## New England District, U.S. Army Corps of Engineers, Regulatory Division Openness Ratio Spreadsheet

- Openness Ratio (OR) is calculated by dividing a culvert's cross-sectional area by its length: OR = x-sec area $\div$ length
- Along with other criteria, the MA PGP, General Condition 21, states that to qualify for the Category 1 (non-reporting):

1. New permanent stream crossings must have an $O R \geq .25$

$$
\mathrm{OR}=.25=\frac{(x-\mathrm{sec} \text { area })}{\text { culvert length }} \quad \text { or } \quad \mathrm{OR}=.25=\frac{[(\mathrm{x}-\mathrm{sec} \text { culvert area pre-embed })-\mathrm{embedded} \text { area] }]}{\text { culvert length }}
$$

2. Round culverts must be embedded at least $25 \%$

- The chart below provides the diameter needed to meet the .25 OR for various culvert lengths, accounting for the embedded area, when embedding $25 \%$. All calculations must be done in meters. The conversion to feet is provided.
- The Corps uses the .25 OR as a guide for Category 2 projects reviews.

Derivation

1. The MA PGP, Category 1 requires:

* $25 \%$ culvert embedment ( $=.25 \times$ culvert diameter)
*. 25 openness ratio

2. Embedded area calculated as follows:

Notes:

* $a$ is in radians
* $a=60^{\circ}=1.05$ radians, if $h=.25 \mathrm{D}$
* $\mathrm{A}_{1}=$ embedded area

3. $\mathrm{OR}=.25=[(x$-sec culvert area pre-embed $)-$ embedded areal culvert length
where:

* $x$-sec area $=\Pi D^{2} / 4$
* embedded area for $25 \%$ embed $=.62 D^{2} / 4=\left(A_{1}\right)$
* culvert length $=\mathrm{L}$

Therefore:

$$
.25=\frac{\square \mathrm{D}^{2} / 4-.62 \mathrm{D}^{2} / 4}{\mathrm{~L}}
$$

or
$\mathrm{D}=.63 \mathrm{~L}^{1 / 2}$
