of 10% of the reported sample results and method quality control data between the two deliverables.

Quality Control Outliers for test method M8315A, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-SL28-A-SEP2020 (MS)/ 410-14383-1MS	Hydrazine	2.937	54 - 128	10 - 128	percent	J/X	M	
NHFLA-SL28-A-SEP2020 (MS)/ 410-14383-1MS	Methyl hydrazine	22.91	29 - 187	10 - 187	percent	J/UJ	M	
NHFLA-SL28-A-SEP2020 (SD)/ 410-14383-1MSD	Methyl hydrazine	13.13	29 - 187	10 - 187	percent	J/UJ	M	
NHFLA-SL28-A-SEP2020 (SD)/ 410-14383-1MSD	Hydrazine	2.243	54 - 128	10 - 128	percent	J/X	M	
NHFLA-SL28-A-SEP2020 (SD)/ 410-14383-1MSD	1,1-Dimethylhydrazine	79.33	86 - 124	10 - 124	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for M8315A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-SL28-A-SEP2020	N	1,1-Dimethylhydrazine	0.120	0.0990 U FL	0.0990 UJ		ng/g	M
NHFLA-SL28-A-SEP2020	N	Hydrazine	0.120	0.0500 U FL	0.0500 X		ng/g	M
NHFLA-SL28-A-SEP2020	N	Methyl hydrazine	0.120	0.0990 U FL F	0.0990 UJ		ng/g	M/D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method M8315A, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-SL28-A-SEP2020 (SD)/ 410-14383-1MSD	Methyl hydrazine	54.88	< 30	< 30	rpd	J/UJ	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS RPD for M8315A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-SL28-A-SEP2020	N	Methyl hydrazine	0.120	0.0990 U FL F	0.0990 UJ		ng/g	M/D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method M8315A, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
NHFLA-DUP10-SEP2020 (FD)/ 410-14383-3		5.580	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL
NHFLA-SL26-A-SEP2020 (N)/ 410-14383-5		5.550	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL
NHFLA-SL27-A-SEP2020 (N)/ 410-14383-4		5.560	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL
NHFLA-SL28-A-SEP2020 (N)/ 410-14383-1		5.570	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL
NHFLA-SL28-A-SEP2020 (N)/ 410-14383-1MS		5.570	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL
NHFLA-SL28-A-SEP2020 (N)/ 410-14383-1MSD		5.570	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL
NHFLA-SL31-A-SEP2020 (N)/ 410-14383-2		5.570	< 3	< 6	days	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Table of All Qualified Results

Test Method: M8315A Extraction Method: NONE								
FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
NHFLA-SL28-A-SEP2020	N	1,1-Dimethylhydrazine	0.120	0.0990 U FL	0.0990 UJ		ng/g	M
NHFLA-SL28-A-SEP2020	N	Hydrazine	0.120	0.0500 U FL	0.0500 X		ng/g	M
NHFLA-SL28-A-SEP2020	N	Methyl hydrazine	0.120	0.0990 U FL F	0.0990 UJ		ng/g	M/D

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Table of Results with Modified Qualifiers

Anomalies Count

Test/Extraction Method/Leach	Field Samples Outside of Compliance	Analytes Outside of Compliance
M8315A/NONE/NONE	1	3

Anomalies are cases where the reported RL exceeds that specified in the governing project document.

Reporting Anomalies

Test Leach	FieldSample ID	Type	Dilution	Analyte	Result	DL	LOD	LOQ/RL	Project RL	Units
M8315A/NONE/NONE	NHFLA-EB17-SEP2020	EB	1	1,1-Dimethylhydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L
M8315A/NONE/NONE	NHFLA-EB17-SEP2020	EB	1	Hydrazine	0.500 U	0.130	0.500	0.630	0.5	ug/L
M8315A/NONE/NONE	NHFLA-EB17-SEP2020	EB	1	Methyl Hydrazine	0.630 U	0.310	0.630	1.00	0.8	ug/L

Reporting Anomalies are cases where the laboratory quantitation limit (LOQ or RL) exceeds the Project Quantitation Limit Goal or Reporting Limt specified in the governing project document.

Reason Code Definitions

Code	Definition
D	MS RPD
H1	Test Hold Time
M	MS Recovery
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
B	Blank contamination: The analyte was found in an associated blank above one half the RL, as well as in the sample.
UB	The analyte was also detected in an associated laboratory or field blank at a concentration comparable to the concentration in the sample. The reported result has been requalified as not detected.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

Review Questions

Method: M8315A (Determination of Hydrazine, Monomethylhydrazine, and 1,1- Dimethylhydrazine in Aqueous and Soil Samples by LC/MS/MS)				
Review Questions	Yes	No	NA	Comment
Did Chain-of-Custody information agree with laboratory report and EDD for requested field samples and tests?	•			
Were samples preserved properly and received in good condition?	•			
Were holding times met?	•			H1 flags removed. All prep and testing hold times were within project criteria.
Were all requested target analytes reported?	•			
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than MDL?	•			
Were target analytes in the field blank less than MDL?			•	
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		Sample -001 MS/MSD recoveries were outliers biased low and below the lower reject criteria for hydrazine so were qualified with X/M flags/reason codes. Recoveries were also biased low but above reject criteria for monomethylhydrazine and 1,1-dimethylhydrazine so were qualified estimated with UJ/M flags/reason codes.
Was the MS/MSD RPD within project acceptance limits?		•		MS/MSD RPD for sample -001 monomethyhydrazine was an outlier so result was qualified with a D reason code.
Were surrogate recoveries within project acceptance limits?			•	
Was the laboratory duplicate RPD within project acceptance limits?			•	
If a field duplicate was analyzed, were the RPDs within QAPP acceptance limits?	•			
Were QAPP specified laboratory PQLs achieved?	•			Unless otherwise noted in specified in anomaly outlier summary
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data rejected during the verification process?	•			Hydrazine result for client sample -001 due to MS recovery outliers.

Suite 600
Buffalo,NY 14202

RE: Katahdin Lab Number: SN8671
Project ID: Nike BU 51/52 Hamburg, NY
Project Manager: Ms. Heather Manz
Sample Receipt Date(s): October 16, 2020

Dear Ms. Singer:

Please find enclosed the following information:

* Report of Analysis (Analytical and/or Field)
* Quality Control Data Summary
* Chain of Custody (COC)
* Login Report

A copy of the Chain of Custody is included in the paginated report. If requested, the original COC is attached as an addendum to this report.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact the project manager listed above. The results contained in this report relate only to the submitted samples. This cover letter is an integral part of the ROA.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in an attached technical narrative or in the Report of Analysis.

We appreciate your continued use of our laboratory and look forward to working with you in the future. The following signature indicates technical review and acceptance of the data.

Please go to http://www.katahdinlab.com/cert for copies of Katahdin Analytical Services Inc. current certificates and analyte lists.

Sincerely,
KATAHDIN ANALYTICAL SERVICES

Leslie Dimond

NARRATIVE
KATAHDIN ANALYTICAL SERVICES
ARCADIS
NIKE BU 51/52 HAMBURG, NY
SN8671

Sample Receipt

The following samples were received on October 16, 2020 and were logged in under Katahdin Analytical Services work order number SN8671 for a hardcopy due date of November 04, 2020.

KATAHDIN Sample No.	ARCADIS Sample Identification
SN8671-1	NHFLA-WC-SOIL-OCT2020
SN8671-2	NHFLA-WC-WATER-OCT2020

The samples were logged in for the analyses specified on the chain of custody form. All problems encountered and resolved during sample receipt have been documented on the applicable chain of custody forms.

We certify that the test results provided in this report meet all the requirements of the NELAP standards unless otherwise noted in this narrative or in the Report of Analysis.

We certify that the test results provided in this report are accredited under the laboratory's ISO/IEC 17025:2005 and DoD-ELAP accreditation issued by the ANSI-ASQ National Accreditation Board. Refer to certificate and scope of accreditation L2223.

Analytes which are reported but not listed on our ANAB scope of accreditation will be "^" flagged and the following language will be included in the case narrative for all DoD compliant work: "^" Indicates this analyte is not included on Katahdin Analytical Services DoD-ELAP Scope of Accreditation.

Sample analyses have been performed by the methods as noted herein.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact your Katahdin Analytical Services Project Manager, **Ms. Heather Manz**. This narrative is an integral part of the Report of Analysis.

Organics Analysis

The samples of Work Order #SN8671 were analyzed in accordance with Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA publication SW-846, Third Edition, Final Updates I (1993), II (1995), IIA (1994), IIB (1995), III (1997), IIIA (1999), IIIB (2005), IV (2008), and V (2015), and/or for the specific methods listed below or on the Report of Analysis.

8260C TCLP Analysis

Method 1311 uses a sample aliquot of 25g for TCLP extraction of volatile compounds. Katahdin utilized a 10g sample aliquot for this analysis.

8270D TCLP Analysis

Samples SN8671-1 and 2 as well as the laboratory method blank WG288596-1 had low recoveries for one or two surrogates that were outside of the DoD QSM acceptance limits. The client was contacted on 10/26/20 regarding the surrogate deviations and the laboratory was advised to proceed with narration.

The independent check standard associated with the initial calibration on 10/16/2020 had a high concentration for the target analyte pentachlorophenol that exceeded the DoD QSM acceptance limit of ±20% of the expected value from the ICAL.

8081B TCLP Analysis

There were no protocol deviations or observation noted by the organics laboratory staff for this analysis.

8082A Analysis

Sample SN8671-1 was analyzed at a dilution of 1:5 due to matrix interference, sample viscosity or other matrix-related problem. Consequently, the sample PQL's was elevated by a factor of 5.

Sample SN8671-2 had low recoveries for the extraction surrogates TCX and DCB that were outside of the laboratory established acceptance limits. Based a notation in the extraction prep logbook about an emulsion occurring during the extraction, the deviations are likely attributable to a matrix effect. Therefore, no further action was taken.

8151A TCLP Analysis

There were no protocol deviations or observations noted by the organics laboratory staff for this analysis.

Metals Analysis

The samples of Katahdin Work Order SN8671 were prepared and analyzed for metals in accordance with Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, EPA publication SW-846, Third Edition, Final Updates I (1993), II (1995), IIA (1994), IIB (1995), III (1997), IIIA (1999), IIIB (2005), IV (2008), and V (2015), Office of Solid Waste and Emergency Response, U.S. EPA.

TCLP Extraction (EPA Method 1311)

Katahdin Sample Numbers SN8671-1 is a solid sample that was subjected to TCLP extraction on 10/19/20 in accordance with USEPA Method 1311.

TCLP Fluid Blank PBT1659A is an aqueous sample that was subjected to TCLP extraction on 10/19/20 in accordance with USEPA Method 1311. This blank is associated with Katahdin Sample Number SN8671-1. The detected concentrations of barium (20.2 ug/L) and lead (3.363 ug/L)in this fluid blank are above laboratory acceptance criteria. Because the fluid blank and associated samples are well below regulatory limits, no action was taken.

The measured concentrations of contaminants in TCLP fluid blanks are listed in the Form 3P in the accompanying data package.

Inductively-Coupled Plasma Atomic Emission Spectroscopic Analysis (ICP)

Aqueous-matrix Katahdin Sample Number SN8671-(1-2) were digested for ICP analysis on 11/06/20 (QC Batch NK06ICW2) in accordance with USEPA Method 3010A. The laboratory control sample associated with this batch, LCSWNK06ICW2, was outside of acceptance criteria for lead. All associated samples were less than one half the PQL, so were accepted without action.

Aqueous-matrix TCLP fluid blank extract PBT1659A was digested for ICP analysis on 10/20/20 (QC Batch NJ20ICW1) in accordance with USEPA Method 3010A.

ICP analyses of Katahdin Work Order SN8671 sample digestates were performed using a Thermo iCAP 6500 ICP spectrometer in accordance with USEPA Method 6010C. All samples were analyzed within holding times and all analytical run QC criteria were met with the following exception;

CCB run at 20:09 in analytical batch INJ20B was outside the acceptance criteria for selenium. Because all associated samples were either above ten times the failed value or below one-half the PQL, they were accepted without corrective action.

Analysis of Mercury by Cold Vapor Atomic Absorption (CVAA)

Aqueous-matrix Katahdin Sample Numbers SN8671-(1-2) were digested for mercury analysis on 10/23/20 (QC Batch NJ23HGW1) in accordance with USEPA Method 7470A. This batch was prepared with duplicate laboratory control samples.

Aqueous-matrix TCLP fluid blank extract PBT1659A was digested for mercury analysis on 10/20/20 (QC Batch NJ20HGW1) in accordance with USEPA Method 7470A. All samples were analyzed within holding times and all analytical run QC criteria were met

Mercury analyses of the Katahdin Work Order SN8671 sample digestates were performed using a Cetac M6100 automated mercury analyzer in accordance with USEPA Methods 7470A. All samples were analyzed within holding times and all analytical run QC criteria were met.

Reporting of Metals Results

Per client request, analytical results for client samples on Form I and preparation blanks on Form IIIP have been reported using the laboratory's limits of detection (LOD). All results were evaluated down to the laboratory's method detection limits (MDLs). Results that fall between the MDL and the LOQ are

flagged with "J" in the C-qualifier column, and the measured concentration appears in the concentration column. Results that are less than the MDL are flagged with "U" in the C-qualifier column, and the LOD is listed in the concentration column. These LOQs, MDLs and LODs have been adjusted for each sample based on the sample amounts used in preparation and analysis.

Analytical results on Forms VA, VD, VII, and IX for client samples, matrix QC samples (duplicates and matrix spikes), and laboratory control samples have been reported down to the laboratory's method detection limits (MDLs). Analytical results that are below the MDLs are flagged with "U" in the C-qualifier column, and the measured concentration is listed in the concentration column.

Analytical results for instrument run QC samples (ICVs, ICBs, etc.) have been reported down to the laboratory's instrument detection limits (IDLs).

IDLs, LODs, MDLs, and LOQs are listed on Form 10 of the accompanying data package.

Wet Chemistry Analysis

The samples of Work Order SN8671 were analyzed in accordance with the specific methods listed on the Report of Analysis.

Analyses for reactive cyanide, ignitability, reactive sulfide, Ph, and total solids were performed according to "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", EPA publication SW-846, Third Edition, Final Updates I (1993), II (1995), IIA (1994), IIB (1995), III (1997), IIIA (1999), IIIB (2005), IV (2008), and V (2015).

All Wet Chemistry results were evaluated to Katahdin Analytical Services' Method Detection Limits (MDL). Measured concentrations that fall between the MDL and Katahdin's Limit of Quantitation (LOQ) are flagged "J". Measured concentrations that are below the MDL are flagged "U" and reported as "U LOD", where "LOD" is the numerical value of the Limit of Detection.

All analyses were performed within analytical holding times, and all quality control criteria were met.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Quality Assurance Officer, or their designee, as verified by the following signature.

Leslie Dimond 12.3.20

Leslie Dimond
Quality Assurance Officer

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U — Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL, "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

* — Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D — Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E — Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J — Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

or

J — Used for Pesticides, PCBs, Herbicides, Formaldehyde, Explosives and Method 504.1 analytes when there is a greater than 40% difference for detected concentrations between the two GC columns.

B — Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

C — Indicates that the flagged compound did not meet DoD criteria in the corresponding daily calibration verification (CV).

L — Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M — Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike and/or Matrix Spike Duplicate prepared and/or analyzed concurrently with the native sample.

N — Presumptive evidence of a compound based on a mass spectral library search.

A — Indicates that a tentatively identified compound is a suspected aldol-condensation product.

P — Used for Pesticide/Aroclor analyte when there is a greater than 25% difference for detected concentrations between the two GC columns. (for CLP methods only).

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 Please refer to cover letter or narrative for further information.

H_ Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

Sample Receipt Condition Report

Client:	Arcadis	KAS PM:	HMM	Sampled By:	Client
Project:		KIMS Entry By:	JCB	Delivered By:	Fedex
KAS Work Order#:	SN8671	KIMS Review By:	HMM	Received By:	JCB
		Labeled By:	JCB		
SDG #:		Cooler: 1 of 1		Date/Time Rec.:	10/16/20 0930

Receipt Criteria	Y	N	EX*	NA	Comments and/or Resolution
1. Custody seals present / intact?	✓				
2. Chain of Custody present in cooler?	✓				
3. Chain of Custody signed by client?	✓				
4. Chain of Custody matches samples?	✓				
5. Temperature Blanks present? If not, take temperature of any sample w/ IR gun.	✓				Temp (°C): 2.7 — Thermometer ID: IR-1
Samples received at <6 °C w/o freezing?	✓				Note: Not required for metals (except Hg soil) analysis.
Ice packs or ice present?	✓				The lack of ice or ice packs (i.e. no attempt to begin cooling process) or insufficient ice may not meet certain regulatory requirements and may invalidate certain data.
If yes, was there sufficient ice to meet temperature requirements?	✓				
If temp. out, has the cooling process begun (i.e. ice or packs present) and sample collection times <6hrs., but samples are not yet cool?				✓	Note: No cooling process required for metals (except Hg soil) analysis.
6. Volatiles: **Aqueous:** No bubble larger than a pea?	✓				
Soil/Sediment:					
Received in airtight container?				✓	
Received in methanol?				✓	
Methanol covering soil?				✓	
D.I. Water - Received within 48 hour HT?				✓	
7. Trip Blank present in cooler?				✓	
8. Proper sample containers and volume?		X			HCl VOA and HNO_3 metals – but this is for TCLP
9. Samples within hold time upon receipt?	✓				
10. Aqueous samples properly preserved? Metals, COD, NH3, TKN, O/G, phenol, TPO4, N+N, TOC, DRO, TPH – pH <2	✓				
Sulfide - >9				✓	
Cyanide – pH >12				✓	
11. Bottleware Prepped on:					

* Log-In Notes to Exceptions: document any problems with samples or discrepancies or pH adjustments.

You can take it from the ambers, there should be enough volume. I included both because I wasn't sure what you needed.

Subject: TCLP Nike samples received today

Hello,

The TCLP VOA vials we received today are preserved with HCL. TCLP samples need to be unpreserved. Would you like us to analyze TCLP VOA from one of the amber bottles received? I'm not sure if the ambers were received without headspace or not.

Thank You,
Heather Manz

❑ See Attached

DESCRIPTION	RATE	MINIMUM
Chaffee Landfill		
Treatment Method Direct Landfill	$85.00 / Drum	
Transportation Trip	$220.00 / Hour	8 Hour
Transportation Demurrage	$105.00 / Hour	/ after one free hour
Additional Services Labor	$85.00 / Hour	/ per person
Tax State Tax	8.75 %	/ of the Total Invoice

Other services not listed above will incur additional charges that vary by location and are subject to change without notice. Payment of invoice represents agreement of such charges.

PLEASE REVIEW SECTION F WHICH CONTAINS IMPORTANT COMMENTS REGARDING YOUR WASTE STREAM.

F. COMMENTS ❑ See Attached

• Waste Management reserves the right to refuse any load or discontinue any waste stream should such waste pose a threat to human health or safety, prove to be operationally challenging, or is in violation of any WM permit.

• All loads must be accompanied by proper shipping paper.

• If Waste Management (WM) received authorization to make changes to your waste profile during the approval process, your acceptance and execution of this Exhibit A confirms the accuracy of the changes.

• If WM (or a WM contracted hauler) is not providing the transportation services, you must ensure that the transporter is licensed and approved to haul the Special Waste and/or Hazardous Waste. All Third Party Transporters must comply with WM Safety requirements and procedures (hard hat, safety glasses, steel-toe boots, and safety vest). If transporting to a CWM facility, a Tyvek suit and respirator are also required.

• Prices quoted herein are valid for 30 days. Unless Waste Management is hired for this project prior to the expiration of this 30 day period in which case pricing remains valid in accordance with the terms of the Service Agreement.

• Pricing is based on the information provided on your profile and the representative data previously submitted. Charges incurred for additional services not listed above will be subject to standard rates and payment of the invoice represents mutual agreement of those charges.

• The fuel surcharge percentage can fluctuate on a weekly basis; www.wm.com/fec.jsp provides the current Fuel Surcharge and DOE average. The actual percentage rate applied to the total project invoice will be determined on the date the load was received.

• Please see profile approval form for special handling instructions. Additional special terms and conditions may be defined on your original quotation.

The work contemplated by this Exhibit A is to be done in accordance with the terms and conditions of the Industrial Waste & Disposal Services Agreement or other contractual agreement between the parties dated: 07/10/2020

YOUR ACCEPTANCE OF THESE TERMS CREATES A BINDING AGREEMENT AS FOLLOWS: (I) TYPE OR SIGN YOUR NAME AND TITLE WHERE INDICATED BELOW OR (II) YOUR TENDER OR DELIVERY TO COMPANY OF THE INDUSTRIAL WASTE DESCRIBED IN THE COMPANY APPROVED PROFILE SHEET AND (IF APPLICABLE) CONFIRMATION LETTER SHALL CONSTITUTE YOUR ACCEPTANCE OF THESE TERMS WITHOUT YOUR SIGNATURE.

Appendix I

Risk Assessment Guidance for Superfund (RAGS) Part D Tables and ProUCL Output

RAGS Part D Planning Table 1
Selection of Human Exposure Pathways
Baseline Human Health Risk Assessment
Nike Antiaircraft Missile Battery BU-51/52
Town of Hamburg, Erie County, New York

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Human Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway
Current / Most Likely Future [a]	On-site Soil	Surface Soil (0-1 ft bgs)	Former Launch Area	Indoor Commercial / Industrial Worker	Adult	Incidental Ingestion	Quantitative	The former Launch Area at the Nike Antiaircraft Missile Battery BU-51/52 (Site) is currently used by the Town of Hamburg's Highway Department for storage, office space, and maintenance. Surface soil (0-1 ft bgs) could be contacted by commercial/industrial workers (indoor workers) at the Site.
						Dermal Contact	None [d]	
						Inhalation (VOCs and Dust)	Quantitative	
				Outdoor Maintenance Worker	Adult	Incidental Ingestion	Quantitative	Surface soil (0-1 ft bgs) could be contacted by maintenance workers who primarily work outdoors at the Site (e.g., Highway Department workers).
						Dermal Contact	Quantitative	
						Inhalation (VOCs and Dust)	Quantitative	
		Surface and Subsurface Soil (0-10 ft bgs)	Former Launch Area	Construction / Utility Worker	Adult	Incidental Ingestion	Quantitative	In the event of intrusive work at the Site, surface and subsurface soils (0-10 ft bgs) could be contacted by construction or utility workers.
						Dermal Contact	Quantitative	
						Inhalation (VOCs and Dust)	Quantitative	
	Groundwater	On-site Aquifer Groundwater	Tapwater	Indoor Commercial / Industrial Worker	Adult	Ingestion	None	Potable water is supplied to the Site by the Erie County Water Authority; therefore, this exposure pathway is currently incomplete.
						Dermal Contact	None	
						Inhalation (VOCs)	None	
		On-site Shallow Groundwater	Indoor Air of on-site Buildings	Indoor Commercial / Industrial Worker	Adult	Inhalation (VOCs)	Quantitative	Commercial/industrial workers (indoor workers) could be exposed to VOCs, if present in underlying groundwater, that migrate from shallow groundwater to indoor air of on-site buildings.
			Excavation / Trench for Utility Work	Construction / Utility Worker	Adult	Incidental Ingestion	Quantitative	Groundwater at the Site is approximately 4 to 10 ft bgs in the overburden and flows south toward Eighteen Mile Creek. Given the shallow depth to groundwater, construction or utility workers may contact shallow groundwater that infiltrates the bottom of an excavation.
						Dermal Contact	Quantitative	
						Inhalation (VOCs)	Quantitative	
		Off-site Aquifer Groundwater	Tapwater in Nearby Residence	Resident	Adult	Ingestion	None	Potable water is currently supplied to nearby residences by the Erie County Water Authority; therefore, this exposure pathway is currently incomplete.
						Dermal Contact	None	
						Inhalation (VOCs)	None	
					Child [c]	Ingestion	None	
						Dermal Contact	None	
						Inhalation (VOCs)	None	
		Off-site Shallow Groundwater	Indoor Air of Nearby Residence	Resident	Adult	Inhalation (VOCs)	Quantitative	Nearby residents could be exposed to VOCs, if present in underlying groundwater, that migrate from shallow groundwater to indoor air of off-site residences.
					Child	Inhalation (VOCs)	Quantitative	

RAGS Part D Planning Table 1
Selection of Human Exposure Pathways
Baseline Human Health Risk Assessment
Nike Antiaircraft Missile Battery BU-51/52
Town of Hamburg, Erie County, New York

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Human Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway
Hypothetical Future [b]	On-site Soil	Surface and Subsurface Soil (0-10 ft bgs)	Former Launch Area	Future Resident	Adult	Incidental Ingestion	None	Residential use is not considered a reasonable future use of the Site based on the current land use and land ownership, and proximity to the Hamburg Landfill.
						Dermal contact	None	
						Inhalation (Dust)	None	
					Child	Incidental Ingestion	None	
						Dermal contact	None	
						Inhalation (Dust)	None	
	Groundwater	On-site Aquifer Groundwater	Tapwater in on-site Buildings	Indoor Commercial / Industrial Worker	Adult	Ingestion	Quantitative	Although this exposure pathway is currently incomplete, there are no restrictions that would limit future use of the surficial aquifer as a drinking water source.
						Dermal Contact	Quantitative	
						Inhalation (VOCs)	Quantitative	
			Tapwater in Future on-site Residence	Future Resident	Adult	Ingestion	None	Residential use is not considered a reasonable future use of the Site based on the current land use and land ownership, and proximity to the Hamburg Landfill.
						Dermal Contact	None	
						Inhalation (VOCs)	None	
					Child	Ingestion	None	
						Dermal Contact	None	
						Inhalation (VOCs)	None	
		On-site Shallow Groundwater	Indoor Air of Future on-site Residence	Future Resident	Adult	Inhalation (VOCs)	None	Residential use is not considered a reasonable future use of the Site based on the current land use and land ownership, and proximity to the Hamburg Landfill.
					Child	Inhalation (VOCs)	None	
		Off-site Aquifer Groundwater	Tapwater in Nearby Residence	Resident	Adult	Ingestion	Quantitative	Although this exposure pathway is currently incomplete, there are no restrictions that would limit future use of the surficial aquifer as a drinking water source.
						Dermal Contact	Quantitative	
						Inhalation (VOCs)	Quantitative	
					Child	Ingestion	Quantitative	
						Dermal Contact	Quantitative	
						Inhalation (VOCs)	Quantitative	

Notes:
[a] The Current / Most Likely Future scenario considers the current and most likely future land use of the former Launch Area as an industrial site owned by the Town of Hamburg and used by the Highway Department for storage, office space, and maintenance.
[b] The Hypothetical Future scenario considers an additional potential exposure scenario in which the surficial aquifer is used as a drinking water source.
[c] A child is defined as 0 to 6 years of age.
[d] Per current USEPA guidance (USEPA 2021a), the dermal exposure route is not evaluated for indoor commercial/industrial workers.

ft bgs - feet below ground surface.
RAGS - Risk Assessment Guidance for Superfund.
VOCs - volatile organic constituents.
USEPA - United States Environmental Protection Agency.

	7440-66-6	Zinc	51	631	mg/kg	NHFLA-MW7OB-A	22 / 22	N/A	631	255	2,300	n	N	BSC

Notes:

(1) Sample IDs contain "A" to designate surface interval (0 to 1 ft bgs), "B" to designate first subsurface interval (generally 1 to 3 ft bgs), and "C" to designate second subsurface interval (various depths).

(2) Maximum concentration.

(3) Reference values are background threshold values (BTVs) calculated from reference soil sample data (see Appendix I). Where BTVs are not available because constituents were not detected in the reference soil samples, the reference values are New York State (NYS) background values for source-distant samples collected as part of rural soil survey (NYSDEC, 2005).

(4) The screening toxicity value is the United States Environmental Protection Agency (EPA) Regional Screening Level (RSL) for Residential Soil (EPA, May 2021). EPA RSLs are concentrations associated with (c) a cancer risk level of 1×10^{-6} or (n) a non-cancer hazard quotient (HQ) of 0.1 to account for cumulative risk from exposure to multiple constituents.

(5) Codes used for the "Rationale for Selection or Deletion":

ASC - Above Screening Criterion
BSC - Below Screening Criterion
<BTV - Less Than Background Threshold Value
Hyp. Test - Hypothesis testing indicates site data set is less than or equal to the background data set (see Appendix I).

(6) Screening level for fluorene was used as surrogate for carbazole.

(7) Screening level for pyrene was used as surrogate for acenaphthylene, benzo(g,h,i)perylene and phenanthrene.

(8) Screening level is for chromium III.

(9) Screening level is for mercuric chloride.

CASRN = Chemical Abstracts Service Registry Number.
ft bgs = feet below ground surface.
LOD = limit of detection.
µg/kg = microgram(s) per kilogram.
mg/kg = milligram(s) per kilogram.
N/A or "--" = not applicable.
NA = not available.

Notes:
(1) Sample IDs contain "A" to designate surface interval (0 to 1 ft bgs), "B" to designate first subsurface interval (generally 1 to 3 ft bgs), and "C" to designate second subsurface interval (various depths).
(2) Maximum concentration.
(3) Reference values are background threshold values (BTVs) calculated from reference soil sample data (see Appendix I). Where BTVs are not available because constituents were not detected in the reference soil samples, the reference values are New York State (NYS) background values for source-distant samples collected as part of rural soil survey (NYSDEC, 2005).
(4) The screening toxicity value is the United States Environmental Protection Agency (EPA) Regional Screening Level (RSL) for Residential Soil (EPA, May 2021). EPA RSLs are concentrations associated with (c) a cancer risk level of 1×10^{-6} or (n) a non-cancer hazard quotient (HQ) of 0.1 to account for cumulative risk from exposure to multiple constituents.
(5) Codes used for the "Rationale for Selection or Deletion":
ASC - Above Screening Criterion
BSC - Below Screening Criterion
<BTV - Less Than Background Threshold Value
Hyp. Test - Hypothesis testing indicates site data set is less than or equal to the background data set (see Appendix I).
(6) Screening level is for m-xylenes.
(7) Screening level is for cyclohexane.
(8) Screening level for fluorene was used as surrogate for carbazole.
(9) Screening level for pyrene was used as surrogate for acenaphthylene, benzo(g,h,i)perylene and phenanthrene.
(10) Screening level is for chromium III.
(11) Screening level is for mercuric chloride.

CASRN = Chemical Abstracts Service Registry Number.
ft bgs = feet below ground surface.
LOD = limit of detection.
µg/kg = microgram(s) per kilogram.
mg/kg = milligram(s) per kilogram.
N/A or "--" = not applicable.
NA = not available.

Notes:
(1) Maximum concentration.
(2) Background values are maximum detected concentrations in upgradient well MW-16.
(3) The screening toxicity value is the United States Environmental Protection Agency (EPA) Regional Screening Level (RSL) for Tapwater (EPA, May 2021). The EPA RSLs are based on either a target cancer risk of $1x10^{-6}$ or a noncancer hazard quotient (HQ) of 0.1.
(4) Codes used for the "Rationale for Selection or Deletion":
ASC - Above Screening Criterion
BSC - Below Screening Criterion
NSC - No Screening Criterion
< BG - Maximum concentration is less than the background value.
(5) Screening level is for m-xylenes.
(6) Screening level is for cyclohexane.
(7) Screening level for pyrene was used as surrogate for benzo(g,h,i)perylene and phenanthrene.
(8) Screening level is for chromium III.
(9) Screening level is for mercuric chloride.

CASRN = Chemical Abstracts Service Registry Number.
µg/L = microgram(s) per liter.
NA = not applicable.

Notes:

(1) Maximum concentration.

(2) The screening toxicity value is the United States Environmental Protection Agency (EPA) Vapor Intrusion Screening Level (VISL) for Residential exposure scenario. VISLs are based on either a target cancer risk of 1×10^{-6} or a noncancer hazard quotient (HQ) of 0.1 to account for cumulative risk from exposure to multiple constituents.

(3) Codes used for the "Rationale for Selection or Deletion":
ASC - Above Screening Criterion
BSC - Below Screening Criterion

(4) Screening level is for m-xylenes.

CASRN = Chemical Abstracts Service Registry Number.

µg/L = microgram(s) per liter.

NA = not applicable.

Worksheet 4-1
Calculation of Site-Specific Particulate Emission Factor for Soil Invasive Activities
Baseline Human Health Risk Assessment
Nike Antiaircraft Missile Battery BU-51/52
Town of Hamburg, Erie County, New York

Model Equation [1]

$$PEF_{sc} = Q/C_{sr} \; x \; \frac{1}{F_D} x \left[\frac{T \; x \; A_R}{556 \; x \; \left(\frac{W}{3}\right)^{0.4} \; x \; \frac{(365 \; d/yr - p)}{365 \; d/yr} \; x \; \sum VKT} \right]$$

where:

$$Q/C_{sr} = A \; x \; exp \left[\frac{(lnA_s - B)^2}{C} \right]$$

Parameters	Symbol	Units	Value	Notes
Subchronic Particulate Emission Factor for unpaved road traffic	PEF_{sc}	m^3/kg	3.86E+07	calc
Inverse of the ratio of the geometric mean air concentration to the emission flux	Q/C_{sr}	g/m^2-s per kg/m^3	16.44	calc
Duration of exposure	T	seconds	3.2E+07	[2]
Constant A	A	unitless	12.9351	[3]
Constant B	B	unitless	5.7383	[3]
Constant C	C	unitless	71.7711	[3]
Areal extent of site surface soil contamination	A_s	acres	5	[4]
Dispersion correction factor	F_D	unitless	0.186	[5]
Surface area of road segment in impacted area	A_R	m^2	857.93	calc
Length of road segment	L_R	m	140.74	[6]
Width of road segment	W_R	m	6.096	[7]
Mean vehicle weight	W	tons	16.5	[8]
Number of days with at least 0.01 inches of precipitation	p	days/year	150	[9]
Sum of fleet vehicle kilometers traveled during the exposure duration	ΣVKT	km	95.62	[10]

Notes:

g/m^2-s per kg/m^3 = grams per square meter-second per kilogram per cubic meter.

km = kilometers.

m = meters.

m^2 = square meters.

m^3/kg = cubic meters per kilogram.

[1] Subchronic particulate emission factor (PEF_{sc}) equation is Equation E-18 from USEPA 2002.

[2] The duration of construction is assumed to be 1 year.

[3] Default values from Equation E-19 from USEPA 2002.

[4] The areal extent of contamination was set equal to the area (19,807 m^2) of the Former Launch Area.

[5] Dispersion correction factor equation is Equation E-16 from USEPA 2002.

[6] The length of road segment was set equal to the square root of the area (19,807 m^2) of the Former Launch Area.

[7] Default value (20 feet) in Equation E-18 from USEPA 2002.

[8] Assumes a Class 8 truck with a gross vehicle weight rating of more than 33,000 pounds (e.g., tractor trailer).

[9] Value used for Buffalo, New York, shown in Exhibit E-4 in USEPA 2002.

[10] The sum of kilometers traveled was estimated assuming five vehicles traveling a road equivalent to the estimated lengths and widths of the road at the Site twice per day for 65 days per year (5 × 0.1471 km/day × 2 times/day × 65 days).

	--	--	--	--
	--	--	--	--
	--	--	--	--
	--	--	--	1.39E-04

Note:
1. DA Factors shown here are multiplied by the EPC (mg/L) to arrive at DA event (mg/cm^2-event).
2. For mutagens (M), the event duration values presented for resident adults are based on mutagenic, age-adjusted exposure time (0.6708 hours per event).

Per USEPA 2004, DA Factor (L/cm^2-event) is calculated as follows:

For inorganic constituents, DA Factor (L/cm^2-event) = Kp × t-event × CF

For organic constituents, if t-event < t*, then: DA Factor (L/cm^2-event) = 2FA × Kp × CF × SQRT[(6 × τ-event × t-event)/π]

For organic constituents, if t-event > t*, then: DA Factor (L/cm^2-event) = FA × Kp × CF × [(t-event/(1 + B)) + 2 × τ-event × ((1 + (3 × B) + (3 × B × B))/(1 + B)^2)]

Mass Transfer Coefficient Parameters

Default input parameters, as presented in the table beneath, were used.

Parameter	Unit	Value	
MWH_20	g/mol	18.02	Molecular weight of water.
MWO_2	g/mol	32.00	Molecular weight of oxygen.
kL,O_2	cm/sec	0.002	Liquid-phase mass transfer coefficient of oxygen at 25°C.
kG,H_2O	cm/sec	0.833	Gas-phase mass transfer coefficient of water vapor at 25°C.
R	atm-m³/mol-K	0.000082	Ideal gas constant.
Tgw	°C	17.0	Temperature of groundwater (site-specific value).
T	°K	290.15	Average system absolute temperature.

Trench Model Input Parameters:

Default input parameters, as presented in the table beneath, were used.

Parameter	Unit	Value	
A	m^2	2.23	Area of trench (length × width). Assumed to be 3 feet wide and 8 feet long (VDEQ 2018 default).
F	unitless	1	Fraction of trench floor through which contaminant can enter (VDEQ 2018 default).
V	m^3	4.08	Volume of trench (area × depth) (VDEQ 2018 default).
ACH	h^{-1}	2	Air changes per hour (VDEQ 2018 default).
D_{Trench}	m	1.8288	Depth of trench which is equal to the depth of groundwater (6 feet).

Abbreviations:

atm-m³/mol	Atmosphere per meter cubed per mole.	g/mol	Gram per mole.	m	meter.
°C	Degrees Celsius.	h^{-1}	Inverse hour.	m^2	Square meter.
cal/mol	Calories per mol.	°K	Degrees Kelvin.	m^3	Cubic meter.
cm/sec	Centimeter per second.	L/m^3	Liter per cubic meter.		

Notes:

[a] Constituent-specific parameters were obtained from the Chemical Specific Parameters Table from the Regional Screening Level Table (USEPA 2020a).
[b] Enthalpy of vaporization and Henry's Law Constant were adjusted for soil temperature based on USEPA recommended methods (USEPA 2001c).
[c] Volatilization factors for water in a trench were calculated using Virginia Department of Environmental Quality trench model (VDEQ 2019).

Notes:
(1) Gastrointestinal absorption efficiencies are from RAGS Part E, Exhibit 4-1 (USEPA, 2004).
(2) Dermal RfD was obtained by multiplying the oral RfD by the gastrointestinal absorption efficiency.
* The chronic RfD for TCE was selected from multiple effects/studies. Uncertainty factors of 10, 100 and 1,000 were used in the supporting studies for three candidate RfDs.
NA = not available.
-- = not applicable.

Hierarchy of Sources:
IRIS = Integrated Risk Information System (USEPA, 2021d).
PPRTV = Provisional Peer-Reviewed Toxicity Value (USEPA, 2021e).
CalEPA = California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (http://oehha.ca.gov/tcdb/index.asp).
ATSDR = Agency for Toxic Substances and Disease Registry, Minimal Risk Level (ATSDR, March 2021).
SCREEN = National Center for Environmental Assessment, Provisional Peer-Reviewed Toxicity Value appendix screening toxicity value (USEPA, 2021e).
HEAST = Health Effects Assessment Summary Tables (USEPA, 1997a).

Background Data Evaluation: BTVs and Hypothesis Tests

Appendix J

Background Soil Data Evaluation

1. Introduction

This Background Soil Data Evaluation is an appendix to the Remedial Investigation (RI) Report prepared by the Seres-Arcadis 8(a) JV, LLC (JV) on behalf of the United States Army Corps of Engineers (USACE), and evaluates the background soil data for the Nike Anti-aircraft Missile Battery BU-51/52 (Nike Battery), located in Hamburg, Erie County, New York (Nike Battery). The background evaluation calculates site-specific background threshold values (BTVs) and compares site soil data to reference (background) soil data. This information is used in the RI Report to aid in the identification of constituents of potential concern (COPCs) and inform the remedial decision process.

The background evaluation is based on the results from the 2020 RI sampling, which included the collection of both on-site and reference soil samples. The background evaluation focuses on metals and polycyclic aromatic hydrocarbons (PAHs). The evaluation includes soil data from two intervals: 0-1 foot below ground surface (bgs), and 1-3 feet bgs.

2. Background Threshold Values

BTVs were derived using reference soil data from the 0-1 foot and 1-3 feet bgs (**Table J-1**). BTVs were developed for those constituents with a minimum of eight samples and five detections; the minimum requirement to define a sample population (USEPA 2015). BTVs are typically represented by Upper Tolerance Limits (UTLs) calculated from a background dataset. Tolerance limits provide an interval within which at least a certain proportion of the population lies, with a specified probability that the stated interval does indeed "contain" that proportion of the population (USEPA, 2006). For example, a 95/95 UTL indicates a value that contains 95% of the population with 95% confidence. If insufficient data are available to calculate UTLs, the BTV is approximated by the maximum detected concentration in the background dataset.

Prior to calculating BTVs, several exploratory data analysis steps were used to identify suspected outliers and determine goodness-of-fit (GOF) for each data set (**Table J-2**). Suspected outliers were identified using the 75th percentile plus either 1.5 times the Interquartile Range (IQR – 75th – 25th percentiles) or 3 times the IQR. Mild suspected outliers were identified by the 75th percentile plus 1.5 times the IQR, while more extreme suspected outliers were identified by the 75th percentile plus 3 times the IQR. Suspected outliers were not excluded from BTV calculations.

GOF testing was also used to determine if parametric or nonparametric statistical methods are most appropriate for calculating BTVs and conducting statistical tests for outliers. Consistent with the USEPA (2015), data were evaluated for fits to normal, lognormal, and gamma distributions at an alpha level (α) of 0.05 (95% significance level). Optimal statistical tests were applied depending on distribution and sample size (n) (e.g., normal and lognormal: Shapiro-Wilk Test for $n \leq 50$ or Lilliefors Test for $n > 50$; gamma: Kolmogorov-Smirnov Test) using USEPA's (2015) ProUCL 5.1.002 software.

The criteria for selecting the most reliable method of UTL calculation, in accordance with USEPA (2015), depends on sample size, degree of censoring, GOF results, and skewness (as determined by the standard deviation of the natural logarithm of the detections) (**Table J-3**). The UTL was selected from among five possible methods: normal UTL, lognormal UTL, gamma UTL, KM UTL, or nonparametric UTL. It is not uncommon for one of the parametric UTLs to exceed the maximum detected concentration in the background dataset. This is more likely when the dataset is small and/or the variance is high. For this BTV evaluation, if the UTL exceeded the maximum detected concentration, then the maximum was retained as BTV for conservatism.

The nonparametric UTL usually equates to the maximum detected concentration when the dataset size is less than or equal to 59. With dataset sizes less than 59 members, 95% coverage at 95% confidence cannot be achieved (USEPA 2009, page 17-19). Unified Guidance provides a table (USEPA 2009, Table 17-4) with the actual achieved coverage at 95% confidence based on the dataset size. The results of the BTV derivations for each soil depth horizon (i.e., 0-1 foot and 1-3 feet bgs) are shown in **Table J-4a** and **Table J-4b**.

For comparison purposes, **Table J-4a** and **Table J-4b** also present the 95th percentile and maximum concentration from the New York State Department of Environmental Conservation (NYSDEC) rural soil survey (NYSDEC 2005). Comparison of the results indicate that the site-specific BTVs are generally comparable to the NYSDEC regional background values.

3. Data Box Plots and Hypothesis Testing

The background soil data evaluation includes box plots (**Figure J-1** and **Figure J-2**) and two-sample hypothesis tests (**Table J-5**) to compare the site soil data to reference soil data. The analyses focuses on the metals and PAHs with maximum detected concentrations greater than the regional screening level (RSLs) and the BTVs, as identified in the RI Report.

The hypothesis testing and box plots indicate that for surficial soil (0-1 feet bgs) five PAHs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene) and one metal (manganese) are statistically greater than background **(Table J-5**; **Figure J-1**). For subsurface soil (1-3 feet bgs) only two PAHs (benzo(a)pyrene, benzo(b)fluoranthene) and none of the metals are statistically greater than background **(Table J-5**; **Figure J-2**).

Appendix J
Table J-1. Background Soils Data
Remedial Investigation
Nike BU 51/52
Hamburg, NY

Notes:

[1] Sample IDs contain "A" to designate surface interval (0 to 1 ft bgs), "B" to designate first subsurface interval (generally 1 to 3 ft bgs), and "C" to designate second subsurface interval (various depths).

[2] Normal samples are indicated with "N" and field duplicate samples are indicated with "FD".

[3] Detected concentrations are bolded.

Acronyms and Abbreviations:
-- = not available.
µg/kg = micrograms per kilogram.
CASRN = Chemical Abstracts Service Registry Number.
ft = feet.
ft bgs = feet below ground surface.
LOD = limit of detection.
mg/kg = milligrams per kilogram.

Qualifier Definitions:
U = The analyte was not detected and was reported as less than the LOD.
J = The reported result was an estimated value.
R = The data validator flagged the data with “X” qualifiers due to significant QC deficiencies in the laboratory analysis of the samples. The project team performed data usability assessment and recommended these data to be rejected/ are not usable (“R” qualifiers)

Selenium	1-3	NHFLA-BH44	3.5	x	
Vanadium	0-1	NHFLA-BH49	64.6	x	
Zinc	1-3	NHFLA-BH39	366	x	

Abbreviations:
mg/kg = milligrams per kilogram
ug/kg = micrograms per kilogram
IQR = interquartile range
Perc. = percentile

Notes:

[1] Suspected outliers identified using the 75th percentile plus either 1.5 times the IQR (i.e., 75th - 25th percentiles) or 3.0 times the IQR. Mild suspected outliers correspond to 75th Perc. + 1.5 × IQR; while more extreme suspected outliers correspond to 75th Perc. + 3.0 × IQR.

Appendix J
Table J-3. Decision Tree for Statistic Used for the Background Threshold Values
Remedial Investigation
Nike BU 51/52
Hamburg, NY

Sample Size	Censoring	Distribution[1]	Skewness[2]	Statistic Used for Upper Bound UTL-based Threshold Value[3, 4]
n < 8	Detects < 8	NA	NA	Maximum detect
n ≥ 8	Detects < 5	NA	NA	Maximum detect
	Detects ≥ 5 ND = 0	N N and LN N and LN and G	NA	Normal 95/95 UTL
		LN	NA	Lognormal 95/95 UTL
		G LN and G	NA	minimum of WH Gamma 95/95 UTL or HW Gamma 95/95 UTL
		not N, LN, or G	NA	Nonparametric 95/95 UTL[4]
	Detects ≥ 5 ND > 0	N, LN, or G	NA	Kaplan-Meier 95/95 UTL
		not N, LN, or G (i.e., nonparametric)	Mild	Kaplan-Meier 95/95 UTL
			Moderate to High	Nonparametric 95/95 UTL[4]

Abbreviations:

95/95 UTL = one-sided 95 percent upper tolerance limit for the 95th percentile
BTV = Background Threshold Value
G = gamma distribution
HW = Hawkins Wixley
LN = lognormal distribution
N = normal distribution
n = sample size (detects + nondetects)
NA = not applicable
ND = nondetects
UCL = upper confidence limit on the mean
USEPA = United States Environmental Protection Agency
UTL = upper tolerance limit
WH = Wilson Hilferty

Notes:

[1] Goodness-of-fit test at α=0.05 significance level implemented with ProUCL ProUCL 5.1.002 (USEPA, 2015). Distributions tested for normality or lognormality using Shapiro Wilk (n≤50) and Lillierfors (n>50) and for gamma distribution using Kolmogorov-Smirnov.

[2] Skewness estimated using the standard deviation of the log-transformed data (detects only) (σ). Datasets with σ≤1.0 are considered mildly skewed; σ>1.0 is considered moderately to highly skewed (USEPA, 2015).

[2] Use of UTLs for establishing upper bound for background is consistent with USEPA guidance (1989; 1992; 2009). Requirements for minimum sample size and number of detects, and hierarchy for preferred distributions are consistent with USEPA (2015).

[3] If the result is greater than the maximum detected concentration, then BTV = maximum detect.

[4] Nonparametric UTL is based on a rank-ordered value in the data set. For sample sizes n<92, the nonparametric 95/95 UTL is equivalent to the maximum detect (Conover, 1999).

Abbreviations:

95/95 UTL = one-sided 95 percent upper confidence limit for the 95th percentile
BTV = background threshold value
FOD = frequency of detection
ft bgs = feet below ground surface
G = gamma
KM = Kaplan-Meier
Ln = lognormal
mg/kg = milligrams per kilogram
N = normal
NP = nonparametric
Perc. = percentile
-- = insufficient data for calculating statistics
Max (a) = insufficient data for calculating UTL; BTV is based on the maximum
Max (b) = 95UTL is greater than the maximum; BTV is based on the maximum
UTL = upper tolerance limit
µg/kg = micrograms per kilogram
WH = Wilson Hilferty

Notes:

[1] Statistics are provided for full datasets. Potential statistical outliers identified in the dataset are presented in Table J-2.

[2] Distribution assessed by goodness-of-fit tests based on detected values only conducted using ProUCL 5.1.002 at a 95% confidence level (α = 0.05).
Distribution for BTV selected according to the following hierarchy: normal > gamma > lognormal > nonparametric.

[3] UTLs only calculated for analytes with at least 8 total observations and 5 detected observations (USEPA, 2015).

[4] For nonparametric UTLs, the achieved minimum coverage with 95% confidence is provided (USEPA 2009, Table 17-4).

[5] Final BTV selected in accordance with decision tree presented in Table J-3.
Notes indicate basis for BTV: UTL = 95/95 UTL; Max = maximum detected concentration; ND = BTV not defined because FOD=0%.
Values less than 10 are reported to 2 significant figures. Values greater than 10 are reported to 3 significant figures.

[6] New York State soil background are 95th percentiles and maximums for source-distant samples collected as part of rural soil survey (NYSDEC, 2005).
< # = value is non-detect and value shown is method detection limit.
*Actual detected value; other non-detected readings had higher values.
***Actual non-detected value; other detected readings had lower values.

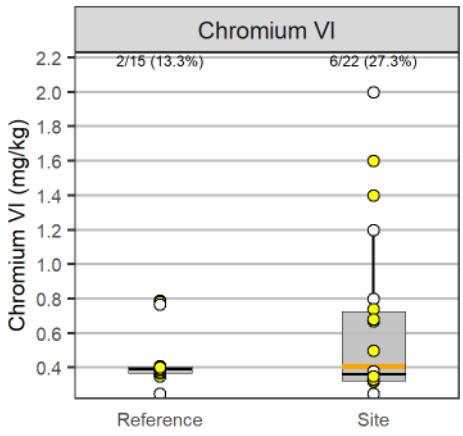
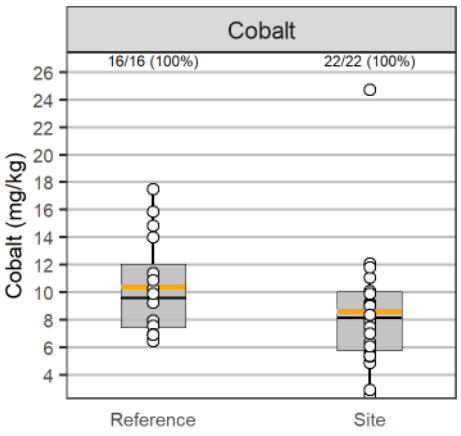
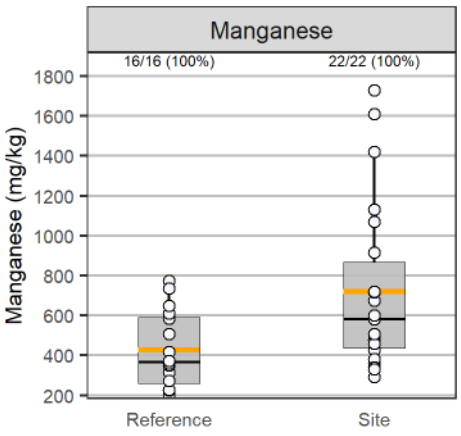
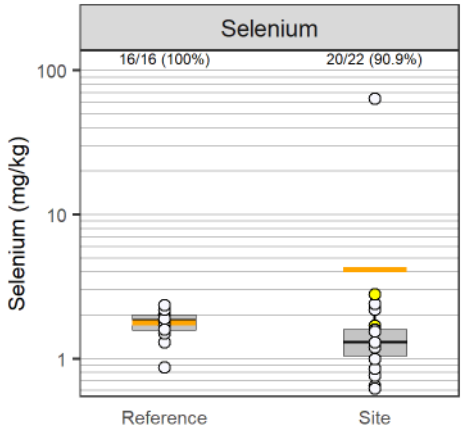
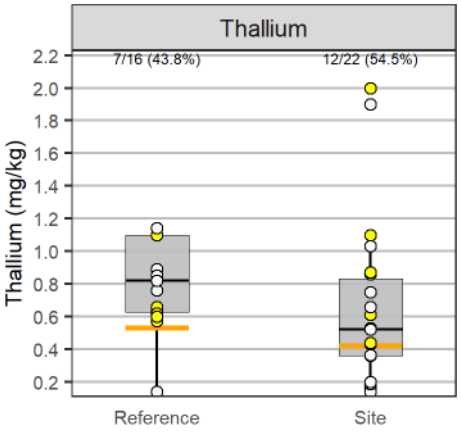
Box Plots comparing Site to Reference Soil Data

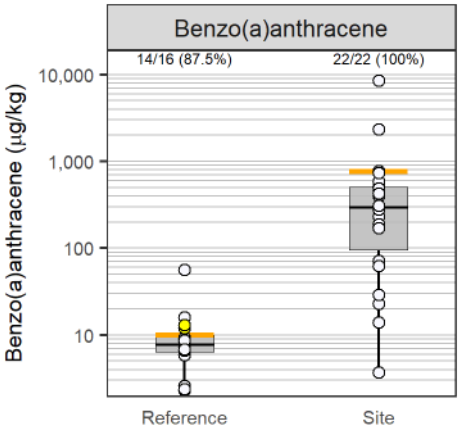


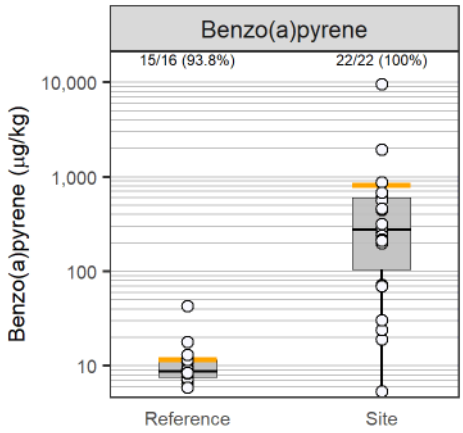


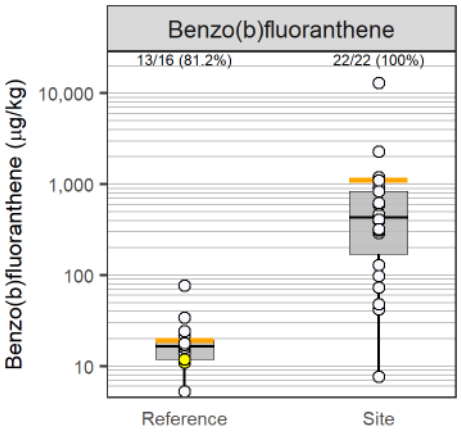


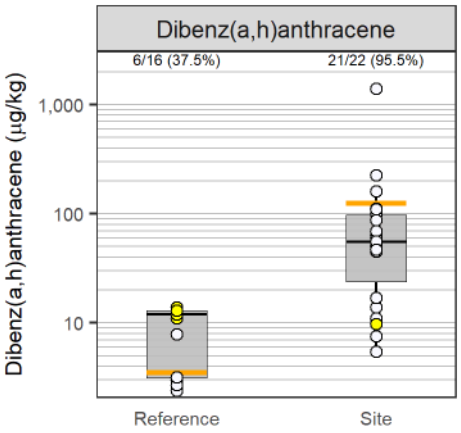


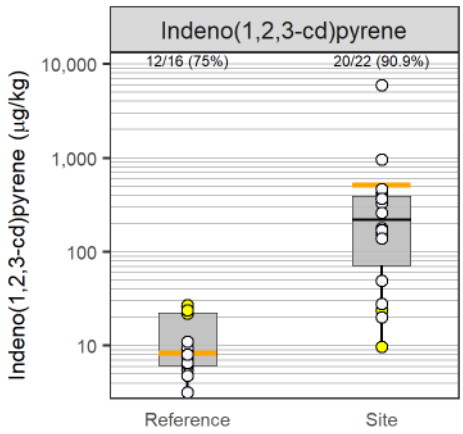












The population mean was estimated as follows:

- If the samples size was ≥ 8 and all results were detected, the arithmetic mean was calculated.
- If the samples size was ≥ 8, the frequency of detection (FOD) was <100% and ≥ 50%:
  - > 1 unique non-detect reporting limit (RL), the Kaplan Meier (KM) mean was calculated.
  - 1 unique non-detect RL, the mean was estimated using Robust Regression on Order Statistics (ROS).
- If the samples size was ≥ 8 and the FOD was <50% and ≥ 20%, the mean was estimated using ROS.
- If the dataset had < 8 samples and/or FOD < 20%, the mean was not estimated.

Abbreviations:

FOD: frequency of detection
Ho: null hypothesis
mg/kg: milligrams per kilogram
n: sample size
n/a: not analyzed
WMW: Wilcoxon-Mann-Whitney
T-W: Tarone-Ware
µg/kg: micrograms per kilogram
<: less than
≤: less than or equal to
=: equals
≠: does not equal

Notes:

1. The mean concentration includes a Kaplan-Meier adjustment for nondetects if the dataset contains non-detects. Kaplan-Meier adjustments calculated using ProUCL version 5.1.002.
2. The median concentration is the 50th percentile for the full dataset (i.e., includes detects and non-detects).
3. Distribution assessed by goodness-of-fit tests using ProUCL Version 5.1.002 at a 95% confidence level (a = 0.05).
   Distributions:
   Normal (N): dataset follows a normal distribution according to the Shapiro-Wilk test (n ≤ 50) or Lilliefors test (n > 50).
   Gamma (G): dataset follows a gamma distribution according to the Anderson-Darling or Kolmogorov-Smirnov test.
   Lognormal (Ln): dataset follows a lognormal distribution according to the Shapiro-Wilk test (n ≤ 50) or Lilliefors test (n > 50).
   Nonparametric (NP): dataset does not follow any of the three distributions listed above.
4. Site mean or median concentration minus background mean or median concentration.
5. Hypothesis testing conducted on datasets with sample size ≥ 8 and detects ≥ 5 in ProUCL version 5.1.002. Appropriate hypothesis test selected based on degree of censoring, range of non-detects, and distribution of the dataset:
   t-Test: FOD = 100% and both datasets are normally or lognormally distributed.
   Wilcoxon-Mann-Whitney: 40% < FOD ≤ 100%, dataset includes non-detects with a single reporting limit or datasets were not normally distributed.
   Tarone-Ware: FOD < 100%, one or both datasets include detects at or below the minimum non-detect reporting limit.
6. Two-sided Alternative Null hypothesis H_o: Site Mean/Median = Background Mean/Median. Reject H_o if p-value is less than 0.1. Conclusions are based on α = 0.1.
   Gray shading indicates there is a statistically significant difference between site and background concentrations.
   One-sided Alternative Null hypothesis Ho: Site Mean/Median ≤ Background Mean/Median. Reject Ho if p-value is less than 0.05. Conclusions are based on α = 0.05.
   Gray shading indicates there is a statistically significant difference between site and background concentrations.

Minimum Non-Detect	0.42	0.6
Maximum Non-Detect	1	2
Percent Non-detects	30.43%	31.25%
Minimum Detect	0.096	0.26
Maximum Detect	4.07	1.2
Mean of Detects	1.164	0.678
Median of Detects	0.96	0.79
SD of Detects	0.971	0.355
KM Mean	0.918	0.612
KM SD	0.876	0.331

Sample 1 vs Sample 2 Tarone-Ware Test

H0: Mean/Median of Sample 1 <= Mean/Median of Sample 2

TW Statistic	0.761
TW Critical Value (0.05)	1.645
P-Value	0.223

Conclusion with Alpha = 0.05

Do Not Reject H0, Conclude Sample 1 <= Sample 2

P-Value >= alpha (0.05)
