APPROVED JURISDICTIONAL DETERMINATION FORM U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

<u>SECTION I: BACKGROUND INFORMATION</u> A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): January 14, 2016

Β. DISTRICT OFFICE, FILE NAME, AND NUMBER: NAE-2015-2205 Harmony Sea Farm LLC PM: Rose

Ω PROJECT LOCATION AND BACKGROUND INFORMATION:

Center coordinates of site (lat/long in degree decimal format): Lat. 41.3396° N, Long. -71.88249° Universal Transverse Mercator: Name of nearest waterbody. Long. Lat. 41.3396° N, Long. -71.88249° T.

Name of nearest waterbody: <mark>Long Island Sound</mark> Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: <mark>Long Island Sound</mark> Name of watershed or Hydrologic Unit Code (HUC): 02030203

Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.

 $|\square$

different JD form Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on è

Ð. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY): Office (Desk) Determination. Date: December 16, 2015 Field Determination. Date(s):

SECTION II: SUMMARY OF FINDINGS A. RHA SECTION 10 DETERMINATION OF JURISDICTION

area. There Are "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review Required

Waters subject to the ebb and flow of the tide

 \boxtimes

Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce Explain: Interstate Tidal Estuary with abundant commercial and industrial navigation

в. **CWA SECTION 404 DETERMINATION OF JURISDICTION**

There Are "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [Required]

.-Waters of the U.S.

ε

- Indicate presence of waters of U.S. in review area (check all that apply): ¹
- Wetlands adjacent to TNWs TNWs, including territorial seas
- Relatively permanent waters² (RPWs) that flow directly or indirectly into TNWs
- Non-RPWs that flow directly or indirectly into TNWs
- Wetlands directly abutting RPWs that flow directly or indirectly into TNWs Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- Impoundments of jurisdictional waters
- Isolated (interstate or intrastate) waters, including isolated wetlands

- Ŀ. Identify (estimate) size of waters of the U.S. in the review area: Non-wetland waters: linear feet: width (ft) and/or <mark>20</mark> acres
- Wetlands: acres.
- °. Limits (boundaries) of jurisdiction based on: Established by mean (average) high waters. Elevation of established OHWM (if known):
- 2
- Non-regulated waters/wetlands (check if applicable):³
 Potentially jurisdictional waters and/or wetlands wer Explain: Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional.

 ¹ Boxes checked below shall be supported by completing the appropriate sections in Section III below.
 ² For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).
 ³ Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

₽ **TNWS AND WETLANDS ADJACENT TO TNWS**

Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below. The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete

1. TNW Identify TNW: Long Island Sound, Wequetequock Cove

Summarize rationale supporting determination: Interstate tidal estuary

2 Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent":

в. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

determine whether or not the standards for jurisdiction established under Rapanos have been met. This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps

skip to Section III.D.4. months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow

relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and though a significant nexus finding is not required as a matter of law. EPA regions will include in the record any available information that documents the existence of a significant nexus between a

analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite If the waterbody⁴ is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

- : Characteristics of non-TNWs that flow directly or indirectly into TNW
- Ξ Average annual snowfall: Drainage area: Watershed size: **General Area Conditions** Average annual rainfall: **Pick List** Pick List inches inches
- E Physical Characteristics:

æ

Relationship with TNW: Tributary flows directly into TNW Tributary flows through Pick List tributaries before entering TNW.

Project waters cross or serve as state boundaries. Explain: Project waters are Project waters are Project waters are Project waters are Pick List aerial (straight) miles from RPW Pick List river miles from RPW Pick List river miles from TNW. Pick List aerial (straight) miles from TNW

Tributary stream order, if known: Identify flow route to TNW⁵:

West. ⁴ Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid

⁵ Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW

ural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the stream temporarily flows underground to the waterbody's flow.
 (iii) Chemical Characteristics: Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.). Explain: Identify specific pollutants, if known:
If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply): High Tide Line indicated by: Oil or scum line along shore objects fine shell or debris deposits (foreshore) physical markings/characteristics physical markings/characteristics other (list):
Tributary has (check all that apply): Bed and banks OHWM ⁶ (check all indicators that apply): clear, natural line impressed on the bank changes in the character of soil shelving vegetation matted down, bent, or absent leaf litter disturbed or washed away sediment deposition water staining other (list): Discontinuous OHWM. ⁷ Explain:
Subsurface flow: Pick List . Explain findings:
Surface flow is: Pick List. Characteristics:

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: Presence of run/riffle/pool complexes. Explain: Tributary geometry: Pick List Tributary gradient (approximate average slope):%
Primary tributary substrate composition (check all that apply):
Tributary properties with respect to top of bank (estimate): Average width: feet Average depth: feet Average side slopes: Pick List.
 (b) <u>General Tributary Characteristics (check all that apply):</u> Tributary is:

⁶A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break. ⁷Ibid.

	 (iv) Biological Characteristics. Channel supports (check all that apply): Riparian corridor. Characteristics (type, average width): Wetland fringe. Characteristics (type, average width): Habitat for: Federally Listed species. Explain findings: Fish/spawn areas. Explain findings: Fish/spawn areas. Explain findings: Other environmentally-sensitive species. Explain findings: Aquatic/wildlife diversity. Explain findings: Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW (i) Physical Characteristics: Properties: Wetland circe. Active areas
-	 (i) Physical Characteristics: (a) <u>General Wetland Characteristics:</u> Properties: Wetland size: acres Wetland type. Explain: . Wetland quality. Explain: . Project wetlands cross or serve as state boundaries. Explain: .
	(b) <u>General Flow Relationship with Non-TNW</u> : Flow is: Pick List . Explain:
	Surface flow is: Pick List Characteristics:
	Subsurface flow: Pick List . Explain findings: Dye (or other) test performed:
	 (c) Wetland Adjacency Determination with Non-TNW: Directly abutting Not directly abutting Discrete wetland hydrologic connection. Explain: Ecological connection. Explain: Separated by berm/barrier. Explain:
	 (d) Proximity (Relationship) to TNW Project wetlands are Pick List river miles from TNW. Project waters are Pick List aerial (straight) miles from TNW. Flow is from: Pick List. Estimate approximate location of wetland as within the Pick List floodplain.
-	 (ii) Chemical Characteristics: Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershec characteristics; etc.). Explain: Identify specific pollutants, if known:
	 (iii) Biological Characteristics. Wetland supports (check all that apply): Riparian buffer. Characteristics (type, average width): Vegetation type/percent cover. Explain: Habitat for: Federally Listed species. Explain findings: Fish/spawn areas. Explain findings: Other environmentally-sensitive species. Explain findings: Aquatic/wildlife diversity. Explain findings:
. 3	Characteristics of all wetlands adjacent to the tributary (if any) All wetland(c) being considered in the cumulative analysic: Pick I ist

All wetland(s) being considered in the cumulative analysis: **Pick List** Approximately () acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Summarize overall biological, chemical and physical functions being performed:

Ω SIGNIFICANT NEXUS DETERMINATION

of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent outside of a floodplain is not solely determinative of significant nexus. of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed

discussed in the Instructional Guidebook. Factors to consider include, for example: Draw connections between the features documented and the effects on the TNW, as identified in the Rapanos Guidance and

- TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW? Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to
- other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW? Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and

٠

.

- support downstream foodwebs? Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

below: Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented

- : Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D:
- 2 Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into adjacent wetlands, then go to Section III.D: TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its
- $\dot{\omega}$ presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

- : TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area: Wetlands adjacent to TNWs: TNWs: linear feet width (ft), Or, acres. acres
- 2
- **RPWs that flow directly or indirectly into TNWs.** Tributaries of TNWs where tributaries typically Tributaries of TNWs where ributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial:
- Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

ote # 3. lete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook. asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for asistent with the process described in the Corps/EPA Memorandum Regarding CWA Act Jurisdiction Following Rapanos.	tify water body and summarize rationale supporting determination:	LATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, SRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY 2H WATERS (CHECK ALL THAT APPLY): ¹⁰ which are or could be used by interstate or foreign travelers for recreational or other purposes. from which fish or shellfish are or could be taken and sold in interstate or foreign commerce. which are or could be used for industrial purposes by industries in interstate commerce. Interstate isolated waters. Explain:	 Impoundments of jurisdictional waters.⁹ As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional. □ Demonstrate that impoundment was created from "waters of the U.S.," or □ Demonstrate that water meets the criteria for one of the categories presented above (1-6), or □ Demonstrate that water is isolated with a nexus to commerce (see E below). 	Provide estimates for jurisdictional wetlands in the review area:	 Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs. Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C. 	Provide acreage estimates for jurisdictional wetlands in the review area:	Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs. Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.	Provide acreage estimates for jurisdictional wetlands in the review area:	Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:	 Wetlands directly abutting an RPW that flow directly or indirectly into TNWs. Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands. Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: 	Provide estimates for jurisdictional waters within the review area (check all that apply): Tributary waters: linear feet width (ft). Other non-wedand waters: acres. Identify type(s) of waters: .	Non-RPWs ⁸ that flow directly or indirectly into TNWs. Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.	 Provide estimates for jurisdictional waters in the review area (check all that apply): Tributary waters: Interact feet width (ft). Other non-wetland waters: Acres. Identify type(s) of waters: Interaction.
