

EXECUTIVE SUMMARY

Because of funding and program definition requirements the FY80 DAMOS program was delayed until March 24, 1980. At that time the initial winter surveys were undertaken starting with the New London and Central Long Island Sound Disposal Sites from March 24 to April 2, 1980 and the Portland Disposal Site from April 8 - 11, 1980. The Portland survey was conducted in conjunction with Innerstate Electronics Corporation to assist in the development of an Environmental Impact Statement for designation of the site as a regional disposal site by EPA.

This progress report will discuss the preliminary results of the March and April surveys, the overall progress that has been made on major portions of the program during the months prior to FY80 operations and future plans and schedules through the remainder of the year.
