Table II-1: Completeness Checklist

Quality Assurance/Quality Control Questions	Yes/No? Comments?
1. Was the report signed by the responsible applicant approved representative?	Yes
2. Were the methods for sampling, chemical and biological testing described in the Sampling and Analysis Plan (SAP) and the Laboratory QA Plan (LQAP) followed?	Yes
3. If not, were deviations documented?	NA
4. Was the SAP approved by the New England District?	Yes
5. Did the applicant use a laboratory with a LQAP on file at the New England District?	Yes
6. Did the samples adequately represent the physical/chemical variability in the dredging area?	Yes
7. Were the correct stations sampled (include the precision of the navigation method used)?	Yes
8. Were the preservation and storage requirements in Chapter 8 of the EPA/Corps QA/QC Manual (EPA/USACE 1995) and EPA (2001d) followed?	Yes
9. Were the samples properly labeled?	Yes
10. Were all the requested data included?	Yes
11. Were the reporting limits met?	Yes
12. Were the chain-of-custody forms properly processed?	Yes
13. Were the method blanks run and were the concentration below the acceptance criteria?	Yes
14. Was the MDL study performed on each matrix (with this data submission) or within the last 12 months?	Yes
15. Were the SRM/CRM analyses within acceptance criteria?	Yes
16. Were the matrix spike/matrix spike duplicates run at the required frequency and was the percent recovery/RPD within the acceptance criteria?	Yes, with one noted exception.
17. Were the duplicate samples analyzed and were the RPDs within the required acceptance criteria?	Yes
18. For each analytical fraction of organic compounds, were recoveries for the internal standard within the acceptance criteria?	Yes
19. Were surrogate recoveries within the required acceptance criteria?	Yes, with four noted exception.
20. Were corrective action forms provided for all non-conforming data?	Yes
21. Were all the species-specific test conditions in Appendix V met?	NA
22. Were the test-specific age requirements met for each test species?	NA
23. Was the bulk physical/chemical testing performed on the sediments/composites that were biologically tested?	NA
24. Were the mortality acceptance criteria met for the water column and sediment toxicity tests?	NA
25. Were the test performance requirements in Table 11.3 of EPA (1994a) met?	NA

Table II-2: Quality Control Summary for Analyses of Polyaromatic Hydrocarbons (PAHs) and other base-neutrals in Sediment and Tissue Matrices

Method Reference Number: 8270C

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Initial Calibration	Must be performed prior to the analysis of any QC sample or field sample (<20 % RSD for each compound)	Yes		Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)	Yes		In Data Package
Calibration Verification (Second Source)	Once, after initial calibration (80 to 120% recovery of each compound)	Yes		Retained at Lab
Continuing Calibration	At the beginning of every 12 hour shift ((15 % D)	Yes		Retained at Lab
Standard Reference Materials	Within the limits provided by vendor	Yes		In Data Package
Method Blank	No target analytes > RL	Yes		In Data Package
Matrix Spike/Matrix Spike Duplicate (MS/MSD)	One set (MS/MSD) per group of field samples. Must contain all target analytes. (Recovery Limits 50 to 120%; RPD <30%)	Yes		In Data Package
Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 30%)	Yes		In Data Package
Surrogate Recoveries	Calculate % recovery (30 to 150% recovery)	Yes		In Data Package
Internal Standard Areas	Within 50 to 200% of internal standards in continuing calibration check	Yes		Retained at Lab

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Table II-3: Quality Control Summary for Analyses of Pesticides in Sediment, Tissue and Water Matrices

Method Reference Number: 8081B

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Initial Calibration	Must be performed prior to the analysis of any QC sample or field sample (< 20 % RSD for each compound)	Yes		Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)	Yes		In Data Package
Calibration Verification (Second Source)	Once, after initial calibration (80 to 120% recovery of each compound)	Yes		Retained at Lab
Continuing Calibration	Every 20 injections ((15 % D)	Yes		Retained at Lab
Standard Reference Materials	Within the limits provided by vendor	Yes		In Data Package
Method Blank	No target analytes > RL	Yes		In Data Package
Matrix Spike/Matrix Spike Duplicate (MS/MSD)	One set (MS/MSD) per group of field samples. Must contain all target analytes. (Recovery Limits 50 to 120%; RPD <30%)	No	Aldrin MSD %RPD was above the limit.	In Data Package
Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 30%)	Yes		In Data Package
Surrogate Recoveries	Calculate % recovery (30 to 150% recovery)	No	Tetrachloro-m-xylene surrogate recovery was below the limit for Composite 8 Elutriate - Rep 2. Decachlorobiphenyl surrogate was low for CLDS Ref Site Bank Rep 1, 2, and 3.	In Data Package

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Table II-4: Quality Control Summary for Analyses of Polychlorinated Biphenyls (PCB congeners) in Sediment, Tissue and Water Matrices

Method Reference Number: 8082A

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Initial Calibration	Must be performed prior to the analysis of any QC sample or field sample (<20 % RSD for each compound)	Yes		Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)	Yes		In Data Package
Calibration Verification (Second Source)	Once, after initial calibration. (80 to 120% recovery of each compound)	Yes		Retained at Lab
Continuing Calibration	Every 20 injections ($\pm 15\%$ D)	Yes		Retained at Lab
Standard Reference Materials	Within the limits provided by vendor	NA		In Data Package
Method Blank	No target analytes > RL	Yes		In Data Package
Matrix Spike/Matrix Spike Duplicate (MS/MSD)	One set (MS/MSD) per group of field samples. Must contain all target analytes. (Recovery Limits 50 to 120%; RPD <30%)	Yes		In Data Package
Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 30%)	Yes		In Data Package
Surrogate Recoveries	Calculate % recovery (30 to 150% recovery)	Yes		In Data Package

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Table II-5: Quality Control Summary for Analyses of Metals in Sediments, Tissue and Water Matrices

Method Reference Numbers: Various Reference Numbers

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Linear Range Determination for ICP	Performed Quarterly	Yes		Retained at Lab
Initial Calibration for AA, Hg	Performed Daily (Correlation Coefficient ± 0.995)	Yes		Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)	Yes		In Data Package
Initial Calibration Verification/ Continuing Calibration Verification	Hg: 80 to 120% recovery Other metals: 90 to 110% recovery	Yes		Retained at Lab
Initial Calibration Blank/ Continuing Calibration Blank	No target analytes > Instrument Detection Limit (IDL)	Yes		Retained at Lab
Standard Reference Materials	Within the limits provided by vendor	Yes		In Data Package
Method Blank	No target analytes > RL	Yes		In Data Package
Sample Spike/ Sample Duplicate	One set per group of field samples. Must contain all target analytes. Recovery Limits (75 to 125%; RPD < 20% or < 35%)	Yes		In Data Package
Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 30%)	Yes		In Data Package

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Table II-6: Quality Control Summary for Analyses of other Organic Chemicals not listed in Sediment, Tissue and Water Matrices

Method Reference Numbers:

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Initial Calibration	Must be performed prior to the analysis of any QC sample or field sample (<20 % RSD for each compound)	Yes		Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)	Yes		In Data Package
Calibration Verification (Second Source)	Once, after initial calibration (80 to 120% recovery of each compound)	Yes		Retained at Lab
Continuing Calibration	At the beginning of every 12 hour shift (\pm 15 % D)	Yes		Retained at Lab
Standard Reference Materials	Within the limits provided by vendor	Yes		In Data Package
Method Blank	No target analytes > RL	Yes		In Data Package
Matrix Spike/Matrix Spike Duplicate (MS/MSD)	One set (MS/MSD) per group of field samples. Must contain all target analytes. (Recovery Limits 50 to 120%; RPD <30%)	Yes		In Data Package
Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 30%)	Yes		In Data Package
Surrogate Recoveries	Calculate % recovery (30 to 150% recovery)	Yes		In Data Package
Internal Standard Areas (if applicable)	Within 50 to 200% of internal standards in continuing calibration check	Yes		Retained at Lab

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

SAMPLE RECEIPT AND CONDITION DOCUMENTATION

Page 1 of 3

STUDY NO: 29516
SDG No:
Project: FNP: New Haven Harbor
Delivered via: Client
Date and Time Received: 08/18/17 1300 Date and Time Logged into Lab: 08/21/17 1600
Received By: JTP Logged into Lab by: KC 
Air bill / Way bill: No Air bill included in folder if received? NA
Cooler on ice/packs: No Custody Seals present? NA
Cooler Blank Temp (C) at arrival: NA Custody Seals intact? NA
Number of COC Pages: 5
COC Serial Number(s): See CoCs
COC Complete: Yes * Does the info on the COC match the samples? Yes *
Sampled Date: Yes Were samples received within holding time? Yes
Field ID complete: Yes Were all samples properly labeled? Yes *
Sampled Time: Yes Were proper sample containers used? Yes
Analysis request: Yes Were samples received intact? (none broken or leaking) Yes *
COC Signed and dated: Yes Were sample volumes sufficient for requested analysis? Yes *
Were all samples received? Yes Were VOC vials free of headspace? NA
Client notification/authorization: Not required pH Test strip ID number: _____

Notes and qualifications:

- See COC

* On day samples were dropped off, chains of custody provided did not correspond to sampling information on individual sample containers. As a result, samples were rejected and stored at 4 C. AECOM staff were present at ESI on 08/21/17 and revised chains of custody to encompass all samples received. Samples were subsequently accepted and processed. One container of -049 was leaking and was exchanged into viable containers upon receipt. Compositing information was relayed by AECOM staff, as no formal compositing scheme was provided to ESI. Residual sample from grain size analyses were utilized in sample compositing, as per AECOM.

 Composite Lab ID.: 29517-008 Composite Final Volume: ~26 gallons
 Composite Matrix: Solid Composite Container(s): 50 gallon buckets
 Composite Prepared Date: 08/21/17 10 gallon bucket
 Composite Prepared Time: 1130
 Initials: DB/ JTP
 Protocol: ESI SOP 1478

This composite was prepared according to protocols cited using the samples and amounts listed below:

Field ID	ESI Lab ID	Matrix	Liquids Excluded	Solids Excluded	Amount Added	Notes
NHH-X	29516-045 -046	Solid	—	—	~9.5gals	
NHH-Y	↓ -018 -019	Solid	—	—	~8.5gals	
NHH-Z	↓ -001 -002	Solid	—	—	~11.5gals	

Subsamples Removed:

Lab Number	Sample Use
29519	10-Day Solid Phase <i>L. plumulosus</i>
29520	10-Day Solid Phase <i>A. bahia</i>
29521	Elutriate Preparation
29524	28-Day Bio-accumulation <i>M. nasuta</i>
29525	28-Day Bio-accumulation <i>N. virens</i>

Laboratory Homogenization Documentation

Project Number: 29516
 Project Name: New Haven Harbor
 Composite Identifier: CLDS Reference Site
 Composite Lab ID.: 29517-009 Composite Final Volume: ≈ 20 gallons
 Composite Matrix: Solid Composite Container(s): 4x5 gallons
 Composite Prepared Date: 08/21/17 1x1 gallon
 Composite Prepared Time: 1630
 Initials: JTP
 Protocol: ESI SOP 1478

This composite was prepared according to protocols cited using the samples and amounts listed below:

Field ID	ESI Lab ID	Matrix	Liquids Excluded	Solids Excluded	Amount Added	Notes
NHH-CLDS	29516-047	Solid	—	few shells	≈ 20g	

Subsamples Removed:

Lab Number	Sample Use
29519	10-Day Solid Phase <i>L. plumulosus</i>
29520	10-Day Solid Phase <i>A. bahia</i>
29521	Elutriate Preparation <u>Ⓢ JTP 08/25/17</u>
29524	28-Day Bio-accumulation <i>M. nasuta</i>
29525	28-Day Bio-accumulation <i>N. virens</i>

Laboratory Composite Preparation Documentation

Project Number: 29516
 Project Name: New Haven Harbor
 Composite Identifier: Composite Reference Site Water
 Composite Lab ID.: 29517-010 Composite Final Volume: 30 gal
 Composite Matrix: Water Composite Container(s): 6x5 gal
 Composite Prepared Date: 08/21/17
 Composite Prepared Time: 1445
 Initials: DD
 Protocol: ESI SOP 1478

This composite was prepared according to protocols cited using the samples and amounts listed below:

Field ID	ESI Lab ID	Matrix	Liquids Excluded	Solids Excluded	Amount Added	Notes
CLDS-Ref-Bottom	29516-001 ⁰⁵³	Water	—	—	10 gal	
CLDS-Ref-Mid	29516-003 ⁰⁵²	Water	—	—	10 gal	
CLDS-Ref-Top	29516-004 ⁰⁵¹	Water	—	—	10 gal

Project Name: USACE/NHH FNP
Project Number: 60543021

Lab Number: L1735126
Report Date: 11/10/17

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: USACE/NHH FNP
Project Number: 60543021

Lab Number: L1735126
Report Date: 11/10/17

Case Narrative (continued)

Report Submission

November 10, 2017: This is a Final Report

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L1735126 was frozen upon receipt in order to arrest the holding time.

Semivolatile Organics

L1735126-01-55: The samples have elevated detection limits due to the dilution required by the sample matrix.

The WG1055360-6/-7 MS/MSD recoveries, performed on L1735126-01, are outside the acceptance criteria for CI3-BZ#18 (131%/125%), CI4-BZ#49 (46%-MS only) and CI7-BZ#183 (46%-MS only).

The WG1055393-6/-7 MS/MSD recoveries, performed on L1735126-21, are outside the acceptance criteria for CI3-BZ#18 (135%/124%).

The WG1055419-6/-7 MS/MSD recoveries, performed on L1735126-41, are outside the acceptance criteria for several compounds. See the QC Report and MS/MSD recovery section for additional details.

The WG1055393-4 Standard Reference Material is outside the QC limits for CI3-BZ#28.

The WG1055419-4 Standard Reference Material is outside the QC limits for CI3-BZ#28.

Pesticides

All recoveries for the LCS/LCSD WG1055392-2/-3 are within SOP criteria (40-140%); therefore no further action was taken.

Project Name: USACE/NHH FNP
Project Number: 60543021

Lab Number: L1735126
Report Date: 11/10/17

Case Narrative (continued)

All recoveries for MS/MSD WG1055361-6/-7 and WG1055392-6/-7 are within Lab SOP criteria (40-140%); therefore no further action was taken.

The WG1055417-6/-7 MS/MSD recoveries, performed on L1735126-55, are outside the acceptance criteria for 4,4'-DDE (42%/35%) and cis-Nonachlor (45%-MSD only); however, the associated LCS/LCSD recoveries are within overall method allowances.

WG1055417-7: The surrogate recoveries are outside the acceptance criteria for BZ198 (229%); however, the sample was not re-extracted due to obvious matrix interference.

The WG1055392-5 Laboratory Duplicate RPDs for 4,4'-DDE (58%) and Endrin (49%), performed on L1735126-21, are outside the acceptance criteria.

The WG1055417-5 Laboratory Duplicate RPD for 4,4'-DDE (67%), performed on L1735126-41, is outside the acceptance criteria.

Total Metals

The WG1051696-5 Laboratory Duplicate RPD for Lead (41%) and Zinc (39%), performed on L1735126-01, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.

The WG1052852-5 Laboratory Duplicate RPD for Lead (21%) and Nickel (52%), performed on L1735126-21, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.

The WG1049111-5 Laboratory Duplicate RPD for Chromium (22%), performed on L1735126-41, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.

Project Name: USACE/NHH FNP
Project Number: 60543021

Lab Number: L1735126
Report Date: 11/10/17

Case Narrative (continued)

The WG1050284-5 Laboratory Duplicate RPD for Chromium (42%), Copper (24%), Lead (54%) and Zinc (49%), performed on L1735126-49, is outside the acceptance criteria. The elevated RPD has been attributed to the non-homogeneous nature of the native sample.

The WG1052853-3/-4 MS/MSD recovery, performed on L1735126-21, is outside the acceptance criteria for Mercury (77%/78%); however, the associated LCS recovery is within overall method allowances. No further action was required.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

Project Name: USACE/NHH FNP
Project Number: 60543021

Lab Number: L1735126
Report Date: 11/10/17

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Alpha Analytical, Inc.

Table II-1: Completeness Checklist

Quality Assurance/Quality Control Questions	Yes/No? Comments?
1. Was the report signed by the responsible applicant approved representative?	Yes
2. Were the methods for sampling, chemical and biological testing described in the Sampling and Analysis Plan (SAP) and the Laboratory QA Plan (LQAP) followed?	Yes
3. If not, were deviations documented?	
4. Was the SAP approved by the New England District?	
5. Did the applicant use a laboratory with a LQAP on file at the New England District?	Yes
6. Did the samples adequately represent the physical/chemical variability in the dredging area?	
7. Were the correct stations sampled (include the precision of the navigation method used)?	
8. Were the preservation and storage requirements in Chapter 8 of the EPA/Corps QA/QC Manual (EPA/USACE 1995) and EPA (2001d) followed?	Yes
9. Were the samples properly labeled?	Yes
10. Were all the requested data included?	Yes
11. Were the reporting limits met?	No – PCB RLs slightly elevated; Methoxychlor
12. Were the chain-of-custody forms properly processed?	Yes
13. Were the method blanks run and were the concentration below the acceptance criteria?	Yes
14. Was the MDL study performed on each matrix (with this data submission) or within the last 12 months?	Yes
15. Were the SRM/CRM analyses within acceptance criteria?	No – See Narrative
16. Were the matrix spike/matrix spike duplicates run at the required frequency and was the percent recovery/RPD within the acceptance criteria?	No – See Narrative
17. Were the duplicate samples analyzed and were the RPDs within the required acceptance criteria?	No – See Narrative
18. For each analytical fraction of organic compounds, were recoveries for the internal standard within the acceptance criteria?	N/A
19. Were surrogate recoveries within the required acceptance criteria?	No – See Narrative

Table II-1 (Continued): Completeness Checklist

Quality Assurance/Quality Control Questions	Yes/No? Comments?
20. Were corrective action forms provided for all non-conforming data?	Yes
21. Were all the species-specific test conditions in Appendix V met?	
22. Were the test-specific age requirements met for each test species?	
23. Was the bulk physical/chemical testing performed on the sediments/composites that were biologically tested?	
24. Were the mortality acceptance criteria met for the water column and sediment toxicity tests?	
25. Were the test performance requirements in Table 11.3 of EPA (1994a) met?	

Table II-2: Quality Control Summary for Analyses of Polyaromatic Hydrocarbons (PAHs) and other base-neutrals in Sediment and Tissue Matrices

Method Reference Number: 8270C

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Initial Calibration	Must be performed prior to the analysis of any QC sample or field sample (<20 % RSD for each compound)	Yes		Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)	Yes		Retained at Lab and On file at USACoE-NED
Calibration Verification (Second Source)	Once, after initial calibration (80 to 120% recovery of each compound)	Yes		Retained at Lab
Continuing Calibration	At the beginning of every 12 hour shift ($\pm 15\%$ D)	No	CCV- opening for method blank, LCS,LCSD: Benzo(b)fluoranthene @ 20% CCV- opening for SRM: Benzo(b)fluoranthene @20% CCV- opening for L1735126-01,01D, 01MS, 01MSD: Benzo(k)fluoranthene @ 17%, dibenz(a,h)anthracene @ 20% CCV – opening for L1735126-02 through-20: Benz(a)anthracene @ 17%, Dibenz(a,h)anthracene @20%, Benzo(g,h,i)perylene @ 17%, CCV – opening for L1735126-41, 41D, 41MS, 41MSD through -55: Benzo(b)fluoranthene @ 18%	Retained at Lab
Standard Reference Materials	Within the limits provided by vendor	Yes		In Data Package
Method Blank	No target analytes > RL	Yes		In Data Package
Matrix Spike/Matrix Spike Duplicate (MS/MSD)	One set (MS/MSD) per group of field samples. Must contain all target analytes.	No	L1735126-41 MS: Naphthalene @ 48%, Acenaphthylene @ 48%, Acenaphthene @ 46%, Fluorene	In Data Package

US Army Corps of Engineers

	(Recovery Limits 50 to 120%; RPD <30%)		<p>@ 48%, Anthracene @ 43%, Chrysene @ 42%, Benzo(k)fluoranthene @ 45%</p> <p>MSD: Naphthalene @ 40%, Acenaphthylene @ 41%, Acenaphthene @ 39%, Fluorene @ 41%, Phenanthrene @ 49%, Anthracene @ 38%, Fluoranthene @ 43%, Pyrene @ 40%, Chrysene @ 36%, Benzo(k)fluoranthene @ 37%, Benzo(a)pyrene @ 45%, Dibenz(a,h)anthracene @ 47%, Benzo(g,h,i)perylene @ 48%</p> <p>RPD: Benzo(a)pyrene @ 37%</p>	
Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 30%)	Yes		In Data Package
Surrogate Recoveries	Calculate % recovery (30 to 150% recovery)	Yes		In Data Package
Internal Standard Areas	Within 50 to 200% of internal standards in continuing calibration check	Yes		Retained at Lab

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Table II-3: Quality Control Summary for the Analyses of Pesticides in Sediment, Tissue, and Water Matrices

Method Reference Number: 8081B

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Initial Calibration	Must be performed prior to the analysis of any QC sample or field sample (<20 % RSD for each compound)	Yes		Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)	Yes		Retained at Lab and On file at USACoE-NED
Calibration Verification (Second Source)	Once, after initial calibration (80 to 120% recovery of each compound)	Yes		Retained at Lab
Continuing Calibration	Every 20 injections ($\pm 15\%$ D)	No	CCV1: opening for Blank,LCS,LCSD L1735126-01, 01D, 01MS, 01MSD: Column a: gamma-BHC @ 18% Column b: gamma-BHC @ 23%, Aldrin @ 19%, Dieldrin @ 16% CCV2:opening for L1735126-02 through 20: Column a: gamma-BHC @ 19%, Aldrin @ 18%, Methoxychlor @ 20% Column b : gamma-BHC @ 22%, Heptachlor @ 16%, Aldrin @ 20%, Dieldrin @ 16%, 4,4-DDD @ 18% CCV3: opening for Blank2, LCS2, LCSD2, L1735126-21, 21D, 21MS, 21MSD: Column a : gamma-BHC @ 18%, Aldrin @ 17% Column b : gamma-BHC @ 25%, Aldrin @ 21%, heptachlor epoxide b @ 16%, Endosulfan I @ 16%, Dieldrin @ 18% CCV4: opening for L1735126-22 through -40	Retained at Lab

Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 30%)	Yes		In Data Package
Surrogate Recoveries	Calculate % recovery (30 to 150% recovery)	Yes		In Data Package

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Table II-5: Quality Control Summary for Analyses of Metals in Sediments, Tissue, and Water Matrices

Method Reference Numbers: Various Reference Numbers

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Linear Range Determination for ICP	Performed Quarterly	N/A	Annually	Retained at Lab
Initial Calibration for AA, Hg	Performed Daily (Correlation Coefficient ≥ 0.995)	Yes		Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)	Yes		Retained at Lab and On file at USACoE-NED
Initial Calibration Verification/ Continuing Calibration Verification	Hg: 80 to 120% recovery Other metals: 90 to 110% recovery	Yes		Retained at Lab
Initial Calibration Blank/ Continuing Calibration Blank	No target analytes > Instrument Detection Limit (IDL)	No	Results >3x IDL noted, on file at lab	Retained at Lab
Standard Reference Materials	Within the limits provided by vendor	Yes		In Data Package
Method Blank	No target analytes > RL	Yes		In Data Package
Sample Spike/ Sample Duplicate	One set per group of field samples. Must contain all target analytes. Recovery Limits (75 to 125%; RPD < 20% or < 35%)	No	L1735126-21: (Hg 77%/78%)	In Data Package
Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 30%)	No	L1735126-41: (Cr 22%), L1735126-49: (Cr 42%, Cu 24%, Pb 54%, Zn 49%), L1735126-01: (Pb 41%, Zn 39%), L1735126-21: (Pb 21%, Ni 52%)	In Data Package

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Table II-6: Quality Control Summary for Analyses of other Organic Chemicals not listed in Sediment, Tissue, and Water Matrices

Method Reference Numbers:

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Initial Calibration	Must be performed prior to the analysis of any QC sample or field sample (<20 % RSD for each compound)			Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)			In Data Package
Calibration Verification (Second Source)	Once, after initial calibration (80 to 120% recovery of each compound)			Retained at Lab
Continuing Calibration	At the beginning of every 12 hour shift ($\pm 15\%$ D)			Retained at Lab
Standard Reference Materials	Within the limits provided by vendor			In Data Package
Method Blank	No target analytes > RL			In Data Package
Matrix Spike/Matrix Spike Duplicate (MS/MSD)	One set (MS/MSD) per group of field samples. Must contain all target analytes. (Recovery Limits 50 to 120%; RPD <30%)			In Data Package
Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 30%)			In Data Package
Surrogate Recoveries	Calculate % recovery (30 to 150% recovery)			In Data Package
Internal Standard Areas (if applicable)	Within 50 to 200% of internal standards in continuing calibration check			In Data Package

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Table II-7: Quality Control Summary for Analyses of Sediment Grain Size and Total Organic Carbon

Method Reference Numbers:

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Grain Size: Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 25%)			In Data Package
Total Organic Carbon: Standard Reference Materials	Within the limits provided by vendor			In Data Package
Total Organic Carbon: Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD <30%)			In Data Package

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Table II-8: Quality Control Summary for Biological Toxicity Testing only

Method Reference Numbers:

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Test condition requirements for each species: Temperature, Salinity, pH, D.O., Ammonia (Total, Un-ionized)	Test conditions within the requirements specified for each species			In Data Package
Test species age	Age/health within guidelines for each species (Appendix V)			In Data Package
Bulk physical/chemical analyses (If required by the Sampling plan)	Required? If so, performed? Yes or No			In Data Package
Water column toxicity test: Control mortality Control abnormality	 < 10% mean < 30% mussel/oyster; < 40% clam larvae, < 30% sea urchin larvae			In Data Package
Sediment toxicity test: Control mortality Compliance with applicable test acceptability requirements in Table 11.3 (EPA 1994a)	 < 10% mean (no chamber >20%) See EPA (1994a) Section 9; Table 11.3			In Data Package

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Project Name: USACE/NHH FNP
Project Number: 60543021

Lab Number: L1735250
Report Date: 11/20/17

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Number: 60543021

Lab Number: L1735250
Report Date: 11/20/17

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L1735250: Tissue samples were frozen upon receipt in order to arrest the holding time.

Semivolatile Organics

PCB samples L1735250-21 through -55 have elevated detection limits due to the dilution required due to matrix interferences.

The WG1057021-1 Method Blank, associated with L1735250-21 through -40, has concentrations above the reporting limits for Cl3-BZ#18. Since the sample(s) were non-detect to the RL for these target analytes, no further actions were taken. The results of the original analysis are reported.

The WG1057014-6/-7 MS/MSD recoveries, performed on L1735250-01, are outside the acceptance criteria for Cl3-MZ#18 (167%/144%) and Cl4-BZ#49 (50%/50%).

The WG1057021-6/-7 MS/MSD recoveries/RPDs, performed on L1735250-21, are outside the acceptance criteria for several compounds. See the enclosed MS/MSD recovery and QC summary form for sepcific details.

The WG1057028-6/-7 MS/MSD recoveries, performed on L1735250-41, are outside the acceptance criteria for Naphthalene (50%-MS only), Acenaphthene (50%-MS only), Anthracene (49%-MS only), Chrysene (50%-MS only), Benzo(k)fluoranthene (49%-MS only), Cl2-BZ#8 (50%-MS only), Cl4-BZ#49 (46%/49%) and Cl7-BZ#183 (46%-MS only).

Pesticides

L1735250-38: The surrogate recovery is outside the acceptance criteria for DBOB (175%); however, the

Project Number: 60543021

Lab Number: L1735250
Report Date: 11/20/17

Case Narrative (continued)

sample was not re-extracted due to obvious matrix interference.

L1735250-42: The surrogate recovery is outside the acceptance criteria for BZ198 (191%); however, the sample was not re-extracted due to obvious matrix interference.

The WG1057025-2/-3 LCS/LCSD recoveries, associated with L1735250-41 through -55, are outside the acceptance criteria for individual target compounds, but within the overall method allowances. The results of the associated samples are reported; however, all results are considered to have a potential bias for Hexachlorobenzene (40%/43%), gamma-BHC (40%/45%), Heptachlor (41%/44%), Aldrin (40%/43%), trans-Chlordane (48%-LCS only), Endosulfan I (48%-LCS only), cis-Chlordane (48%/49%). All recoveries for the LCS/LCSD, WG1057025-2/-3, are within SOP criteria (40-140%); therefore no further action was taken.

The WG1057016-6/-7 MS/MSD recoveries, performed on sample L1735250-21, are outside the acceptance criteria for several compounds; however, the associated LCS/LCSD are within overall method allowances.

The WG1057025-6/-7 MS/MSD recoveries, performed on L1735250-41, are within SOP criteria (40-140%); therefore no further action was taken. The WG1057025-7 MSD surrogate recovery is outside the acceptance criteria for BZ 198 (206%); however, the sample was not re-extracted due to obvious matrix interference.

The Duplicate WG1057025-5, surrogate DBOB (23% B channel), performed on L1735250-41, is below the acceptable criteria. However, all other surrogate recoveries are within overall method allowances therefore no further action was taken.

The WG1057025-4 SRM recovery for cis-Chlordane (32%) is below the acceptable criteria.

Total Metals

The WG1056489-5 Laboratory Duplicate RPD for Arsenic (142%), Copper (142%) and Zinc (141%), performed on L1735250-53, is outside the acceptance criteria. The elevated RPD has been attributed to the non-

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

Report Format: DU Report with 'J' Qualifiers

Project Name: USACE/NHH FNP
Project Number: 60543021

Lab Number: L1735250
Report Date: 11/20/17

Data Qualifiers

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Alpha Analytical, Inc.

Table II-1: Completeness Checklist

Quality Assurance/Quality Control Questions	Yes/No? Comments?
1. Was the report signed by the responsible applicant approved representative?	Yes
2. Were the methods for sampling, chemical and biological testing described in the Sampling and Analysis Plan (SAP) and the Laboratory QA Plan (LQAP) followed?	Yes
3. If not, were deviations documented?	
4. Was the SAP approved by the New England District?	
5. Did the applicant use a laboratory with a LQAP on file at the New England District?	Yes
6. Did the samples adequately represent the physical/chemical variability in the dredging area?	
7. Were the correct stations sampled (include the precision of the navigation method used)?	
8. Were the preservation and storage requirements in Chapter 8 of the EPA/Corps QA/QC Manual (EPA/USACE 1995) and EPA (2001d) followed?	Yes
9. Were the samples properly labeled?	Yes
10. Were all the requested data included?	Yes
11. Were the reporting limits met?	No – PCB samples -21 to -55 due to matrix interference
12. Were the chain-of-custody forms properly processed?	Yes
13. Were the method blanks run and were the concentration below the acceptance criteria?	No – BZ18 in blank associated to -21 to -40
14. Was the MDL study performed on each matrix (with this data submission) or within the last 12 months?	Yes
15. Were the SRM/CRM analyses within acceptance criteria?	Yes
16. Were the matrix spike/matrix spike duplicates run at the required frequency and was the percent recovery/RPD within the acceptance criteria?	No – see Narrative
17. Were the duplicate samples analyzed and were the RPDs within the required acceptance criteria?	No – See Narrative
18. For each analytical fraction of organic compounds, were recoveries for the internal standard within the acceptance criteria?	Yes
19. Were surrogate recoveries within the required acceptance criteria?	No – see Narrative

Table II-1 (Continued): Completeness Checklist

Quality Assurance/Quality Control Questions	Yes/No? Comments?
20. Were corrective action forms provided for all non-conforming data?	Yes
21. Were all the species-specific test conditions in Appendix V met?	
22. Were the test-specific age requirements met for each test species?	
23. Was the bulk physical/chemical testing performed on the sediments/composites that were biologically tested?	
24. Were the mortality acceptance criteria met for the water column and sediment toxicity tests?	
25. Were the test performance requirements in Table 11.3 of EPA (1994a) met?	

Table II-2: Quality Control Summary for Analyses of Polyaromatic Hydrocarbons (PAHs) and other base-neutrals in Sediment and Tissue Matrices

Method Reference Number: 8270C

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Initial Calibration	Must be performed prior to the analysis of any QC sample or field sample (<20 % RSD for each compound)	Yes		Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)	Yes		Retained at Lab and On file at USACoE-NED
Calibration Verification (Second Source)	Once, after initial calibration (80 to 120% recovery of each compound)	Yes		Retained at Lab
Continuing Calibration	At the beginning of every 12 hour shift ($\pm 15\%$ D)	No	CCV: opening for MB2, LCS/LCSD2, SRM2: Benz(a)anthracene @ 18% CCV: opening for L1735250-36 through -40: Benzo(k)fluoranthene @ 16%	Retained at Lab
Standard Reference Materials	Within the limits provided by vendor	Yes		In Data Package
Method Blank	No target analytes > RL	Yes		In Data Package
Matrix Spike/Matrix Spike Duplicate (MS/MSD)	One set (MS/MSD) per group of field samples. Must contain all target analytes. (Recovery Limits 50 to 120%; RPD <30%)	No	L1735250-21MS: Naphthalene @ 34%, Acenaphthylene @ 36%, Acenaphthene @ 33%, Fluorene @ 35%, Phenanthrene @ 48%, Anthracene @ 38%, Fluoranthene @ 45%, Pyrene @ 44%, Chrysene @ 40%, Benzo(b)fluoranthene @ 47%, Benzo(k)fluoranthene @ 49%, Benzo(a)pyrene 39%, Indeno(1,2,3-cd)Pyrene @ 49%, Dibenz(a,h)anthracene @ 45%, Benzo(g,h,i)perylene @ 46% L1735250-21MSD: Naphthalene @ 41%, Acenaphthylene @ 41%, Acenaphthene @ 39%, Fluorene @ 41%, Anthracene @	In Data Package

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Table II-5: Quality Control Summary for Analyses of Metals in Sediments, Tissue, and Water Matrices

Method Reference Numbers: Various Reference Numbers

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Linear Range Determination for ICP	Performed Quarterly	N/A	Performed Annually	Retained at Lab
Initial Calibration for AA, Hg	Performed Daily (Correlation Coefficient ≥ 0.995)	Yes		Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)	Yes		Retained at Lab and On file at USACoE-NED
Initial Calibration Verification/ Continuing Calibration Verification	Hg: 80 to 120% recovery Other metals: 90 to 110% recovery	Yes		Retained at Lab
Initial Calibration Blank/ Continuing Calibration Blank	No target analytes > Instrument Detection Limit (IDL)	Yes		Retained at Lab
Standard Reference Materials	Within the limits provided by vendor	Yes		In Data Package
Method Blank	No target analytes > RL	Yes		In Data Package
Sample Spike/ Sample Duplicate	One set per group of field samples. Must contain all target analytes. Recovery Limits (75 to 125%; RPD < 20% or < 35%)	Yes		In Data Package
Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 30%)	No	L1735250-53 (WG1056189-5) As(142%), Cu(142%), Zn(142%)	In Data Package

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Table II-6: Quality Control Summary for Analyses of other Organic Chemicals not listed in Sediment, Tissue, and Water Matrices

Method Reference Numbers:

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Initial Calibration	Must be performed prior to the analysis of any QC sample or field sample (<20 % RSD for each compound)			Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)			In Data Package
Calibration Verification (Second Source)	Once, after initial calibration (80 to 120% recovery of each compound)			Retained at Lab
Continuing Calibration	At the beginning of every 12 hour shift ($\pm 15\%$ D)			Retained at Lab
Standard Reference Materials	Within the limits provided by vendor			In Data Package
Method Blank	No target analytes > RL			In Data Package
Matrix Spike/Matrix Spike Duplicate (MS/MSD)	One set (MS/MSD) per group of field samples. Must contain all target analytes. (Recovery Limits 50 to 120%; RPD <30%)			In Data Package
Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 30%)			In Data Package
Surrogate Recoveries	Calculate % recovery (30 to 150% recovery)			In Data Package
Internal Standard Areas (if applicable)	Within 50 to 200% of internal standards in continuing calibration check			In Data Package

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Table II-7: Quality Control Summary for Analyses of Sediment Grain Size and Total Organic Carbon

Method Reference Numbers:

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Grain Size: Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 25%)			In Data Package
Total Organic Carbon: Standard Reference Materials	Within the limits provided by vendor			In Data Package
Total Organic Carbon: Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD <30%)			In Data Package

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

Table II-8: Quality Control Summary for Biological Toxicity Testing only

Method Reference Numbers:

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Test condition requirements for each species: Temperature, Salinity, pH, D.O., Ammonia (Total, Un-ionized)	Test conditions within the requirements specified for each species			In Data Package
Test species age	Age/health within guidelines for each species (Appendix V)			In Data Package
Bulk physical/chemical analyses (If required by the Sampling plan)	Required? If so, performed? Yes or No			In Data Package
Water column toxicity test: Control mortality Control abnormality	 < 10% mean < 30% mussel/oyster; < 40% clam larvae, < 30% sea urchin larvae			In Data Package
Sediment toxicity test: Control mortality Compliance with applicable test acceptability requirements in Table 11.3 (EPA 1994a)	 < 10% mean (no chamber >20%) See EPA (1994a) Section 9; Table 11.3			In Data Package

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

LABORATORY STANDARDS STATEMENT

This study was performed by EnviroSystems, Incorporated at its facility in Hampton, New Hampshire. EnviroSystems' laboratory is accredited by the State of New Hampshire under the National Environmental Laboratory Accreditation (NELAC) program. Additionally, ESI is accredited under the Department of Defense (DoD) ELAP program, ISO/IEC 17025:2005, Certificate Number L2340. All testing conducted by EnviroSystems as part of this program was compliant with NELAC guidelines and standards. Additionally, this study was conducted in accordance with guidelines presented in the 2004 version of the New England District's Regional Implementation Manual (RIM) for Evaluation of Dredged Material Proposed for Disposal In New England Waters. Any deviations from specific elements of the RIM are detailed in the Protocol Deviation Section of this Report.

Suspended Particulate Phase Evaluation

1.0 INTRODUCTION

As part of a comprehensive plan to reduce adverse environmental impacts of ocean dumping, Section 103 of the Marine Protection, Research and Sanctuaries Act of 1972 specifies that all sediments to be discharged into ocean waters must be evaluated to define their potential impact on existing benthic communities. The United States Environmental Protection Agency (US EPA) has determined that the most effective means to make such an assessment is through the use of bioassay tests, which provide a relatively direct estimate of potential impact.

This project was designed to evaluate the potential toxicity of sediments from the area of dredging proposed for the New Haven Harbor Federal Navigation Project (FNP) located in New Haven, Connecticut. Testing involved conduct of Suspended Particulate Phase (SPP) assays using the mysid, *Americamysis bahia*, inland silverside minnow, *Menidia beryllina*, and larvae of the sea urchin, *Arbacia punctulata*. Testing followed procedures established by the US EPA and the US Army Corps of Engineers (US ACE) for testing of dredged material, including *Regional Implementation Manual for Evaluation of Dredged Material Proposed for Disposal in New England Waters* (US EPA, CENAE 2004), *Evaluation of Dredged Material Proposed for Ocean Disposal - Testing Manual* (US EPA, US ACE 1991) and *Evaluation of Dredged Material Proposed for Discharge in Waters of the US - Testing Manual* (US EPA, US ACE 1998).

2.0 MATERIALS AND METHODS

2.1 Sample Collection, Preservation and Storage

Sediment cores for toxicological analysis were collected by AECOM, Chelmsford, Massachusetts using vibracoring equipment from locations identified in the dredge footprint specified in the project Sampling and Analysis Plan (AECOM, 2017). Project site water and sediment samples were received under chain of custody in 5 gallon polyethylene buckets for sediment and in carboys for water. Site sediment samples were composited based on the compositing scheme provided by AECOM's team. Reference site samples were also collected by AECOM from the Central Long Island Sound Disposal Site (CLDS). Upon arrival at the laboratory, all samples received an internal sample control number and were logged into the project sample control system. Prior to testing, samples were placed in a secure refrigerator and stored at a temperature of $4 \pm 2^{\circ}\text{C}$ until test initiation. Sample identification, collection and receipt information is summarized in Table 1. Sample compositing information is provided in Table 2.

Water for the internal laboratory control was obtained from the Hampton Estuary, Hampton, New Hampshire. Water from this source has been used for culture and maintenance of test organisms at ESI since 1978. Seawater is obtained through a filter system located on the bottom of the estuary at a point approximately 1 mile from the open ocean. The estuary receives no direct industrial discharges.

2.2 Elutriate Sample Preparation

The elutriate sample was prepared by placing one volume of test sediment and four volumes of

overlying site water in a stainless steel container and mixing with a mechanical stirring device for 30 minutes. Speed of the stirring motor was set so that the sample did not cavitate, entrain air, and oxidize the sample. After mixing, the sediment and water mixture was allowed to settle for an hour. The resulting supernatant solution was then removed by siphon and centrifuged before being submitted for biological and chemical evaluation. A summary of the elutriate preparation is provided in Table 3.

Test concentrations were mixed by diluting the elutriate sample with the overlying water collected from the CLDS reference site. Test concentrations for all assays were 1%, 10%, 50% and 100% (undiluted elutriate). The diluent control was included to verify the relative toxicity of the reference site, and the Hampton Estuary control was included to verify the relative health of the test organisms.

2.3 Test Species

A. bahia were ≤ 5 days old and were obtained from cultures maintained by Aquatic Research Organisms (ARO), Hampton, New Hampshire. *M. beryllina* were 9-14 days old at the start of the assay and were obtained from Aquatic BioSystems, Inc., (ABS), Fort Collins, Colorado for the Round 1 assay, and from ARO for the Round 2 assay. Prior to use, test organisms were held for a minimum of 2 hours under temperature, salinity, and photoperiod conditions similar to those used in the assay. Organisms were transferred to test vessels using a large bore pipet to minimize the amount of water added to test solutions.

Adult *A. punctulata* were from cultures maintained by ESI. Original stock was obtained from a commercial supplier. Adult sea urchins are maintained in the laboratory for as long as they are viable. Male and female urchins are maintained in separate chambers at a temperature of approximately $12 \pm 3^\circ\text{C}$ after spawning.

2.4 Suspended Particulate Phase Assays

The toxicity tests were completed on a total of 8 elutriate samples that were split into two groups of 4 and analyzed in two separate rounds of assays with staggered start dates, each with their own respective laboratory control samples and reference samples. These tests are hereafter referred to as Rounds 1 and 2, and their periods of assay conduct are summarized in Table 4.

2.4.1 SPP Evaluations - *A. bahia* and *M. beryllina*

The 96 hour static acute toxicity tests were conducted at $20 \pm 2^\circ\text{C}$ with a photoperiod of 16:8 hours light:dark. Test chambers were 250 mL beakers containing 200 mL of test solution in each of 5 replicates with 10 organisms/replicate. Survival in all test replicates was recorded after 1, 24, 48, 72, and 96 hours of exposure. Dissolved oxygen, pH, temperature and salinity were measured daily in one replicate of each treatment. *A. bahia* and *M. beryllina* were fed twice daily throughout testing.

2.4.2 Embryo Survival and Development SPP Evaluation - *A. punctulata*

The *A. punctulata* embryo survival and development assays were conducted at $20 \pm 1^\circ\text{C}$ with a photoperiod of 16:8 hours light:dark. Test chambers for the acute assays were 250 mL glass beakers containing 200 mL test solution in each of 5 replicates. Dissolved oxygen, pH, temperature and salinity were measured in one replicate of each treatment at the start and end of the test. Gametes were obtained by potassium chloride injection to induce spawning. Gametes were collected and diluted with filtered laboratory seawater to yield approximate stock concentrations. Measured aliquots of gamete stock solutions were combined, fertilization success was monitored 15 minutes later, and the density of embryos was calculated. Sufficient embryos were removed from the stock solution and added to each test vessel to achieve a final concentration of approximately 25 to 35 embryos/mL of solution. Prior to transferring embryos from the holding vessel to the individual test vessels, the embryo stock solution was thoroughly homogenized to ensure even distribution. Embryo counts in three surrogate vessels were conducted just after the addition of the embryos to determine the actual embryo concentrations in the final elutriate solutions.

Observations in surrogate vessels were also used to determine the test endpoint. The test is terminated when approximately 90% of the fertilized embryos in the control vessels have reached the pluteus larval stage (between 48 and 96 hours). The tests were then terminated and 5 mL aliquots of each test replicate were preserved with 10% buffered formalin solution. All larvae in the 5 mL aliquot were counted to determine survival and normal development.

2.5 Data Analysis

As appropriate, statistical analysis of acute and chronic exposure data was completed using CETIS™ (Comprehensive Environmental Toxicity Information System) version 1.9.3.0 software. The program computes acute exposure endpoints based on US EPA decision tree guidelines specified in individual test methods. Statistical significance was accepted at $\alpha = 0.05$.

2.6 Quality Control

As part of the laboratory quality control program, standard reference toxicant assays are conducted on a regular basis for each test species. These results provide relative health and response data while allowing for comparison with historic data sets. Summaries of reference toxicant assays conducted in support of this study are provided in Table 5.

3.0 RESULTS AND DISCUSSION

A summary of endpoints for each species is provided in Table 6. Water quality characteristics are summarized in Table 7. Laboratory bench sheets, water quality data, and associated statistical support data are included in Appendix A.

3.1 SPP Evaluations - *A. bahia* Round 1

At the end of the 96 hour exposure period, *A. bahia* survival was 100% in the Hampton Estuary laboratory control and 98% in the CLDS reference water treatment. This meets the minimum test acceptability criteria of $\geq 90\%$ survival in the laboratory control and is an indication that the test organisms were healthy and not stressed by handling. These data are considered valid for evaluating impacts associated with elutriate samples.

Review of data collected at the end of the assay documented that the mysid LC-50s in site composite elutriate solutions 1, 2, 3, and 4 were all $>100\%$.

3.2 SPP Evaluations - *A. bahia* Round 2

At the end of the 96 hour exposure period, *A. bahia* survival was 100% in the Hampton Estuary laboratory control and 100% in the CLDS reference water treatment. This meets the minimum test acceptability criteria of $\geq 90\%$ survival in the laboratory control and is an indication that the test organisms were healthy and not stressed by handling. These data are considered valid for evaluating impacts associated with elutriate samples.

Review of data collected at the end of the assay documented that the mysid LC-50 in site composite elutriate solution 5 was $>100\%$. Site composite elutriate solutions 6, 7 and 8 caused significant adverse effects on mysid survival with LC-50s of 68%, 65% and 84%, respectively.

3.3 SPP Evaluations - *M. beryllina* Round 1

At the end of the 96 hour exposure period, *M. beryllina* survival was 100% in the Hampton Estuary laboratory control and 96% in the CLDS reference water treatment. This meets the minimum test acceptability criteria of $\geq 90\%$ survival in the laboratory control and is an indication that the test organisms were healthy and not stressed by handling. These data are considered valid for evaluating impacts

associated with elutriate samples.

Review of data collected at the end of the assay documented that the minnow LC-50s in site composite elutriate solutions 1, 2, 3, and 4 were all >100%.

3.4 SPP Evaluations - *M. beryllina* Round 2

At the end of the 96 hour exposure period, *M. beryllina* survival was 96% in the Hampton Estuary laboratory control and 100% in the CLDS reference water treatment. This meets the minimum test acceptability criteria of $\geq 90\%$ survival in the laboratory control and is an indication that the test organisms were healthy and not stressed by handling. These data are considered valid for evaluating impacts associated with elutriate samples.

Review of data collected at the end of the assay documented that site composite elutriate solutions 5, 6, 7 and 8 all caused significant adverse effects on minnow survival with LC-50s of 78%, 46%, 48% and 72%, respectively.

3.5 SPP Evaluations - *A. punctulata* Round 1

Counts made in the Hampton Estuary laboratory surrogate test vessels at the initiation of the *A. punctulata* assay indicated an average initial embryo concentration of 155 embryos/5mL, equal to approximately 31 embryos/mL. The assay was terminated after 67 hours exposure when it was determined that the majority of the larvae (>90%) had reached the pluteus larval stage. Embryo counts in the Hampton Estuary laboratory control treatment showed 83% of the embryos survived at the end of the assay. Of the original embryos, 83% were normally developed pluteus larvae. Embryo counts in the CLDS reference site water showed 88% of the embryos survived and 86% were normally developed at the end of the assay. This meets the minimum test acceptability criteria of $\geq 70\%$ embryo survival and $\geq 70\%$ normal development in the laboratory control sample.

Review of the data collected at the end of the assay indicate that all the site composite elutriate solutions except composite 1 elutriate had significant negative impacts on embryonic survival and/or development, with LC-50s ranging from 18-21% for survival and with EC-50s ranging from 4-17% for development.

3.6 SPP Evaluations - *A. punctulata* Round 2

Counts made in the Hampton Estuary laboratory surrogate test vessels at the initiation of the *A. punctulata* assay indicated an average initial embryo concentration of 159 embryos/5mL, equal to approximately 32 embryos/mL. The assay was terminated after 48 hours exposure when it was determined that the majority of the larvae (>90%) had reached the pluteus larval stage. Embryo counts in the Hampton Estuary laboratory control treatment showed 76% of the embryos survived at the end of the assay. Of the original embryos, 72% were normally developed pluteus larvae. Embryo counts in the CLDS reference site water showed 74% of the embryos survived and 71% were normally developed at the end of the assay. This meets the minimum test acceptability criteria of $\geq 70\%$ embryo survival and $\geq 70\%$ normal development in the laboratory control sample.

Review of the data collected at the end of the assay indicate that all the site composite elutriate solutions had significant negative impacts on embryonic survival and/or development, with LC-50s ranging from 9-35% for survival and with EC-50s ranging from 1-4% for development.

3.7 Protocol Deviations

Review of the data collected for these assays documented a few minor deviations from the method protocol and/or ESI's standard procedures. The protocol requires that the assays be conducted at $20 \pm 2^\circ\text{C}$ for the *A. bahia* and *M. beryllina* assays, and $20 \pm 1^\circ\text{C}$ for the *A. punctulata* assay. Although the assays

were, for the most part, maintained in incubators set at their target temperatures, some temperatures recorded during the assays fell outside of the protocol range due to the ambient laboratory temperature at the time that dilutions were mixed and water quality measurements were taken. These species can tolerate temperatures within the ranges measured, and US EPA protocol allows temperatures of $25 \pm 2^\circ\text{C}$ for these species. It was noted that the incubator for the Round 1 mysid assays was initially set too high but was corrected and possibly over-compensated the next day. It is the opinion of ESI's technical director that these deviations had no adverse impact on the outcome of the assay.

In addition, the protocol requires that the assays be conducted at $30 \pm 2\%$. It is not uncommon for the salinity to drift upwards during assay conduct due to evaporation and exceed the protocol requirement, but the salinities are adjusted daily as needed to account for this occurrence. In a few instances of the Round 1 mysid assay, the measured salinity was slightly below the acceptable range. It is the opinion of ESI's technical director that these deviations had no adverse impact on the outcome of the assay.

Last, due to technician oversight ammonia samples were not collected for analysis at assay initiation for the laboratory control or CLDS reference samples. Likewise, during Round 2 of the minnow and mysid assays the final ammonia samples were not collected for analysis. Rather, ammonia samples were taken from the 50% test concentration when the assays were terminated at 96 hours. Similarly, ammonia samples were not collected at the end of the Round 2 urchin assays. While these occurrences represent a data gap and a deviation from ESI's internal protocol, it is the opinion of ESI's technical director that these deviations had no adverse impact on the outcome of the assay.

3.8 Summary

This program utilized protocols developed by the USEPA and the CENAE to assess the potential impact of the proposed dredge material collected from New Haven Harbor would have on the marine environment. Review of the data documents that there were no significant effects on any of the tested organisms following exposure to the undiluted elutriate solution from composite 1. In addition, there were no adverse effects on mysid or minnow survival after exposure to the undiluted elutriate solutions from composites 2 through 4. However, significant adverse effects on mysid and/or minnow survival occurred following exposure to composite 5 through 8 elutriate solutions, and composite 2 through 8 elutriate solutions had significant negative effects on urchin larval survival and/or development.

A notable amount of total ammonia (>10 mg/L) was observed in composites 2, 3, 4, 5, 6, 7, and 8 elutriate solution at the start of the assays. US EPA guidance suggests ammonia, generally in the unionized form, can be a source of toxicity when total ammonia values are >5 mg/l (USEPA 2002). US EPA Ambient Water Quality Criteria (AWQC) for unionized ammonia in saltwater references LC-50 values for two of the species tested: *A. bahia* (1.04 mg/L) and *M. beryllina* (0.88 mg/L) (USEPA 1989). AWQC for unionized ammonia in saltwater are not available for *A. punctulata*, however effects levels are available in the literature for urchin species ranging from 0.06 mg/L for an EC-50 for development (Maguire Group Inc., 2003) to approximately 0.336 mg/L for a 96-hour LC-50 (Chang-Hoon Lee et al., 2013). Calculated unionized ammonia values from the start of the assays for these composites and species ranged between 0.5 to 2.1 mg/L (*A. bahia*), 0.4 to 2.1 mg/L (*M. beryllina*) and 0.4 to 1.9 mg/L (*A. punctulata*). Consequently, it is possible that any observed toxicity in these composites is a product of total and unionized ammonia content.

Comp 8 Elutriate	7.91	8.16	30	30	40	1.3	b	b

Note:

^a There was complete mortality before 96 hours, therefore water quality measurements were not taken. The last measured pH and temperature values were used for un-ionized ammonia calculations instead. Due to the complete mortality that occurred prior to 96 hours, ammonia samples were collected from the 50% test concentration.

^b Due to an oversight, ammonia samples were not collected at the start of any assays for the laboratory control and CLDS reference site, or at the end of the *A. punctulata* assay.

SAMPLE RECEIPT AND CONDITION DOCUMENTATION

Page 1 of 1

STUDY NO: 29516
SDG No:
Project: FNP: New Haven Harbor
Delivered via: Client
Date and Time Received: 08/18/17 1300 Date and Time Logged into Lab: NA
Received By: JTP Logged into Lab by: KC 
Air bill / Way bill: No Air bill included in folder if received? NA
Cooler on ice/packs: No Custody Seals present? NA
Cooler Blank Temp (C) at arrival: NA Custody Seals intact? NA
Number of COC Pages: 3
COC Serial Number(s): See CoCs
COC Complete: Yes Does the info on the COC match the samples? No
 Sampled Date: Yes Were samples received within holding time? Yes
 Field ID complete: Yes Were all samples properly labeled? No
 Sampled Time: Yes Were proper sample containers used? Yes
 Analysis request: No Were samples received intact? (none broken or leaking) No
COC Signed and dated: Yes Were sample volumes sufficient for requested analysis? Yes *
Were all samples received? Yes Were VOC vials free of headspace? NA
Client notification/authorization: Not required pH Test strip ID number: _____

Field ID	Lab ID	Mx	Analysis Requested	Bottle	Req'd Pres'n	Verified Pres'n
See Chains of Custody						

Notes and qualifications:

-Majority of samples not listed on chains of custody based on container sampling information. Samples rejected and on hold until further notice.
* Residual samples from grain size analyses received to include in final composites
-Field ID NHH-Q and NHH-U presented on the associated chains of custody for this sample receipt document (ESI samples -054 and -055) were accurately denoted based on sample containers, and were not present on revised chains of custody issued by AECOM on 08/21/17.

* On day samples were dropped off, chains of custody provided did not correspond to sampling information on individual sample containers. As a result, samples were rejected and stored at 4 C. AECOM staff were present at ESI on 08/21/17 and revised chains of custody to encompass all samples received. Samples were subsequently accepted and processed. One container of -049 was leaking and was exchanged into viable containers upon receipt. Compositing information was relayed by AECOM staff, as no formal compositing scheme was provided to ESI. Residual sample from grain size analyses were utilized in sample compositing, as per AECOM.

Laboratory Composite Preparation Documentation

Project Number: 29516
 Project Name: New Haven Harbor
 Composite Identifier: Composite 1
 Composite Lab ID.: 29517-001 Composite Final Volume: 22 gallons
 Composite Matrix: Solid Composite Container(s): 5x5 gallon buckets
 Composite Prepared Date: 08/21/17 1x1 gallon bucket
 Composite Prepared Time: 0840
 Initials: BG/JTP
 Protocol: ESI SOP 1478

This composite was prepared according to protocols cited using the samples and amounts listed below:

Field ID	ESI Lab ID	Matrix	Liquids Excluded	Solids Excluded	Amount Added	Notes
NHH-C	29516-027	Solid	—	≈ 2.5 gal/bag	≈ 24.5 gal/bag	gray to black sediment with lots of shell hash
↓	↓ -028	↓	↓	↓	↓	

Subsamples Removed:

Lab Number	Sample Use
29519	10-Day Solid Phase <i>L. plumulosus</i>
29520	10-Day Solid Phase <i>A. bahia</i>
29521	Elutriate Preparation
29524	28-Day Bio-accumulation <i>M. nasuta</i>
29525	28-Day Bio-accumulation <i>N. virens</i>

Laboratory Composite Preparation Documentation

Project Number: 29516
 Project Name: New Haven Harbor
 Composite Identifier: Composite 2
 Composite Lab ID.: 29517-002 Composite Final Volume: ≈ 28^{gallons} ^{ESD 08/21}
 Composite Matrix: Solid Composite Container(s): 5x5 gallon buckets
 Composite Prepared Date: 08/11/17 1x1 gallon bucket
 Composite Prepared Time: 0950
 Initials: RF JTP
 Protocol: ESI SOP 1478

This composite was prepared according to protocols cited using the samples and amounts listed below:

Field ID	ESI Lab ID	Matrix	Liquids Excluded	Solids Excluded	Amount Added	Notes
NHH-D	29516-029 030	Solid	—	—	≈ 10 gallons	
NHH-E	↓ - 033 034	Solid	—	≈ 7 ^{gallons} ^{ESD 08/21}	≈ 7 gallons	
NHH-F	↓ - 009 010	Solid	—	—	≈ 10 gallons	

Subsamples Removed:

Lab Number	Sample Use
29519	10-Day Solid Phase <i>L. plumulosus</i>

Aquatic Research Organisms

DATA SHEET

I. Organism History

Species AMERICAMYSIS bahia

Source: Lab reared _____ Hatchery reared _____ Field collected _____

Hatch date 8-19-17 Receipt date _____Lot number 081917MS Strain _____Brood origination FLORIDA

II. Water Quality

Temperature 25 °C Salinity ~28 ppt D.O. _____ ppmpH 7.8 su Hardness _____ ppm Alkalinity _____ ppm

III. Culture Conditions

Freshwater _____ Saltwater ☒ Other _____Recirculating ☒ Flow through _____ Static renewal _____DIET: Flake food ☒ Phytoplankton _____ Trout chow _____Artemia ☒ Rotifers _____ YCT _____ Other ENCAP SHRIMP DIET

Prophylactic treatments: _____

Comments: _____

IV. Shipping Information

Client: EST # of Organisms 1800+Carrier: _____ Date shipped 8-22-17Biologist: Mark DossingerPO BOX 1271 HAMPTON NH 03843-1271 (603) 926-1650 AROFISH@AOL.COM

EMBRYO WORKSHEET

DATE: 08/25/17

ESI STUDY: 29523

CLIENT: AECOM

PROJECT: New Haven

Round 1 Redo

Eggs Collected @: 1520

Pre-assay fertilization check: 96/100 ANALYST: GRS

Sperm Collected @: 1520

A mated subsample of egg+sperm must achieve ≥90% fertilization in order to be used in testing.

Egg Stock Suspension Count:

Take 1mL of egg stock suspension and using a glass graduated cylinder dilute with seawater to a final volume of 100 mL. Count a subsample of the diluted suspension to get an estimate of the egg concentration. The diluted suspension should have 40 - 50 eggs/mL, (which would represent an egg concentration of 4,000 - 5,000 in the stock suspension.)

Egg Count (per mL) of diluted suspension: 40 /mL

Sperm Stock Suspension Count:

GRS 0829
Individual sides not recorded

Once added to the egg stock, the final sperm concentration should be 1×10^5 - 1×10^7 in solution D.

1. Hemocytometer Count (D):

2. Hemocytometer Count (D):

Average Count (D): 246 $\times 10^4$ = spm solution D = 2.46×10^6

Sperm Concentrations: Solution D X 40 = Solution A = 9.84×10^7

Solution D X 20 = Solution B = 4.92×10^7

Solution D X 5 = Solution C = 1.23×10^8 GRS 0829

Sperm Count (per mL): 2.46×10^6

mL of Eggs to Add: 125

mL of Sperm to Add: 19

Gametes mixed @: 1553

Gametes must be mixed within 1 hour of collection.

Calculated Embryo Stock Concentration (per mL): 3480

Calculated Embryo Stock (mL) needed per chamber: 6000

The test concentration should be 15 - 30 embryos per mL.

Add calculated amount of embryo stock to a surrogate chamber, gently mix, then count a 5mL aliquot.

Embryo Concentration Check: 151

If the check concentration is acceptable, then proceed with embryo addition to the test.

Volume Embryo Stock (mL) added to test solutions: 1.72

Embryos Added to Test Solutions @: 1600

INITIAL COUNTS: Embryos/ 5 mL

SURROGATE A 151

SURROGATE B 153

SURROGATE C 160

Mean: 155

Organism Lot ID: 99A_PARO062017

Mean per mL: 51 31 GRS 0829

EMBRYO WORKSHEET

DATE: 08/23/17

ESI STUDY: 29523

CLIENT: AECOM

PROJECT: New Haven

Eggs Collected @: 1610

Pre-assay fertilization check: 92/100

ANALYST: GRS

Sperm Collected @: 1605

A mated subsample of egg+sperm must achieve $\geq 90\%$ fertilization in order to be used in testing.

Egg Stock Suspension Count:

Take 1mL of egg stock suspension and using a glass graduated cylinder dilute with seawater to a final volume of 100 mL. Count a subsample of the diluted suspension to get an estimate of the egg concentration. The diluted suspension should have 40 - 50 eggs/mL, (which would represent an egg concentration of 4,000 - 5,000 in the stock suspension.)

Egg Count (per mL) of diluted suspension: 4000

Sperm Stock Suspension Count:

1. Hemocytometer Count (D):

2. Hemocytometer Count (D):

Average Count (D):

Sperm Concentrations:

Solution D X 40 E

Solution D X 20 E

Solution D X 5 E

$\times 10^4$

=

Once added to the egg stock, the final sperm concentration should be $1 \times 10^5 - 1 \times 10^7$ in solution D. E

Solution A =

Solution B =

Solution C =

Sperm Count (per mL):

mL of Eggs to Add:

mL of Sperm to Add:

Gametes mixed @:

Gametes must be mixed within 1 hour of collection.

Calculated Embryo Stock

Concentration (per mL):

Calculated Embryo Stock (mL)

needed per chamber:

The test concentration should be 15 - 30 embryos per mL.

Add calculated amount of embryo stock to a surrogate chamber, gently mix, then count a 5mL aliquot.

Embryo Concentration Check:

If the check concentration is acceptable, then proceed with embryo addition to the test.

Volume Embryo Stock (mL)

added to test solutions:

Embryos Added to Test

Notes:

^a There was complete mortality before 96 hours, therefore water quality measurements were not taken. The last measured pH and temperature values were used for unionized ammonia calculations instead. Due to the complete mortality that occurred prior to 96 hours, ammonia samples were collected from the 50% test concentration.

^b Due to an oversight, ammonia samples were not collected at the end of the *A. punctulata* assay.

Table II-1: Completeness Checklist

Quality Assurance/Quality Control Questions	Yes/No? Comments?
1. Was the report signed by the responsible applicant approved representative?	Yes
2. Were the methods for sampling, chemical and biological testing described in the Sampling and Analysis Plan (SAP) and the Laboratory QA Plan (LQAP) followed?	NA, No SAP available. Methods followed per RIM requirements.
3. If not, were deviations documented?	NA
4. Was the SAP approved by the New England District?	NA
5. Did the applicant use a laboratory with a LQAP on file at the New England District?	Yes
6. Did the samples adequately represent the physical/chemical variability in the dredging area?	Yes
7. Were the correct stations sampled (include the precision of the navigation method used)?	NA, cores collected by prime contractor
8. Were the preservation and storage requirements in Chapter 8 of the EPA/Corps QA/QC Manual (EPA/USACE 1995) and EPA (2001d) followed?	Yes
9. Were the samples properly labeled?	Yes, see revised COC
10. Were all the requested data included?	Yes
11. Were the reporting limits met?	Yes
12. Were the chain-of-custody forms properly processed?	Yes, see revised COC
13. Were the method blanks run and were the concentration below the acceptance criteria?	NA
14. Was the MDL study performed on each matrix (with this data submission) or within the last 12 months?	NA
15. Were the SRM/CRM analyses within acceptance criteria?	NA
16. Were the matrix spike/matrix spike duplicates run at the required frequency and was the percent recovery/RPD within the acceptance criteria?	NA
17. Were the duplicate samples analyzed and were the RPDs within the required acceptance criteria?	NA
18. For each analytical fraction of organic compounds, were recoveries for the internal standard within the acceptance criteria?	NA
19. Were surrogate recoveries within the required acceptance criteria?	NA
20. Were corrective action forms provided for all non-conforming data?	NA
21. Were all the species-specific test conditions in Appendix V met?	Yes, except as noted for temperature and salinity.
22. Were the test-specific age requirements met for each test species?	Yes
23. Was the bulk physical/chemical testing performed on the sediments/composites that were biologically tested?	Yes
24. Were the mortality acceptance criteria met for the water column and sediment toxicity tests?	Yes
25. Were the test performance requirements in Table 11.3 of EPA (1994a) met?	Yes

Table II-8: Quality Control Summary for Biological Toxicity Testing only

Method Reference Numbers:

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Test condition requirements for each species: Temperature, Salinity, pH, D.O., Ammonia (Total, Un-ionized)	Test conditions within the requirements specified for each species	Yes, except as noted for temperature and salinity.	Round 1 <i>A. bahia</i> temperature and salinity outside of acceptable range.	Section 3.7 and Appendix A
Test species age	Age/health within guidelines for each species (Appendix V)	Yes		Appendix A
Bulk physical/chemical analyses (If required by the Sampling plan)	Required? If so, performed? Yes or No	Yes		Data Package (separate cover)
Water column toxicity test: Control mortality Control abnormality	$\leq 10\%$ mean $\leq 30\%$ mussel/oyster; $\leq 40\%$ clam larvae, $\leq 30\%$ sea urchin larvae	Yes		Appendix A
Sediment toxicity test: Control mortality Compliance with applicable test acceptability requirements in Table 11.3 (EPA 1994a)	$\leq 10\%$ mean (no chamber $> 20\%$) See EPA (1994a) Section 9; Table 11.3	NA		

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

LABORATORY STANDARDS STATEMENT

This study was performed by EnviroSystems, Incorporated at its facility in Hampton, New Hampshire. EnviroSystems' laboratory is accredited by the State of New Hampshire under the National Environmental Laboratory Accreditation (NELAC) program. Additionally, ESI is accredited under the Department of Defense (DoD) ELAP program, ISO/IEC 17025:2005, Certificate Number L2340. All testing conducted by EnviroSystems as part of this program was compliant with NELAC guidelines and standards. Additionally, this study was conducted in accordance with guidelines presented in the 2004 version of the New England District's Regional Implementation Manual (RIM) for Evaluation of Dredged Material Proposed for Disposal In New England Waters. Any deviations from specific elements of the RIM are detailed in the Protocol Deviation Section of this Report.

10 Day Solid Phase Evaluation

1.0 INTRODUCTION

As part of a comprehensive plan to reduce adverse environmental impacts of ocean dumping, Section 103 of the Marine Protection, Research and Sanctuaries Act of 1972 specifies that all sediments to be discharged into ocean waters must be evaluated to define their potential impact on existing benthic communities. The United States Environmental Protection Agency (US EPA) has determined that the most effective means to make such an assessment is through the use of bioassay tests, which provide a relatively direct estimate of potential impact.

This project was designed to evaluate the potential toxicity of sediments from the area of dredging proposed for the New Haven Harbor Federal Navigation Project (FNP) located in New Haven, Connecticut. Testing involved conduct of acute exposure 10 day solid phase assays using the mysid, *Americamysis bahia*, and the amphipod, *Leptocheirus plumulosus*. Testing followed procedures established by the US EPA and the United States Army Corps of Engineers (US ACE) for testing of dredged material. Procedures are presented in *Evaluation of Dredged Material Proposed for Ocean Disposal* (US EPA, US ACE 1991), *Evaluation of Dredged Material Proposed for Discharge in Waters of the US - Testing Manual* (US EPA, US ACE 1998), and the *Regional Implementation Manual for Evaluation of Dredged Material Proposed for Disposal in New England Waters* (US EPA, CENAE, 2004).

2.0 MATERIALS AND METHODS

2.1 Sample Collection, Preservation and Storage

Sediment cores for toxicological analysis were collected by AECOM, Chelmsford, Massachusetts using vibracoring equipment from locations identified in the dredge footprint specified in the project Sampling and Analysis Plan (AECOM, 2017). Sediment samples were received under chain of custody in 5 gallon polyethylene buckets, and were composited based on the compositing scheme provided by AECOM's team. Reference site samples were also collected by AECOM from the Central Long Island Sound Disposal Site (CLDS). Upon arrival at the laboratory, all samples received an internal sample control number and were logged into the project sample control system. Prior to testing, samples were placed in a secure refrigerator and stored at a temperature of $4 \pm 2^{\circ}\text{C}$ until test initiation. Sample identification, collection and receipt information is summarized in Table 1. Sample compositing information is provided in Table 2.

Sediment for the laboratory control treatment was collected from the Hampton Estuary, Hampton, New Hampshire. The area is not known to receive any direct industrial inputs and has been used as a laboratory reference sediment in the testing of marine sediments for over 25 years. Overlying seawater was obtained from the Hampton Estuary. Water from the estuary has been used for the culture and maintenance of test organisms at ESI since 1978. Seawater is obtained through a filter system located on the bottom of the estuary at a point approximately 1 mile from the open ocean.

2.2 Sediment Preparation

Before organisms were added to the test vessels, ammonia levels in the pore water were determined. If the pore water was found to contain an unionized ammonia level of ≥ 0.8 mg/L, then test initiation was delayed and the sediments were monitored until the ammonia levels achieved an acceptable level. Test chambers were renewed daily with 1 volume addition of overlying water during this pre-assay phase.

2.3 Bioassay Procedures

2.3.1 *A. bahia* 10 Day Solid Phase Evaluation

The 10 day exposure toxicity test was completed using *A. bahia* obtained from Aquatic Resource Organisms (ARO) of Hampton, New Hampshire. Prior to use, test organisms were held for a minimum of 2 hours under temperature, salinity, and photoperiod conditions similar to those used in the assay. *A. bahia* used in the assay were ≤ 5 days old at the start of the test.

The assay was conducted in a static renewal mode. Test chambers were 1 liter beakers modified for static renewal testing. Each beaker contained approximately 2 cm of sediment and was filled to the 1 liter mark with seawater. The test chambers were allowed to stabilize for a minimum of 24 hours, or until overlying water unionized ammonia levels were within acceptable limits (≤ 0.6 mg/L at pH 7.9-8.0) prior to the addition of the test organisms. A total of 20 organisms were randomly selected from the lot received and added to each replicate. All treatment groups included 5 replicates. Each day during the test, chambers received 1 volume of new seawater having similar salinity and temperature as the overlying water in the vessels. This results in an approximate 50% renewal of overlying water. Water temperature was $20 \pm 1^\circ\text{C}$, and the salinity regimen was established at $30 \pm 2\text{‰}$. The photoperiod was set at 16:8 hours light:dark. Dissolved oxygen, pH, salinity, specific conductivity and temperature were measured daily in one replicate of each treatment and in all replicates on days 0 and 10. Ammonia levels were measured in the overlying water of a representative test chamber on days 0, 3 and 10. All test chambers were aerated throughout the assay and dissolved oxygen levels were maintained at ≥ 6.0 mg/L per ESI's protocol ($\geq 40\%$ saturation following RIM protocol). Water quality measurements were completed prior to water renewals. Test chambers were observed daily to ensure proper aeration and to note any test or treatment abnormalities. Any such observations were recorded on data sheets. Mysids were fed ≤ 24 hour old *Artemia* nauplii twice daily. After 10 days of exposure, the organisms were recovered for survival counts.

2.3.2 *L. plumulosus* 10 Day Solid Phase Evaluation

L. plumulosus were obtained from cultures maintained by ARO. Prior to use, test organisms were held for a minimum of 2 hours under temperature, salinity, and photoperiod conditions similar to those used in the assay. *L. plumulosus* were non-reproductive adults.

The assay was conducted in a static renewal mode. Test chambers were 1 liter beakers modified for static renewal testing. Each beaker contained approximately 2 cm of sediment and was filled to the 1 liter mark with seawater. The test chambers were allowed to stabilize for a minimum of 24 hours, or until pore water unionized ammonia levels were within acceptable limits (≤ 0.8 mg/L) prior to the addition of the test organisms. A total of 20 organisms were randomly selected from the lot received and added to each replicate. Each treatment group included 5 replicates and a surrogate test chamber that was used to obtain water qualities during the assay without disturbing the test animals. The surrogate chamber was treated the same as actual test chambers with the addition of animals and food, but was not used to determine endpoint data. Each day during the test, chambers received 1 volume of new seawater having similar salinity and temperature as the overlying water in the vessels. This results in an approximate 50% renewal of overlying water. Water temperature was $20 \pm 1^\circ\text{C}$, and the salinity regimen was established at $20 \pm 2\text{‰}$. The photoperiod was set at 16:8 hours light:dark. Dissolved oxygen, pH, salinity, specific conductivity and temperature were measured daily in the surrogate replicate of each treatment and in all replicates on days 0 and 10. Ammonia levels were measured in the overlying and pore water of the surrogate test chamber on days 0, 3 and 10. All test chambers were aerated throughout the assay and dissolved oxygen levels were

maintained at ≥ 6.0 mg/L per ESI's protocol ($\geq 40\%$ saturation following RIM protocol). Water quality measurements were completed prior to water renewals. Test chambers were observed daily to ensure proper aeration and to note any test or treatment abnormalities. Any such observations were recorded on data sheets. After 10 days of exposure, the organisms were recovered for survival counts.

2.4 Statistical Analysis

Survival data were analyzed using CETIS™ (Comprehensive Environmental Toxicity Information System) v1.9.3.0 software to determine significant differences between the project sediments and the reference site. Survival data were evaluated to determine homogeneity of sample variances and normality of distribution using appropriate statistics. Data sets were subsequently evaluated using the appropriate parametric or non-parametric Analysis of Variance (ANOVA) statistic. Pair-wise comparisons were based on the appropriate statistical analysis. Statistical difference was evaluated at $\alpha = 0.05$.

2.5 Quality Control

As part of the laboratory quality control program, standard reference toxicant assays are conducted on a regular basis for each test species. These results provide relative health and response data while allowing for comparison with historic data sets. Summaries of acute exposure reference toxicant assays conducted in support of this study are provided in Table 3.

3.0 RESULTS AND DISCUSSION

Table 4 provides a summary of assay acceptability and laboratory control performance. Tables 5 and 6 summarize the results of the statistical analysis for *Americamysis bahia* (mysid) and *Leptocheirus plumulosus* (amphipod), respectively. Tables 7 and 8 summarize water quality data collected during the *A. bahia* and *L. plumulosus* assays. Laboratory bench sheets, water quality data, and associated statistical support data are included in Appendix A.

3.1 *A. bahia* 10 Day Solid Phase Evaluation

Mean mysid survival in the laboratory control sediment was 92% with a coefficient of variation (CV) of 6%. Assay protocol requires that mean control survival be $\geq 90\%$. Based on this, the mysids were considered healthy and the overlying water was determined to have had no adverse impact on the outcome of the assay. Mean survival in the CLDS reference sediment was 98% with an associated CV of 5%.

Mean mysid survival in the site composites ranged from 74% (Composite 6) to 96% (Composite 8), and the statistical analyses show that there were negative effects on survival for mysids exposed to site Composite samples 1, 5 and 6 as compared to mysids exposed to the CLDS reference sediment. The difference in survival from the CLDS reference sediment was $<20\%$ for Composite samples 1 and 5, however it was $>20\%$ for Composite sample 6.

Temperature data collected during the daily water quality observations documented a mean value of 20.5°C with a range of 19.5 to 22.1°C . Confirmation temperature data collected on an hourly basis from a data logger documented a mean value of 20.8°C with a range of 19.6 to 29.6°C . Salinity levels ranged from 29.0 to 31.8‰ with a mean value of 30.1‰ . Test acceptability criteria requires a mean temperature of $20 \pm 1^{\circ}\text{C}$ with maximum temporary fluctuations of $20 \pm 3^{\circ}\text{C}$, and salinity within a range of $30 \pm 2\text{‰}$. See Section 3.3 for a discussion of the temperature deviation.

3.2 *L. plumulosus* 10 Day Solid Phase Evaluation

Mean amphipod survival in the laboratory control sediment was 94% with a CV of 2%. Assay protocol requires that mean control survival be $\geq 90\%$. Based on this, the amphipods were considered healthy and the overlying water was determined to have had no adverse impact on the outcome of the assay. Mean amphipod survival in the CLDS reference sediment was 95% with an associated CV of 5%.

Mean amphipod survival in the site composites ranged from 87% (Composite 8) to 96% (Composite 7). The statistical analyses show that there were no negative effects on survival for amphipods exposed to any of the site composites, except for Composite 8, as compared to amphipods exposed to the CLDS reference sediment. In Composite 8 however, the difference in survival from the CLDS reference sediment was <20%.

Temperature data collected during the daily water quality observations documented a mean value of 20.6°C with a range of 19.7 to 22.2°C. Confirmation temperature data collected on an hourly basis from a data logger documented a mean value of 20.8°C with a range of 19.6 to 29.6°C. Salinity levels ranged from 18.8 to 22.3‰ with a mean value of 19.6‰. Test acceptability criteria requires a mean temperature of 20±1°C with maximum temporary fluctuations of 20±3°C, and salinity within a range of 20±2‰. See Section 3.3 for a discussion of the temperature deviation.

3.3 Protocol Deviations

Review of data collected as part of the biological evaluation documented the following deviations from either the method protocol or ESI's Standard Operating Procedures:

Protocol requires that the assays be conducted at 20±1°C for the *A. bahia* and *L. plumulosus* assays. A temperature spike occurred beginning in the overnight hours at the outset of the assay, and the hourly temperatures exceeded the protocol range for approximately 16 hours reaching a maximum of 29.6°C at 5:37 AM on Saturday morning, September 2, 2017. The technician conducting the study assessed the temperature control unit of the water bath being used and determined that the unit was set to 19.5°C, with a thermostat reading of 19°C, indicating that the unit had malfunctioned. To correct the issue, the unit was disabled and room temperature adjusted to compensate. No further temperature deviations were noted for the remainder of the assay as demonstrated by the mean temperature of 20.8°C, which falls within the protocol range. The maximum temperature recorded also falls within the acceptable range for the species. It is the opinion of ESI's technical director that this deviation had no adverse impact on the outcome of the assay.

ESI's protocol requires that the dissolved oxygen (DO) levels are maintained at or above 6 mg/L, and the assays were aerated from the start to ensure this requirement was met. However, there were sporadic DO measurements that fell below 6 mg/L in both assays (1 measurement in the *L. plumulosus* assay and 4 measurements in the *A. bahia* assay). There were no notations indicating a reason for this, however it is most likely that aeration tubes had fallen out of the test vessels and were replaced on discovery. The mean DO levels were well above the threshold, indicating that overall the desired DO levels were maintained. Furthermore, both assays met the RIM protocol of ≥40% saturation. Therefore it is the opinion of ESI's technical director that this deviation had no adverse impact on the outcome of the assay.

Upon review of final ammonia data it was determined that the unionized ammonia levels in Composites 6 and 8 of the *L. plumulosus* assay were above the protocol threshold limit of 0.8 mg/L for assay initiation, with calculated unionized ammonia values of 1.64 and 0.86 mg/L, respectively. No significant effects occurred with organisms exposed to Composite 6, which had two times the level of unionized ammonia than the threshold. Although survival for Composite 8 was statistically different from the reference, there was only an 8% difference in mean survival for Composite 8 as compared to the reference site. The unionized ammonia levels in Composite 8 had reached 0.11 mg/L by test day 3, suggesting that organism exposures above the target threshold were limited. This rapid reduction in unionized ammonia levels, coupled with the fact that no significant effect occurred in Composite 6, suggest that effects in Composite 8 do not stem from ammonia toxicity. A colorimetric test has been used to determine total ammonia values during the pre-assay monitoring phase of testing, and given that this test is reliant on analyst interpretation, it likely was unclear that total ammonia values were high enough to result in a protocol excursion (there have been no known prior excursions from this protocol). A corrective action involving confirmatory ammonia analysis has been put in place to ensure that the target ammonia levels have been achieved prior to assay initiation.

4.0 SUMMARY

This program utilized protocols developed by the US EPA and the CENAE to assess the potential impact of the proposed dredge material collected from New Haven Harbor on the marine environment. Review of the data presented in Tables 5 and 6 documents that exposure to Composites 1, 5, 6 and 8 caused significant impacts on either *A. bahia* or *L. plumulosus* survival as compared to the CLDS reference sediment, however Composite 6 was the only sediment that caused >20% difference in survival (*A. bahia* only).

Table 3. Summary of Reference Toxicant Data. 10 Day Solid Phase Evaluation. New Haven Harbor FNP. New Haven, Connecticut. September 2017.

Date	Organism Lot	Endpoint	Value	Historic Mean/ Central Tendency	Acceptable Range	Reference Toxicant
<i>Americamysis bahia</i>						
08/31/17	03AbARO083017	96Hr LC-50	20.5	18.0	13.3 - 22.8	SDS (mg/L)
<i>Leptocheirus plumulosus</i>						
09/02/17	11LpARO083117	96Hr LC-50	0.8	1.1	0.0 - 3.3	Cadmium (mg/L)

Means and Acceptable Ranges based on the most recent 20 reference toxicant assays.

Table 4. Summary of Laboratory Control Performance. 10 Day Solid Phase Evaluation. New Haven Harbor FNP. New Haven, Connecticut. September 2017.

Endpoint / Measurement		Protocol Criteria	Unit	<i>A. bahia</i>	<i>L. plumulosus</i>
Mean Survival			%	92%	94%
		Laboratory Control \geq 90%	Protocol Met	Yes	Yes
Salinity	Minimum:	<i>A. bahia</i> - 28ppt	ppt	29.0	18.8
		<i>L. plumulosus</i> - 18ppt	Protocol Met	Yes	Yes
	Maximum:	<i>A. bahia</i> - 32ppt	ppt	31.8	22.3 ^a
		<i>L. plumulosus</i> - 22ppt	Protocol Met	Yes	Yes
Temperature		Mean: 20° ± 1°C	Daily / Hourly °C	20.5 / 20.8	20.6 / 20.8
		Minimum: 17°C	Daily / Hourly °C	19.5 / 19.6	19.7 / 19.6
		Maximum: 23°C	Daily / Hourly °C	22.1 / 29.6 ^b	22.2 / 29.6 ^b
			Protocol Met	Yes / No ^b	Yes / No ^b

Notes:

^a The value meets the protocol requirement when rounded to the whole number precision reflected in the method, therefore is not considered a protocol deviation.

^b Refer to Section 3.3 for a discussion of the deviation.

APPENDIX A:
RAW DATA & STATISTICAL SUPPORT

Contents	Number of Pages
Study Number Record	1
Sample Receipt Logs and Chain of Custody Records	12
Composite Preparation Forms	9
Test Sediment Preparation Notes	1
<i>A. bahia</i> 10 Day Solid Phase Evaluation	
Pre-Assay Monitoring Record	1
Organism History Record; Organism Addition Record	2
Daily Record	1
Day 10 Recovery Bench Sheets	1
Survival Statistical Analysis Data Package	13
Sample Reading Order; Daily Water Quality Summary	7
Ammonia Calculations	1
<i>L. plumulosus</i> 10 Day Solid Phase Evaluation	
Pre-Assay Monitoring Record	1
Organism History Record; Organism Addition Record	2
Daily Record	1
Day 10 Recovery Bench Sheets	1
Survival Statistical Analysis Data Package	13
Sample Reading Order; Daily Water Quality Summary	8
Ammonia Calculations	2
Pore Water pH Record	2
Temperature Profile and Data	8
RIM QC Data Report Tables	2
Assay Review Checklists	1
Total Appendix Pages	90

STUDY NUMBER RECORD

Issue and complete this form for studies that will require multiple tasks and directly associated support studies. Issue consecutive study numbers at the start of the project to cover all potential elements of the project.

CLIENT: AECOM

CONTACT(S): Ryan McCarthy, Christine Archer, Maura Surprenant

PROJECT: New Haven Harbor Federal Navigation Project

CONTRACT #: W912WJ-17-D-0003

Species / Analysis Parameters:		STUDY:
Sample Receipt:		29516
Grain Size Analysis:		-
Composite Prep:		29517
Bulk Sediment Analysis:		29518
10 Day Assay:	<i>Leptocheirus plumulosus</i>	29519
	<i>Americamysis bahia</i>	29520
Elutriate Preparation:	Type:	29521
Elutriate Analysis:	Pentachlorophenol	Yes / No
	Trace Metals	Yes / No
	PCB Congeners	Yes / No
	Pesticides	Yes / No
SPP Assays:	<i>Menidia beryllina</i>	
	<i>Americamysis bahia</i>	29523
	<i>Arbacia punctulata</i>	
Bioaccumulation Study:	<i>Macoma nasuta</i>	29524
	<i>Nereis virens</i>	29525
Tissue Analysis:	Trace Metals	Yes / No
	PAH Compounds	Yes / No
	PCB Congeners	Yes / No
	Pesticides	Yes / No

SAMPLE RECEIPT AND CONDITION DOCUMENTATION

STUDY NO: 29516
 SDG No:
 Project: FNP: New Haven Harbor
 Delivered via: Client
 Date and Time Received: 08/18/17 1300 Date and Time Logged into Lab: NA
 Received By: JTP Logged into Lab by: KC 
 Air bill / Way bill: No Air bill included in folder if received? NA
 Cooler on ice/packs: No Custody Seals present? NA
 Cooler Blank Temp (C) at arrival: NA Custody Seals intact? NA
 Number of COC Pages: 3
 COC Serial Number(s): See CoCs
 COC Complete: Yes Does the info on the COC match the samples? No
 Sampled Date: Yes Were samples received within holding time? Yes
 Field ID complete: Yes Were all samples properly labeled? No
 Sampled Time: Yes Were proper sample containers used? Yes
 Analysis request: No Were samples received intact? (none broken or leaking) No
 COC Signed and dated: Yes Were sample volumes sufficient for requested analysis? Yes *
 Were all samples received? Yes Were VOC vials free of headspace? NA
 Client notification/authorization: Not required pH Test strip ID number: _____

Field ID	Lab ID	Mx	Analysis Requested	Bottle	Req'd Pres'n	Verified Pres'n
See Chains of Custody						

Notes and qualifications:

-Majority of samples not listed on chains of custody based on container sampling information. Samples rejected and on hold until further notice.
 * Residual samples from grain size analyses received to include in final composites
 -Field ID NHH-Q and NHH-U presented on the associated chains of custody for this sample receipt document (ESI samples -054 and -055) were accurately denoted based on sample containers, and were not present on revised chains of custody issued by AECOM on 08/21/17.

* On day samples were dropped off, chains of custody provided did not correspond to sampling information on individual sample containers. As a result, samples were rejected and stored at 4 C. AECOM staff were present at ESI on 08/21/17 and revised chains of custody to encompass all samples received. Samples were subsequently accepted and processed. One container of -049 was leaking and was exchanged into viable containers upon receipt. Compositing information was relayed by AECOM staff, as no formal compositing scheme was provided to ESI. Residual sample from grain size analyses were utilized in sample compositing, as per AECOM.

Test Sediment Preparation Notes

Study: 29519 & 29520

Client: AECOM

Project: New Haven Harbor

Field ID	Receipt Number	Notes
Composite 1	29517-001	Sieved 2mm, 1 gallon. \approx 200mL excluded. Few rocks and shells. "pudding" like. High moisture, fine. Dark gray
Composite 2	29517-002	Sieved 2mm, 1 gallon. Few small shells excluded. Very fine sediment. High moisture. Dark black / gray.
Composite 3	29517-003	Sieved 2mm, 1 gallon. \approx 50mL excluded. Few shells / rocks. Fine grain, high moisture. Gray.
Composite 4	29517-004	Sieved 2mm, 1 gallon. \approx 25mL excluded of shells. High moisture, sticky black sediment.
Composite 5	29517-005	Sieved 2mm, 1 gallon. Few shells excluded. High moisture. Black, Fine grain.
Composite 6	29517-006	Sieved 2mm, 1 gallon. Nothing excluded. Medium moisture. Black, granular sediment.
Composite 7	29517-007	Sieved 2mm, 1 gallon. Nothing excluded. Black, high moisture. Fine sediment
Composite 8	29517-008	Sieved 2mm, 1 gallon. Nothing excluded. Granular brown to black sediment. High moisture.
CLDS Ref Site	29517-009	Sieved 2mm, 1 gallon. Nothing excluded. Pudding-like, high moisture.

DATA SHEET

I. Organism History

Species Leptocleirus plumosus
Source: Lab reared X Hatchery reared _____ Field collected _____
Hatch date 8/20/17 Receipt date _____
Lot number 080017LP Strain ARO
Brood origination Chesapeake Bay, MD

II. Water Quality

Temperature 24 °C Salinity ~20 ppt D.O. 5.5 ppm
pH ~8.0 su Hardness _____ ppm Alkalinity _____ ppm

III. Culture Conditions

Freshwater _____ Saltwater X Other _____

Recirculating _____ Flow through _____ Static renewal X

DIET: Flake food X Phytoplankton _____ Trout chow X

Artemia _____ Rotifers _____ YCT _____ Other "GORG"

Prophylactic treatments: _____

Comments: 2-4mm long

IV. Shipping Information

Client: ESI # of Organisms 2500+

Carrier: FedEx Date shipped 8/31/17

Biologist: _____

Table II-1: Completeness Checklist

Quality Assurance/Quality Control Questions	Yes/No? Comments?
1. Was the report signed by the responsible applicant approved representative?	Yes
2. Were the methods for sampling, chemical and biological testing described in the Sampling and Analysis Plan (SAP) and the Laboratory QA Plan (LQAP) followed?	NA, No CENAE SAP available. Methods followed per RIM requirements and as outlined in the SAP provided by prime contractor.
3. If not, were deviations documented?	Yes
4. Was the SAP approved by the New England District?	NA
5. Did the applicant use a laboratory with a LQAP on file at the New England District?	Yes
6. Did the samples adequately represent the physical/chemical variability in the dredging area?	Yes
7. Were the correct stations sampled (include the precision of the navigation method used)?	NA, cores collected by prime contractor
8. Were the preservation and storage requirements in Chapter 8 of the EPA/Corps QA/QC Manual (EPA/USACE 1995) and EPA (2001d) followed?	Yes
9. Were the samples properly labeled?	Yes, see revised COC
10. Were all the requested data included?	Yes
11. Were the reporting limits met?	Yes
12. Were the chain-of-custody forms properly processed?	Yes, see revised COC
13. Were the method blanks run and were the concentration below the acceptance criteria?	NA
14. Was the MDL study performed on each matrix (with this data submission) or within the last 12 months?	NA
15. Were the SRM/CRM analyses within acceptance criteria?	NA
16. Were the matrix spike/matrix spike duplicates run at the required frequency and was the percent recovery/RPD within the acceptance criteria?	NA
17. Were the duplicate samples analyzed and were the RPDs within the required acceptance criteria?	NA
18. For each analytical fraction of organic compounds, were recoveries for the internal standard within the acceptance criteria?	NA
19. Were surrogate recoveries within the required acceptance criteria?	NA
20. Were corrective action forms provided for all non-conforming data?	NA
21. Were all the species-specific test conditions in Appendix V met?	Yes, except as noted for temperature, dissolved oxygen and ammonia (<i>L. plumulosus</i> only).
22. Were the test-specific age requirements met for each test species?	Yes
23. Was the bulk physical/chemical testing performed on the sediments/composites that were biologically tested?	Yes
24. Were the mortality acceptance criteria met for the water column and sediment toxicity tests?	Yes
25. Were the test performance requirements in Table 11.3 of EPA (1994a) met?	Yes, except as noted for temperature, dissolved oxygen and ammonia (<i>L. plumulosus</i> only).

Table II-8: Quality Control Summary for Biological Toxicity Testing only

Method Reference Numbers:

Quality Control (QC) Element	Acceptance Criteria*	Criteria Met? Yes/No	List results outside criteria (Cross-reference results table in data report)	Location of Results (Retained at Lab or in Data Package)
Test condition requirements for each species: Temperature, Salinity, pH, D.O., Ammonia (Total, Un-ionized)	Test conditions within the requirements specified for each species	Yes, except as noted for temperature, DO and ammonia.	Temperature spike above acceptable range on Day 0-1, and sporadic DO measurements <6 mg/L (both species). Unionized ammonia levels >0.8 mg/L in Composites 6 and 8 at assay initiation (<i>L. plumulosus</i> only).	Section 3.1, 3.2 and 3.3, and Appendix A
Test species age	Age/health within guidelines for each species (Appendix V)	Yes		Appendix A
Bulk physical/chemical analyses (If required by the Sampling plan)	Required? If so, performed? Yes or No	Yes		Data Package (separate cover)
Water column toxicity test: Control mortality Control abnormality	$\leq 10\%$ mean $\leq 30\%$ mussel/oyster; $\leq 40\%$ clam larvae, $\leq 30\%$ sea urchin larvae	NA		
Sediment toxicity test: Control mortality Compliance with applicable test acceptability requirements in Table 11.3 (EPA 1994a)	$\leq 10\%$ mean (no chamber > 20%) See EPA (1994a) Section 9; Table 11.3	Yes		Appendix A

* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

LABORATORY STANDARDS STATEMENT

This study was performed by EnviroSystems, Incorporated at its facility in Hampton, New Hampshire. EnviroSystems' laboratory is accredited by the State of New Hampshire under the National Environmental Laboratory Accreditation (NELAC) program. Additionally, ESI is accredited under the Department of Defense (DoD) ELAP program, ISO/IEC 17025:2005, Certificate Number L2340. ESI also has an approved Laboratory Quality Assurance Plan (LQAP) covering all portions of this project. All testing conducted by EnviroSystems as part of this program was compliant with NELAC guidelines and standards. Additionally, this study was conducted in accordance with guidelines presented in the 2004 version of the New England District's Regional Implementation Manual (RIM) for Evaluation of Dredged Material Proposed for Disposal In New England Waters. Any deviations from specific elements of the RIM are detailed in the Protocol Deviation Section of this Report.

TOXICOLOGICAL EVALUATION OF A PROPOSED DREDGE SEDIMENT:

New Haven Harbor Federal Navigation Project
Tier III Sediment Evaluation
New Haven, Connecticut

New England District Corps of Engineers
Contract No. W912WJ-17-D-0003
TO#1 Project Number 60543021

28 Day Sediment Toxicity and Bioaccumulation Evaluation

1.0 INTRODUCTION

As part of a comprehensive plan to reduce adverse environmental impacts of ocean dumping, Section 103 of the Marine Protection, Research and Sanctuaries Act of 1972, specifies that all sediments to be discharged into ocean waters must be evaluated to define their potential impact on existing benthic communities. The United States Environmental Protection Agency (US EPA) has determined that the most effective means to make such an assessment is through the use of bioassay tests which provide a relatively direct estimate of potential impact.

This project was designed to evaluate the potential toxicity of sediments from the area of dredging proposed for the New Haven Harbor Navigation Improvement Project located in New Haven, Connecticut. Testing involved conduct of 28-day bioaccumulation evaluations using *Nereis virens* (polychaete worm) and *Macoma nasuta* (bivalve clam). Testing followed procedures established by the US EPA, US Army Corps of Engineers and the New England District Army Corps of Engineers (CENAE) for testing of dredged material. Procedures are presented in *Evaluation of Dredged Material Proposed for Ocean Disposal* (US EPA, US ACE 1991), *Evaluation of Dredged Material Proposed for Discharge in Waters of the U.S. - Testing Manual* (US EPA, US ACE 1998), and the *Regional Implementation Manual for Evaluation of Dredged Material Proposed for Disposal in New England Waters* (US EPA, CENAE, 2004), (RIM document).

2.0 METHODS AND MATERIALS

2.1 Sample Collection, Preservation and Storage

Sediment cores for toxicological analysis were collected by AECOM, Chelmsford, Massachusetts using vibracoring equipment from locations identified in the dredge footprint specified in the project Sampling and Analysis Plan (AECOM, 2017). Sediment samples were received under chain of custody in 5 gallon polyethylene buckets, and were composited based on the compositing scheme provided by AECOM's team. Reference site samples were also collected by AECOM from the Central Long Island Sound Disposal Site (CLDS). Upon arrival at the laboratory, all samples received an internal sample control number and were logged into the project sample control system. Prior to testing, samples were placed in a secure refrigerator and stored at a temperature of $4\pm2^{\circ}\text{C}$ until test initiation. Sample identification, collection and receipt information is summarized in Table 1. Sample compositing information is provided in Table 2.

Sediment for the laboratory control treatment was collected from the Hampton Estuary, Hampton, New Hampshire. The area is not known to receive any direct industrial inputs and has been used as a laboratory reference sediment in the testing of marine sediments for more than 25 years. Overlying seawater was obtained from the Hampton Estuary. Water from the estuary has been used for the culture and maintenance of test organisms at ESI since 1978. Seawater is obtained through a filter system located on the bottom of the estuary at a point approximately 1 mile from the open ocean.

2.2 Test Organisms

M. nasuta, 15-40 mm in total length, were obtained from Aquatic Research Organisms (ARO), Hampton, New Hampshire. Organisms were field collected along the Washington coast and shipped to ARO via overnight delivery. At ESI, the clams were placed in clean holding sediment with flowing seawater and monitored for at least 24 hours prior to use. Damaged bivalves and those that would not close when prodded were discarded.

Adult *N. virens* were also obtained from ARO. Worms were collected in the field from the Damariscotta River in Boothbay Harbor, Maine and delivered to ARO. At ESI, the worms were placed in clean holding sediment with flowing seawater and monitored for at least 24 hours prior to use. Damaged and inactive worms were not used in the assay.

2.3 Bioaccumulation Evaluation

The assay was started by placing a 5-7 cm layer of sediment (control, reference or site sediment) into 10 gallon aquaria designed for flow-through testing. Overlying water was then added to each aquarium. The volume of the overlying water in these chambers was approximately 6 gallons. Water flow was adjusted to provide approximately 6 volume additions of water/day to each aquarium. Flow into each aquarium was set so that incoming water mixed throughout the tank and did not stratify as a surface layer.

M. nasuta and *N. virens* were indiscriminately selected from the pool of organisms and randomly added to the aquaria. A total of 20 worms and 30 clams were added to each of 5 replicates; species were tested in separate test chambers. Temperature was maintained at 12-16°C with no readings exceeding $\pm 3^\circ\text{C}$. Salinity was maintained at $30\pm 2\%$. The photoperiod was set at 16:8 hours light:dark. Dissolved oxygen, pH, temperature, specific conductance and salinity were measured daily in all tanks. Dissolved oxygen levels were maintained at a minimum level of $\geq 60\%$ saturation by providing aeration to all tanks from the start of the assay. Organisms were not fed during the exposure period.

After 28 days exposure, *M. nasuta* and *N. virens* were recovered from the test sediments and counted. Survival counts were used for statistical analysis. All living organisms were transferred to clean test vessels and maintained in clean seawater for 24 hours to allow for removal of sediment from the animals' digestive tract. After the depuration period, organisms were transferred to plastic bags and frozen for subsequent delivery to Alpha Analytical, Mansfield, Massachusetts for tissue analysis.

2.4 Tissue Analysis

Methods used by Alpha Analytical in the analyses of tissues generated from the bioaccumulation tests followed protocols recommended in Table 8 of the New England District RIM document with appropriate updates related to current methods. Trace metals were evaluated using EPA Method 6020A, Inductively Coupled Plasma - Mass Spectrometry (ICP-MS), and mercury was evaluated using EPA Method 7474. Organic compounds were evaluated as follows: PCB Congeners and PAH compounds by SW 846 8270D-SIM/EPA 680(M) and pesticides by SW 846 8081B. The complete analytical chemistry and quality assurance data package was provided under separate cover and in appropriate Electronic Data Deliverable (EDD) files by Alpha Analytical.

2.5 Data Analysis

Tissue chemistry data were provided by Alpha Analytical. The statistical analyses of survival and body burden data were completed at ESI using CETIS™ ver. 1.9.3.0 (Comprehensive Environmental Toxicity Information System) software to determine significant differences between the reference sediment and each site composite sample. Data were evaluated to determine homogeneity of sample variances and normality of distribution using appropriate statistics. Data sets were subsequently evaluated using the appropriate parametric or non-parametric Analysis of Variance (ANOVA) statistic. Statistical difference was evaluated at $\alpha = 0.05$. Per RIM guidelines, the MDL is used in instances when a compound of concern is not detected for purposes of calculating a mean concentration. MDLs used in statistical computations are adjusted for differences in tissue mass and final extract volumes used in the analysis for each sample.

Following CENAE protocol, the statistical analyses were completed for all compounds of concern (COCs) identified in the SAP and are included in Appendix A, however the findings of significance presented in the report focus only on those COCs detected in the reference sample.

2.6 Reference Toxicant Evaluation

As part of the laboratory quality control program, standard reference toxicant assays are conducted on a regular basis for each test species. These results provide relative health and response data while

allowing for comparison with historic data sets. Summaries of acute exposure reference toxicant assays conducted in support of this study are provided in Table 3.

3.0 RESULTS

Table 4 provides a summary of laboratory control performance and test acceptability criteria. Tables 5 and 6 provide a summary of *M. nasuta* and *N. virens* survival data and statistical analyses. Tables 7 and 8 provide summaries of body burden data and findings of significance for *M. nasuta* and *N. virens*, respectively. Laboratory bench sheets, detailed summaries of survival, body burden data and associated support data are included in Appendix A.

3.1 *Macoma nasuta*

3.1.1 Survival

Mean *M. nasuta* survival in the laboratory control sediment was 97% with a coefficient of variation (CV) of 2%. Mean survival in the CLDS reference sediment was 99% with a CV of 2%. Surviving organisms from the control and reference site provided sufficient tissue for preparation and analysis of body burdens. The endpoints met and/or exceeded requirements specified in the current version of the RIM.

After 28 days exposure, mean survival of the bivalves in the site composite sediments ranged from 96 to 99%. The statistical evaluation of the data showed no significant reduction in survival for bivalves maintained in the site composites when compared to the CLDS reference sediment, with the exception of Composite 8, however the difference in survival was <10% as compared with the CLDS reference sediment.

3.1.2 Water Quality Summary

Daily water quality data collected during the assay documented a mean temperature of 12.5°C with a range of 11.9 to 12.8°C. Confirmation temperature data collected on an hourly basis documented a mean temperature of 12.7°C with a range of 12.2 to 14.1°C. Additional daily water quality data documented salinity levels during the assay varied from 28.1 to 30.4‰ with a mean value of 29.5‰. Dissolved oxygen levels ranged from 61% to 119% with a mean level of 99% while pH ranged from 7.62 to 7.97 SU. Review of temperature and salinity data documented that all values fell within limits specified by the RIM and ESI's protocol.

3.1.3 Body Burden Analysis

Based on CENAE criteria, there were significant increases in body burdens for clams reared in site composites as compared to reference tissue for the following COCs: cadmium, chromium, copper, lead, 5 PAHs (benzo[a]anthracene, benzo[b]fluoranthene, fluoranthene, phenanthrene and pyrene) and DDE. Nickel, zinc, and endrin were the only COCs detected in reference tissue that did not demonstrate significant uptake in site composite tissue. Tissue from composites 4, 5, 6, 7 and 8 consistently demonstrated significant increases in body burden. There was also significant uptake of pyrene from composite 2.

Review of body burden data showed that the following COCs were also detected in site composite tissues, but no further analysis was required because the COC was not detected in reference tissue: 4 PAHs (benzo[a]pyrene, benzo[k]fluoranthene, chrysene, and indeno[1,2,3-cd]pyrene), 9 PCB congeners (8, 44, 52, 66, 101, 105, 118, 138 and 153) and 6 pesticides (cis-chlordane, trans-nonachlor, DDT, DDD, dieldrin and beta-Endosulfan). These COCs were primarily present at high concentrations in composites 4, 5, 6, 7 and 8.

3.2 *Nereis virens*

3.2.1 Survival

Mean *N. virens* survival in the laboratory control sediment was 92% with a coefficient of variation (CV) of 5%. Mean survival in the CLDS reference sediment was 97% with a CV of 3%. Surviving organisms from the control and reference site provided sufficient tissue for preparation and analysis of body burdens. The endpoints met and/or exceeded requirements specified in the current version of the RIM.

After 28 days exposure, mean survival of the polychaetes in the site composite sediments ranged from 93 to 98%. The statistical evaluation of the data showed no significant reduction in survival for polychaetes maintained in the site composites when compared to the CLDS reference sediment, with the exception of Composite 6 however the difference in survival was <10% as compared with the CLDS reference sediment.

3.2.2 Water Quality Summary

Daily water quality data collected during the assay documented a mean temperature of 12.4°C with a range of 11.8 to 12.6°C. Confirmation temperature data collected on an hourly basis are based on those collected for *M. nasuta*, which documented a mean temperature of 12.7°C with a range of 12.2 to 14.1°C. Please see a discussion of the hourly temperature data for *N. virens* in Section 3.3, Protocol Deviations. Additional daily water quality data documented salinity levels during the assay varied from 28.4 to 30.3‰ with a mean value of 29.5‰. Dissolved oxygen levels ranged from 61% to 102% with a mean level of 96% while pH ranged from 7.53 to 8.04 SU. Review of temperature and salinity data documented that all values fell within limits specified by the RIM and ESI's protocol.

3.2.3 Body Burden Analysis

Based on CENAE criteria, there were significant increases in body burdens for worms maintained in site composites as compared to reference site tissue for the following COCs: copper, zinc, 4 PAHs (acenaphthene, acenaphthylene, naphthalene and phenanthrene) and 2 PCB congeners (138 and 153). It should be noted that nearly all PAHs and PCBs reflect higher mean tissue concentrations in the site composites as compared with the reference composites, and the majority of the mean COC concentrations are at or near the MDL suggesting interferences with the tissue matrix, rather than actual detection of these COCs in worm tissue. This is true for zinc and 2 of the PAHs (acenaphthene and naphthalene) all were found to be significantly higher in site composite tissue as compared with reference tissue. The same is true for phenanthrene, which was detected at or near the MDL in all composites except composite 1 where the compound was detected above the reporting limit. In this instance, however, the only hit above the reporting limit (in replicate A) was identified as an outlier. Tissue from composite 4 demonstrated significant uptake of copper, and composites 6, 7 and 8 demonstrated significant increases in body burden for the PCB congeners 138 and 153. The other incidences of significant uptake of COCs from composites 2, 3, 4, 5, 6, 7 and 8 appeared to be at or near the MDL.

Review of body burden data showed that the following COCs were also detected in site composite tissues, but no further analysis was required because the COC was not detected in reference tissue: 4 PAHs (anthracene, fluoranthene, fluorene and pyrene) and 4 PCB congeners (52, 101, 180 and 187). Most of these COCs were primarily present at high concentrations in composites 4, 5, 6, 7 and 8, although many of these COCs were present at low concentrations (at or slightly above the MDL) in composite 1.

3.3 Protocol Deviations

Review of the assay data revealed only one deviation from the method and/or ESI's protocol. The hourly temperature logger was activated on Day 0 (August 29, 2017) of the *M. nasuta* assay, 2 days earlier than the *N. virens* test was initiated. Due to an oversight, the temperature logger was removed from the temperature controlled room at the end of the *M. nasuta* assay on September 26, 2017, 2 days prior to the end of the *N. virens* assay, therefore 2 days worth of hourly temperatures were not measured. There were no abnormalities observed in the daily water quality measurements that were collected during this period. This represents a deviation from ESI's SOP and a data gap, however it is the opinion of ESI's study director that this deviation did not adversely affect the outcome of the assay.

3.4 Summary

This program utilized protocols developed by the US EPA and the CENAE to assess the potential impact of the proposed dredge material collected from New Haven Harbor on the marine environment. Results of the 28-day toxicity evaluation indicate that long term exposure to Composites 8 and 6 sediment negatively impacted the survival of *M. nasuta* (clam) and *N. virens* (polychaete worm), respectively, when compared against the CLDS reference sediment, however the difference in survival was <10% in both cases.

Results of body burden data generated from recovered *M. nasuta* and *N. virens* tissue consistently showed significant uptake of COCs from composites 4, 5, 6, 7 and 8. Other COCs were also present in these composites at elevated concentrations. There were also sporadic incidences of significant uptake of COCs from composites 2 and 3, however these appeared to be at or near the MDL except in a few instances (e.g., fluorene and pyrene uptake in the clam from composite 2).

Table 3. Summary of Reference Toxicant Data. Sediment Bioaccumulation Evaluation. New Haven Harbor FNP. New Haven, Connecticut. August 2017.

Date	Endpoint		Value	Historic Mean	Acceptable Range	Reference Toxicant
<i>Macoma nasuta</i>						
08/29/17	Survival	LC-50	9.2	9.0	1.1 - 16.8	Copper (mg/L)
<i>Nereis virens</i>						
08/31/17	Survival	LC-50	3.2	3.6	1.3 - 5.8	Copper (mg/L)

Note: Means and Acceptable Ranges based on the past 20 reference toxicant assays.
Acceptable range is defined as ± 2 standard deviations of historic mean.

Table 4. Summary of Laboratory Control Performance and Assay Acceptability Criteria. Sediment Bioaccumulation Evaluation. New Haven Harbor FNP. New Haven, Connecticut. August 2017.

Endpoint / Measurement		Protocol Criteria	Unit	<i>M. nasuta</i>	<i>N. virens</i>
Mean Survival		laboratory Control ≥ 90%	%	97%	92%
			Protocol Met	Yes	Yes
Tissue Mass		Sufficient for analysis	Protocol Met	Yes	Yes
Salinity	Minimum:	28‰	ppt	28.1	28.4
			Protocol Met	Yes	Yes
	Maximum:	32‰	ppt	30.4	30.3
			Protocol Met	Yes	Yes
Temperature		Mean: 12-16°C	Daily / Hourly	12.5 / 12.7	12.4 / 12.7 ^a
		Minimum: 9°C	Daily / Hourly	11.9 / 12.2	11.8 / 12.2 ^a
		Maximum: 15°C	Daily / Hourly	12.8 / 14.1	12.6 / 14.1 ^a
			Protocol Met	Yes / Yes	Yes / Yes

Notes:

^a The *M. nasuta* and *N. virens* assays did not run concurrently, the *M. nasuta* assay started and ended 2 days earlier than the *N. virens* assay. However, the shared hourly temperature logger was removed from the temperature-controlled room at the end of the *M. nasuta* assay, two days before the end of the *N. virens* assay, therefore these measurements were not collected. The values reported for *N. virens* are the same as for *M. nasuta*. See Section 3.3 for a discussion of the protocol deviation.

Notes:

a = Analyte not detected (below MDL) in at least one replicate; mean value was calculated using the project specific MDL for non-detected values.

b = Analyte estimated (detected below RL but above MDL) in at least one replicate; mean value calculated using estimated value.

c = Analyte was detected in the treatment tissue sample replicates at an equal or higher mean concentration than in the associated reference site tissue, however statistical analysis is not required as the analyte was not detected in any of the reference site replicates.

NS = Not Significant - mean tissue body burden was not statistically different from the associated reference site mean body burden. Statistical significance accepted at $\alpha=0.05$.

S = Significant - mean tissue body burden was statistically different, greater than the associated reference site mean body burden. Statistical significance accepted at $\alpha=0.05$

NS/S indicates that a statistical outlier was detected and the findings of significance were different with and without the statistical outlier included in the analysis.

Table 8. Statistical Comparisons of *Nereis virens* Body Burdens vs. CLDS Reference Site. Sediment Bioaccumulation Evaluation. New Haven Harbor FNP. New Haven, Connecticut. August 2017.

Notes:

a = Analyte not detected (below MDL) in at least one replicate; mean value was calculated using the project specific MDL for non-detected values.

b = Analyte estimated (detected below RL but above MDL) in at least one replicate; mean value calculated using estimated value.

c = Analyte was detected in the treatment tissue sample replicates at an equal or higher mean concentration than in the associated reference site tissue, however statistical analysis is not required as the analyte was not detected in any of the reference site replicates.

NS = Not Significant - mean tissue body burden was not statistically different from the associated reference site mean body burden. Statistical significance accepted at $\alpha=0.05$.

S = Significant - mean tissue body burden was statistically different, greater than the associated reference site mean body burden. Statistical significance accepted at $\alpha=0.05$

NS/S indicates that a statistical outlier was detected and the findings of significance were different with and without the statistical outlier included in the analysis.

STUDY NUMBER RECORD

Issue and complete this form for studies that will require multiple tasks and directly associated support studies. Issue consecutive study numbers at the start of the project to cover all potential elements of the project.

CLIENT: AECOM

CONTACT(S): Ryan McCarthy, Christine Archer, Maura Surprenant

PROJECT: New Haven Harbor Federal Navigation Project

CONTRACT #: W912WJ-17-D-0003

Species / Analysis Parameters:		STUDY:
Sample Receipt:		29516
Grain Size Analysis:		-
Composite Prep:		29517
Bulk Sediment Analysis ^a:		29518
10 Day Assay:	<i>Leptocheirus plumulosus</i>	29519
	<i>Americamysis bahia</i>	29520
Elutriate Preparation:	Type:	29521
Elutriate Analysis:	Pentachlorophenol	Yes / No
	Trace Metals	Yes / No
	PCB Congeners	Yes / No
	Pesticides	Yes / No
SPP Assays:	<i>Menidia beryllina</i>	
	<i>Americamysis bahia</i>	29523
	<i>Arbacia punctulata</i>	
Bioaccumulation Study:	<i>Macoma nasuta</i>	29524
	<i>Nereis virens</i>	29525
Tissue Analysis ^a:	Trace Metals	Yes / No
	PAH Compounds	Yes / No
	PCB Congeners	Yes / No
	Pesticides	Yes / No

Notes:

^a Bulk sediment and tissue analyses were completed by Alpha Analytical, Mansfield, Massachusetts.

From AECOM's Sampling and Analysis Plan (August, 2017)

Client/Project Name:
USACE - NHH - FNP

Project Number:

Project Location:
New Haven Harbor

Field Logbook No.:

Analysis Requested

Container Type
P - Plastic
A - Amber Glass
G - Clear Glass
V - VOA Vial
O - Other
E - Encore

Preservation
1 - HCl, 4°
2 - H2SO4, 4°
3 - HNO3, 4°
4 - NaOH, 4°
5 - NaOH/ZnAc, 4°
6 - Na2S2O3, 4°
7 - 4°

Sampler (Print Name)/(Affiliation):

STUDY NO: 29516
 SDG No:
 Project: FNP: New Haven Harbor
 Delivered via: Client
 Date and Time Received: 08/18/17 1300 Date and Time Logged into Lab: NA
 Received By: JTP Logged into Lab by: KC 
 Air bill / Way bill: No Air bill included in folder if received? NA
 Cooler on ice/packs: No Custody Seals present? NA
 Cooler Blank Temp (C) at arrival: NA Custody Seals intact? NA
 Number of COC Pages: 3
 COC Serial Number(s): See CoCs
 COC Complete: Yes Does the info on the COC match the samples? No
 Sampled Date: Yes Were samples received within holding time? Yes
 Field ID complete: Yes Were all samples properly labeled? No
 Sampled Time: Yes Were proper sample containers used? Yes
 Analysis request: No Were samples received intact? (none broken or leaking) No
 COC Signed and dated: Yes Were sample volumes sufficient for requested analysis? Yes *
 Were all samples received? Yes Were VOC vials free of headspace? NA
 Client notification/authorization: Not required pH Test strip ID number: _____

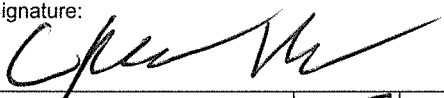

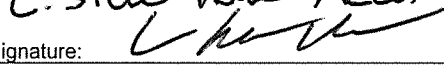

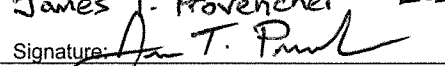

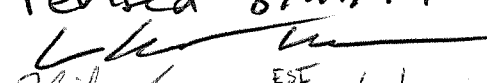

Field ID	Lab ID	Mx	Analysis Requested	Bottle	Req'd Pres'n	Verified Pres'n
See Chains of Custody						

Notes and qualifications:

-Majority of samples not listed on chains of custody based on container sampling information. Samples rejected and on hold until further notice.
 * Residual samples from grain size analyses received to include in final composites
 -Field ID NHH-Q and NHH-U presented on the associated chains of custody for this sample receipt document (ESI samples -054 and -055) were accurately denoted based on sample containers, and were not present on revised chains of custody issued by AECOM on 08/21/17.

* On day samples were dropped off, chains of custody provided did not correspond to sampling information on individual sample containers. As a result, samples were rejected and stored at 4 C. AECOM staff were present at ESI on 08/21/17 and revised chains of custody to encompass all samples received. Samples were subsequently accepted and processed. One container of -049 was leaking and was exchanged into viable containers upon receipt. Compositing information was relayed by AECOM staff, as no formal compositing scheme was provided to ESI. Residual sample from grain size analyses were utilized in sample compositing, as per AECOM.

Laboratory Composite Preparation Documentation

Project Number: 29516
 Project Name: New Haven Harbor
 Composite Identifier: Composite 1
 Composite Lab ID.: 29517-001 Composite Final Volume: 22 gallons
 Composite Matrix: Solid Composite Container(s): 5x5 gallon buckets
 Composite Prepared Date: 08/21/17 1x1 gallon bucket
 Composite Prepared Time: 0840
 Initials: BG/JTP
 Protocol: ESI SOP 1478

This composite was prepared according to protocols cited using the samples and amounts listed below:

Field ID	ESI Lab ID	Matrix	Liquids Excluded	Solids Excluded	Amount Added	Notes
NHH-C	29516-027	Solid	—	≈ 2.5 gal/bag	≈ 24.5 gal/bag	gray to black sediment with lots of shell hash
↓	↓ -028	↓	↓	↓	↓	

Subsamples Removed:

Lab Number	Sample Use
29519	10-Day Solid Phase <i>L. plumulosus</i>
29520	10-Day Solid Phase <i>A. bahia</i>
29521	Elutriate Preparation
29524	28-Day Bio-accumulation <i>M. nasuta</i>
29525	28-Day Bio-accumulation <i>N. virens</i>

Laboratory Composite Preparation Documentation

Project Number: 29516
 Project Name: New Haven Harbor
 Composite Identifier: Composite 2
 Composite Lab ID.: 29517-002 Composite Final Volume: ≈ 28^{gallons} ^{ESD 08/11}
 Composite Matrix: Solid Composite Container(s): 5x5 gallon buckets
 Composite Prepared Date: 08/11/17 1x1 gallon bucket
 Composite Prepared Time: 0950
 Initials: RF JTP
 Protocol: ESI SOP 1478

This composite was prepared according to protocols cited using the samples and amounts listed below:

Field ID	ESI Lab ID	Matrix	Liquids Excluded	Solids Excluded	Amount Added	Notes
NHH-D	29516-029 030	Solid	—	—	≈ 10 gallons	
NHH-E	↓ - 033 034	Solid	—	≈ 7 ^{gallons} ^{ESD 08/11}	≈ 7 gallons	
NHH-F	↓ - 009 010	Solid	—	—	≈ 10 gallons	

Subsamples Removed:

Lab Number	Sample Use
29519	10-Day Solid Phase <i>L. plumulosus</i>
29520	10-Day Solid Phase <i>A. bahia</i>
29521	Elutriate Preparation
29524	28-Day Bio-accumulation <i>M. nasuta</i>
29525	28-Day Bio-accumulation <i>N. virens</i>

Laboratory Composite Preparation Documentation

Project Number: 29516
 Project Name: New Haven Harbor
 Composite Identifier: Composite 3
 Composite Lab ID.: 29517-003 Composite Final Volume: 31 gal
 Composite Matrix: Solid Composite Container(s): 6x5 gallon buckets
 Composite Prepared Date: 08/21/17 1x1 gallon buckets
 Composite Prepared Time: 1400
 Initials: W/ JTP
 Protocol: ESI SOP 1478

This composite was prepared according to protocols cited using the samples and amounts listed below:

Laboratory Composite Preparation Documentation

Project Number: 29516
 Project Name: New Haven Harbor
 Composite Identifier: Composite 5
 Composite Lab ID.: 29517-005 Composite Final Volume: ≈ 29 gallons
 Composite Matrix: Solid Composite Container(s): 6 x 5 gallon
 Composite Prepared Date: 08/21/17 1 x 1 gallon
 Composite Prepared Time: 1530
 Initials: JTP
 Protocol: ESI SOP 1478

This composite was prepared according to protocols cited using the samples and amounts listed below:

Field ID	ESI Lab ID	Matrix	Liquids Excluded	Solids Excluded	Amount Added	Notes
NHH-M	29516-011	Solid	—	—	≈ 9.5g	
NHH-N	↓ -024 -025	Solid	—	—	≈ 9g	
NHH-O	↓ -016 -017	Solid	—	—	≈ 10.5g	

Subsamples Removed:

Aquatic Research Organisms

DATA SHEET/ CUSTODY CHAIN 99NvAR0083117

I. Organism History

Species Neanthes (Neries) virens

Source: Lab reared _____ Hatchery reared _____ Field collected X

Hatch date Mixed aged adults Receipt date 8-31-17

Lot number _____ Strain Wild

Brood origination: Damariscotta River, Boothbay Harbor, Maine

II. Water Quality

Temperature 4 °C Salinity 28-32 ppt D.O. Saturated ppm

pH 8.0-8.4 su Hardness N.A. ppm Alkalinity N.A. ppm

III. Culture Conditions

Freshwater _____ Saltwater X Other _____

Recirculating _____ Flow through _____ Static _____

DIET: Flake food _____ Phytoplankton _____ Trout chow _____

Artemia _____ Rotifers _____ YCT _____ Other Not fed

Prophylactic treatments: _____

Comments: Held at 4C on moist seaweed. Shipped with gel ice packs to keep cool

IV. Shipping Information

Client: EST # of Organisms 1500

Carrier: _____ Date shipped 8-31-17

Tracking # _____ # of boxes _____

Released by: Mark Rosenberg Date: 8-31-17 Time: 9:15AM

Received by: _____ Date: _____ Time: _____

STUDY: 29525
CLIENT: AECOM
PROJECT: New Haven Harbor FNP
ASSAY: 28-Day Survival and Bioaccumulation Evaluation
TASK: Daily Water Qualities
Species: *Nereis virens*
